Pathological Anatomy,
Clinical Pathological Anatomy*

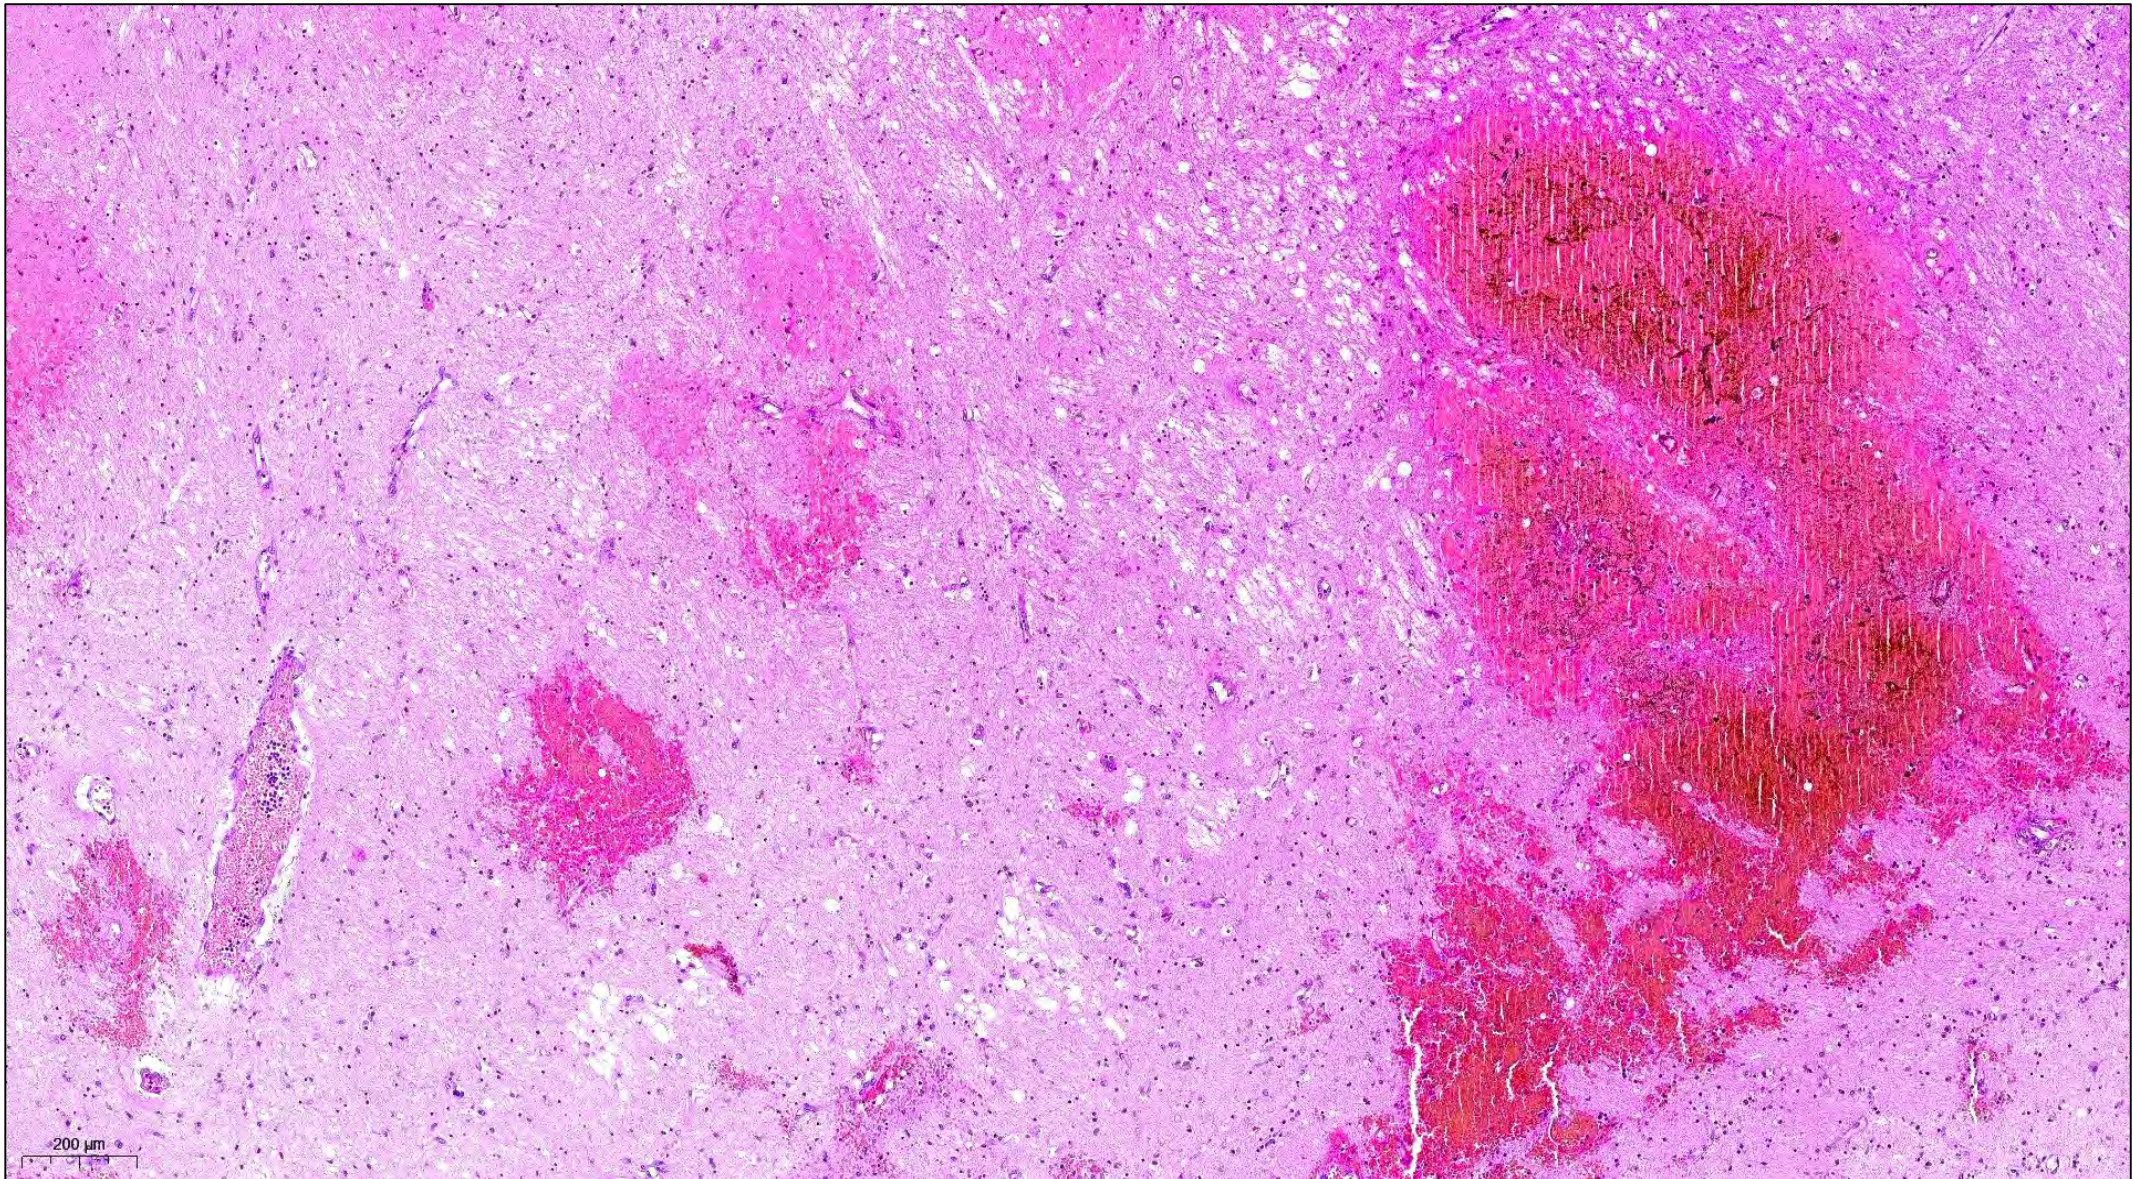

Nutmeg liver

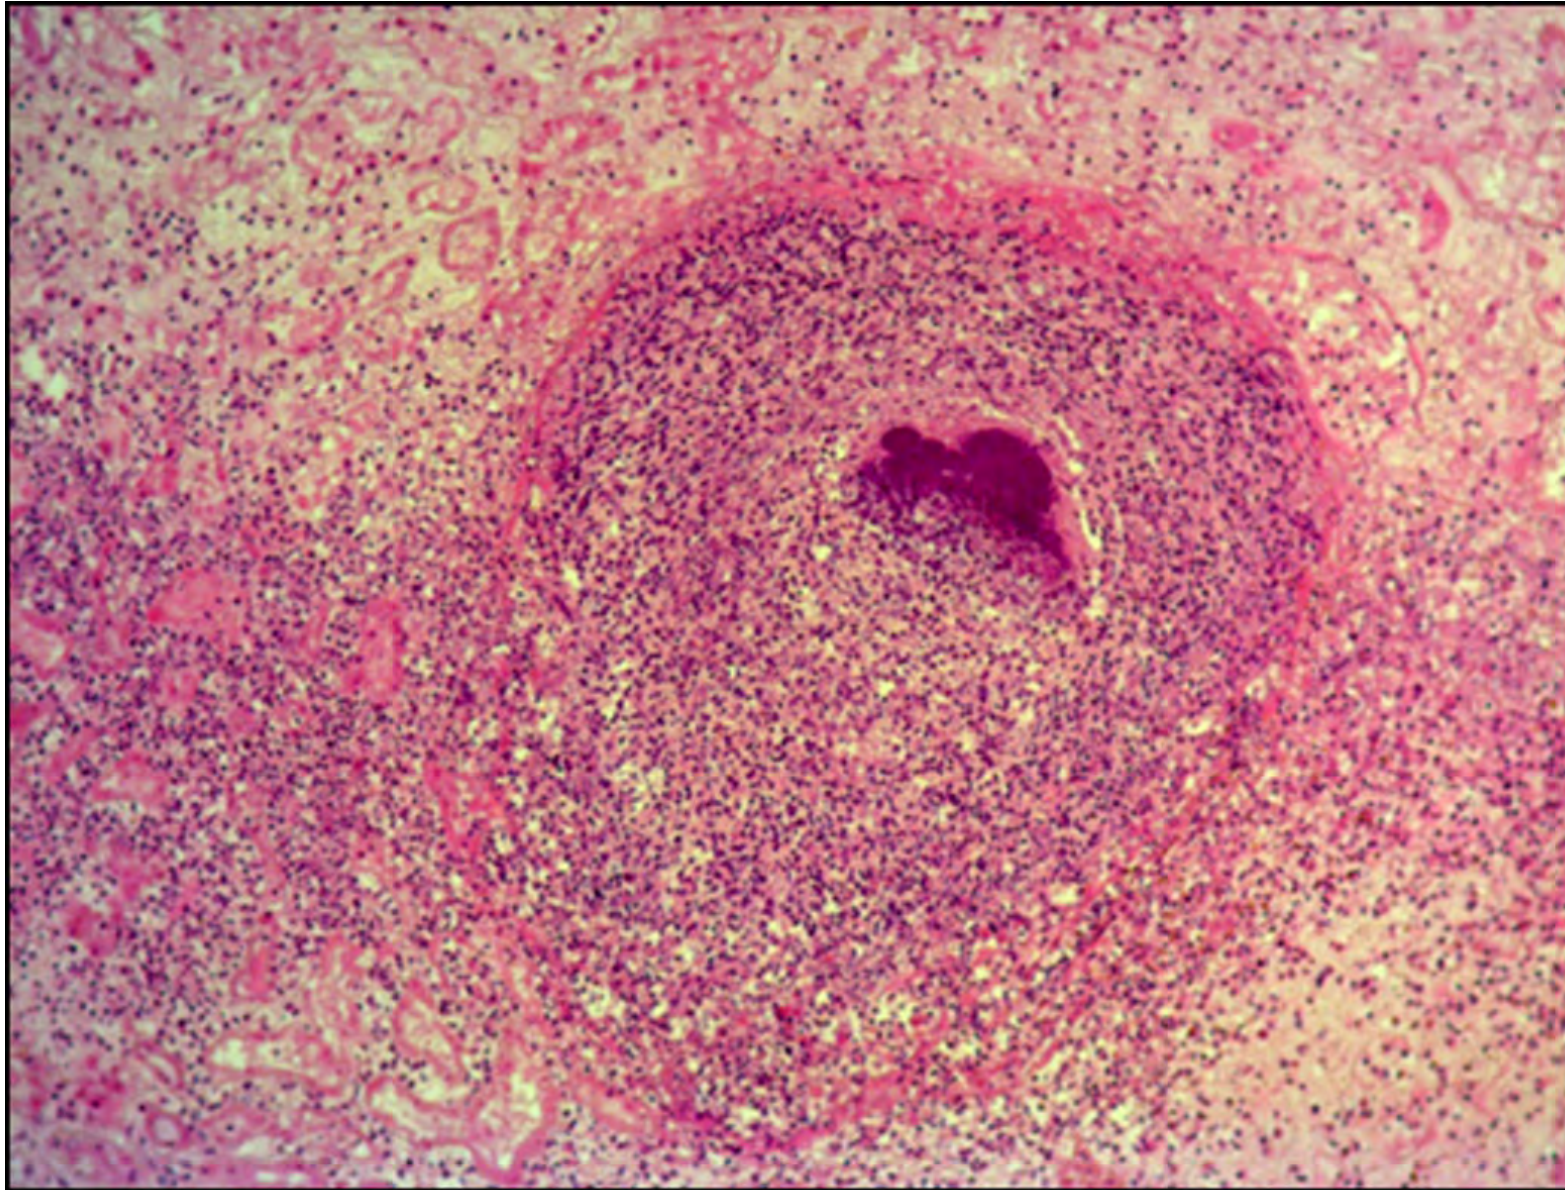

Brown induration of the lungs

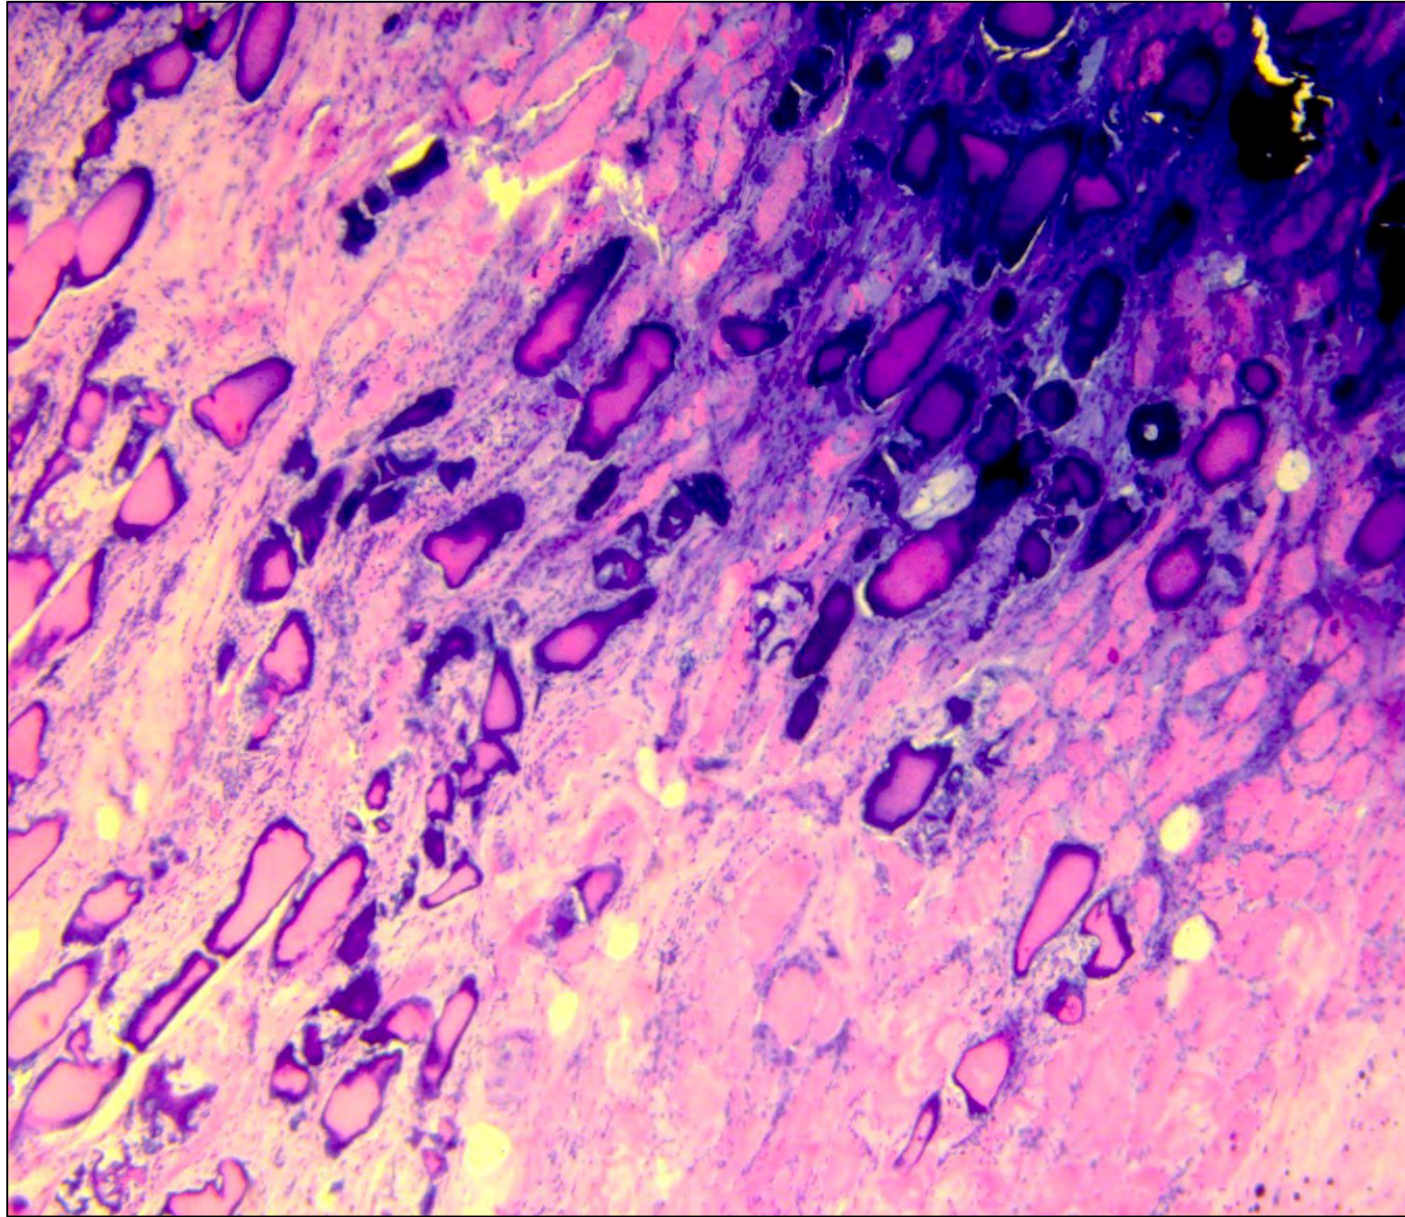

Mixed thrombus with the start of organization

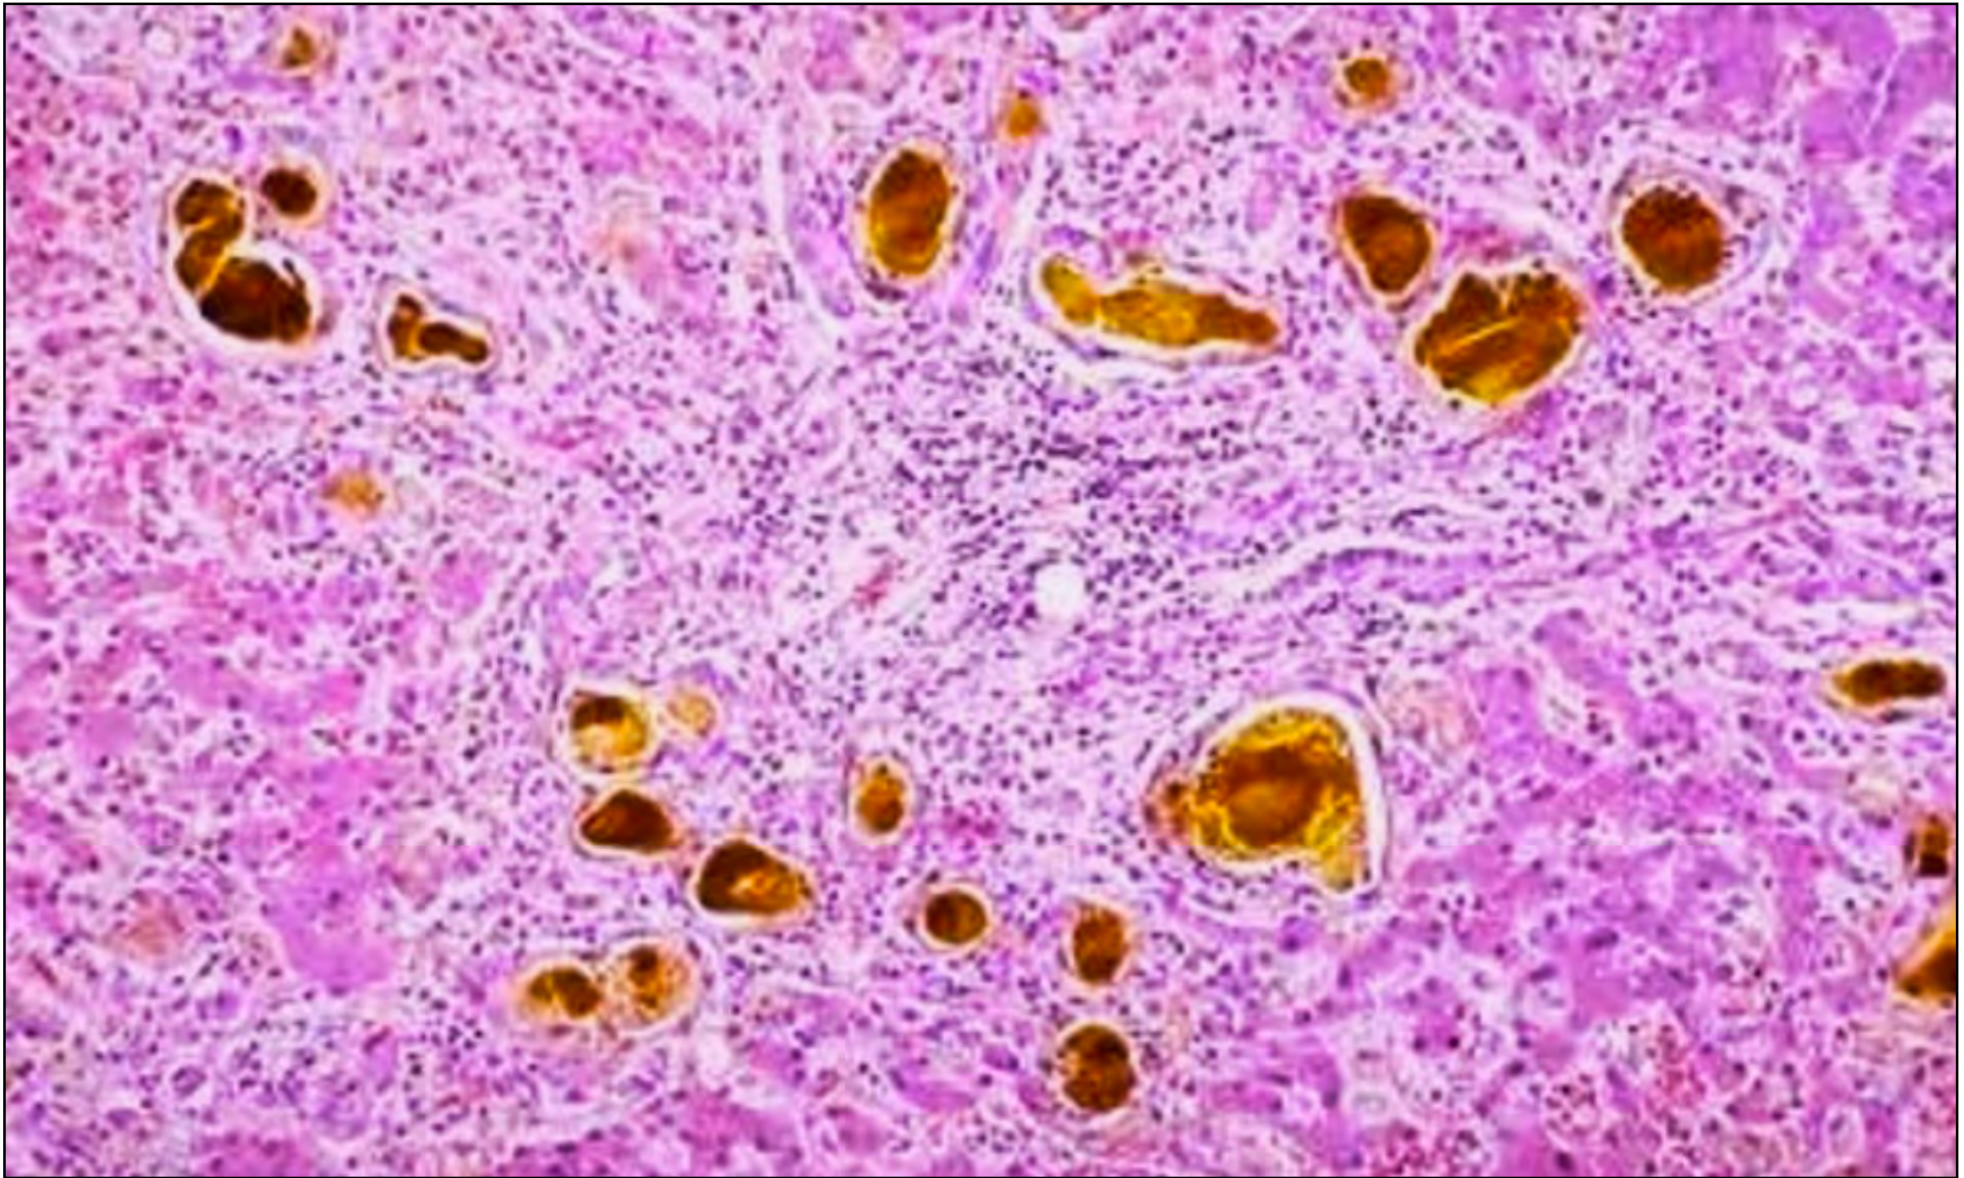

Cerebral hemorrhage by hemorrhagic infiltration

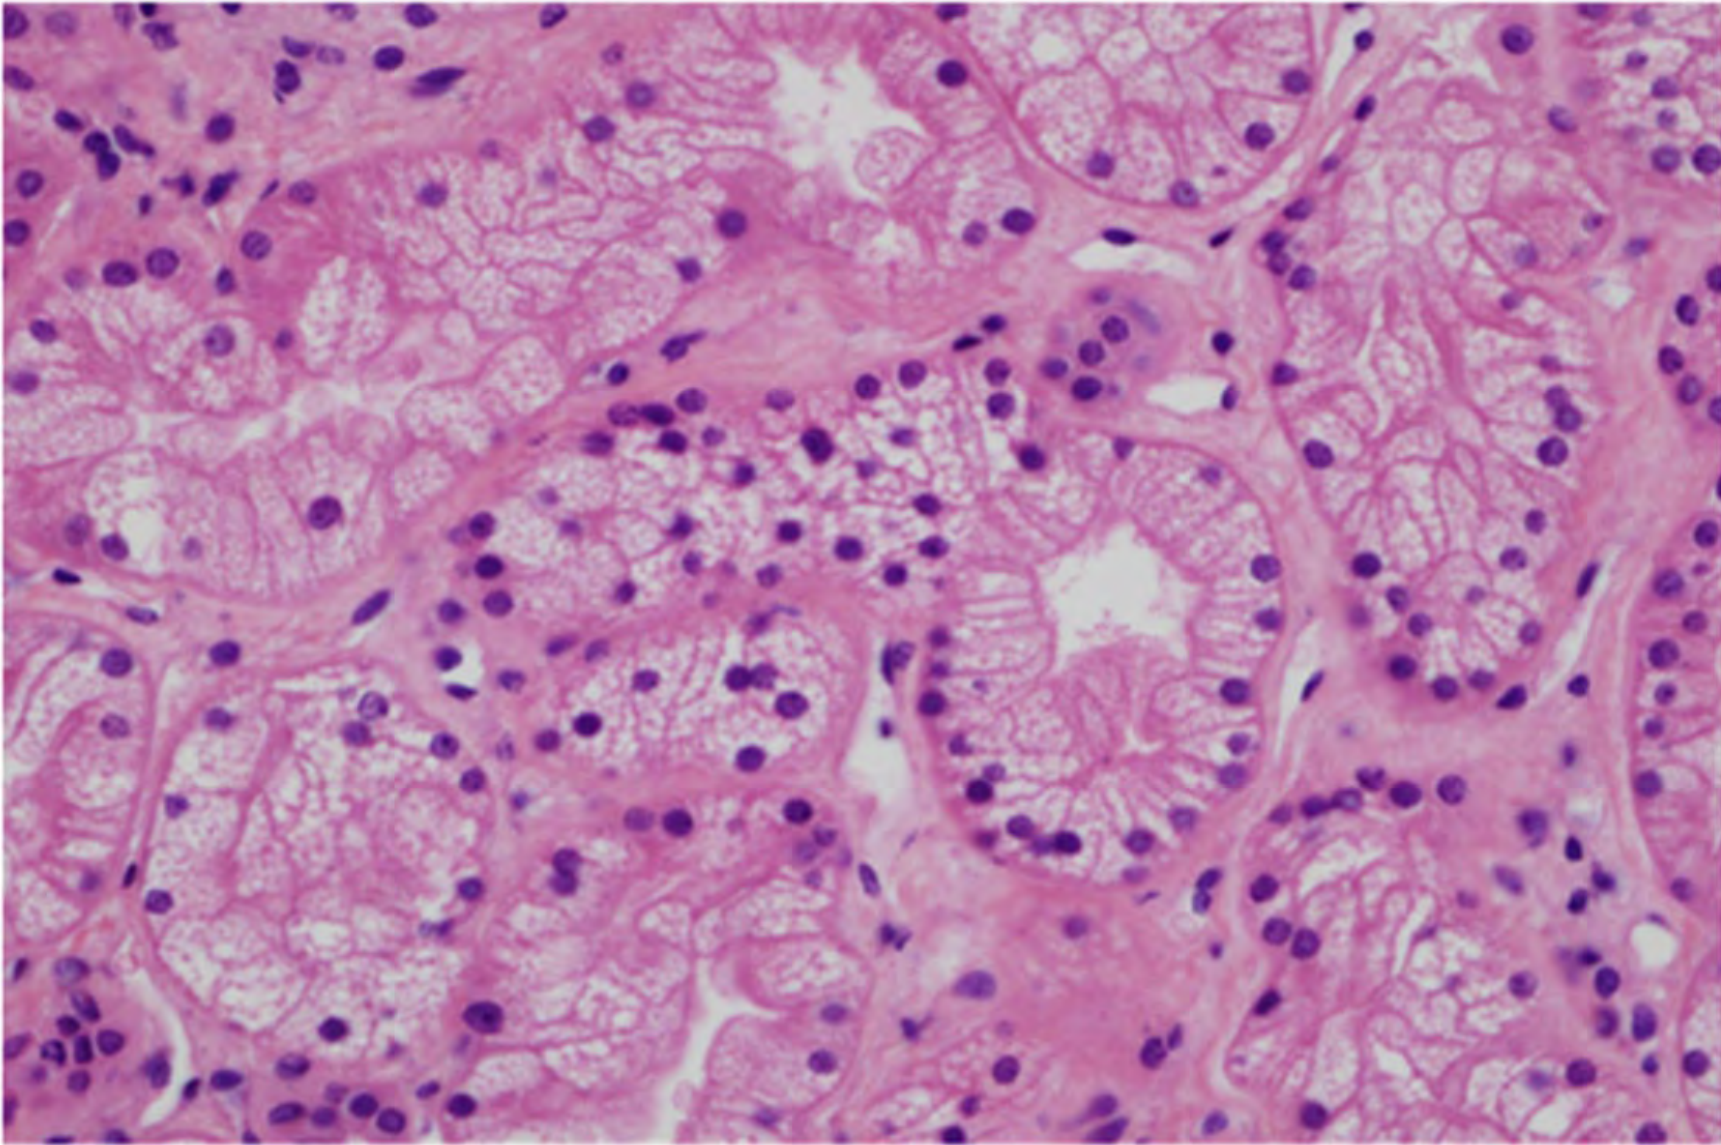

Microbial embolism of the kidney

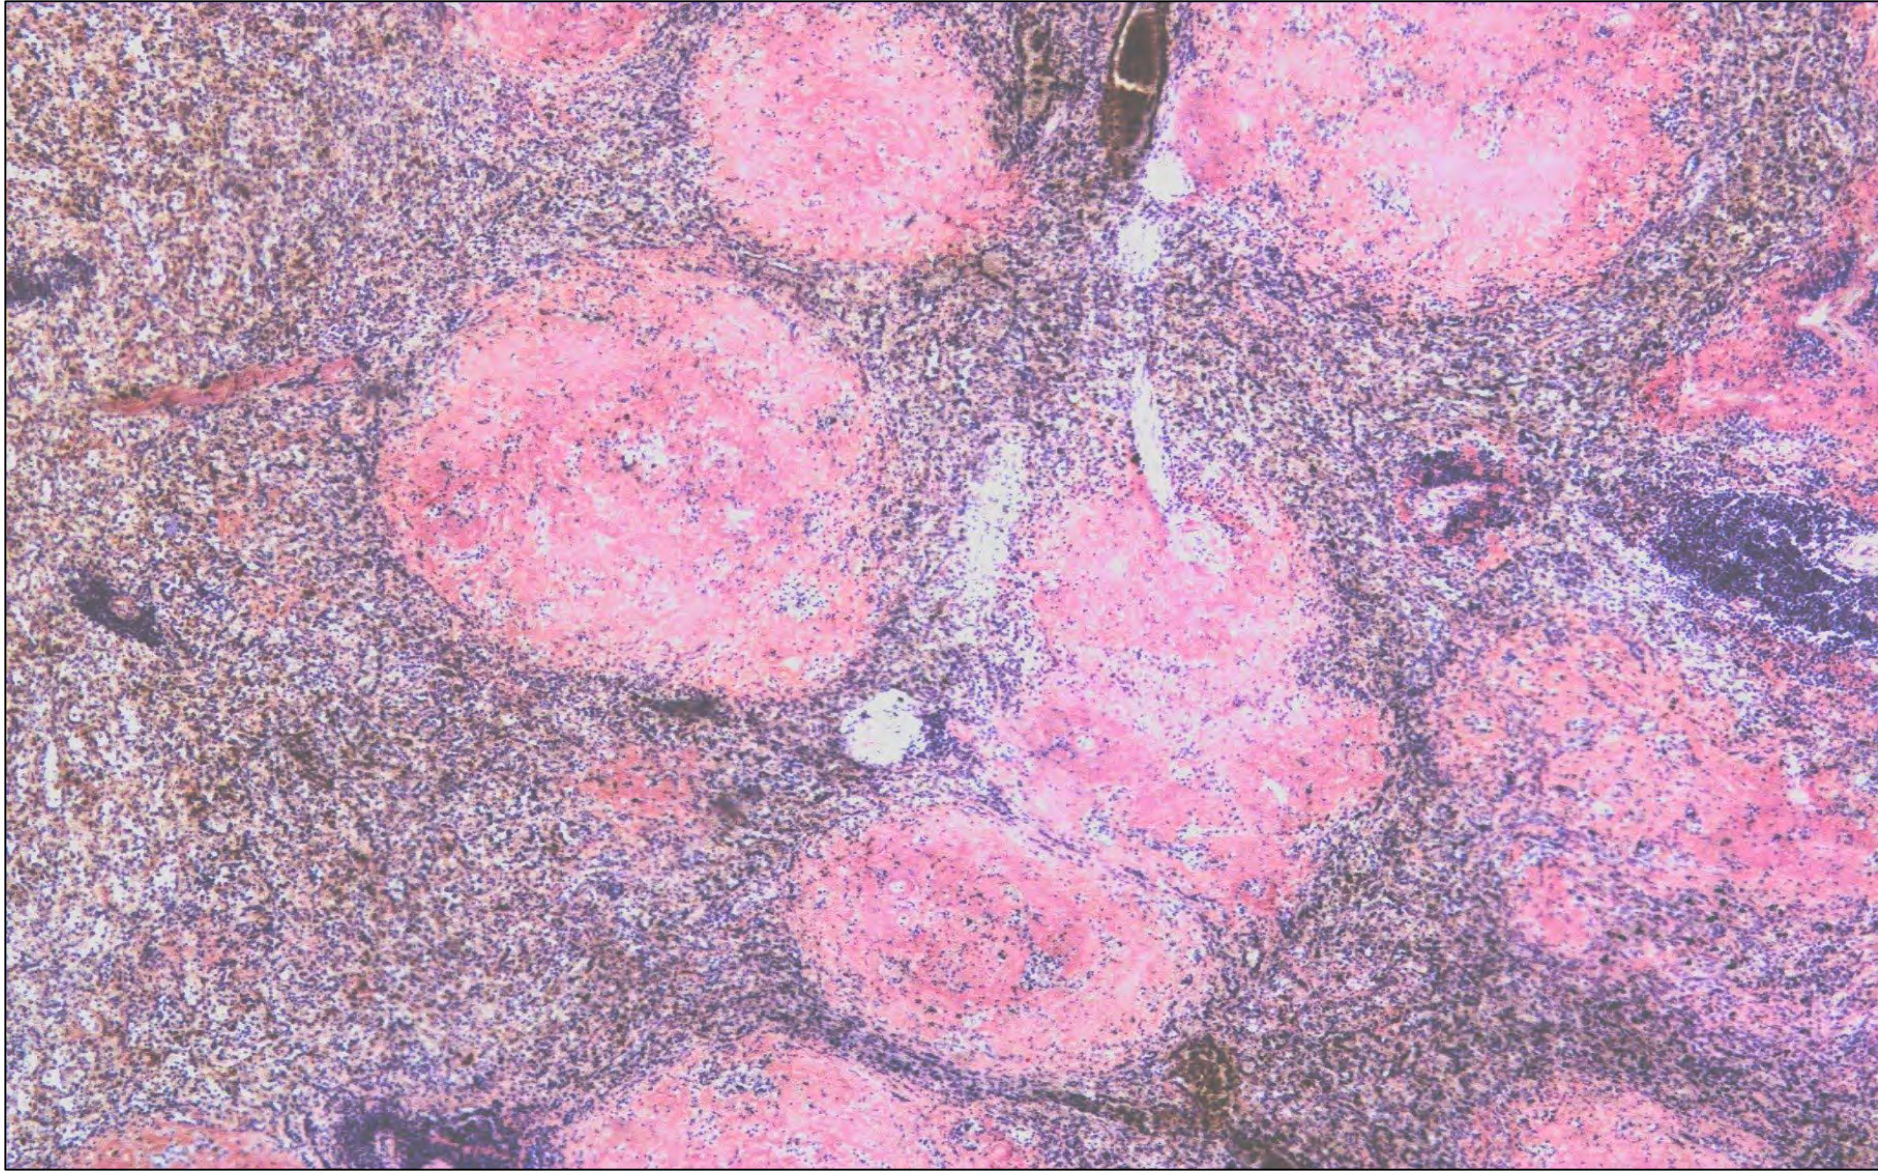

Skeletal muscle necrosis with petrification

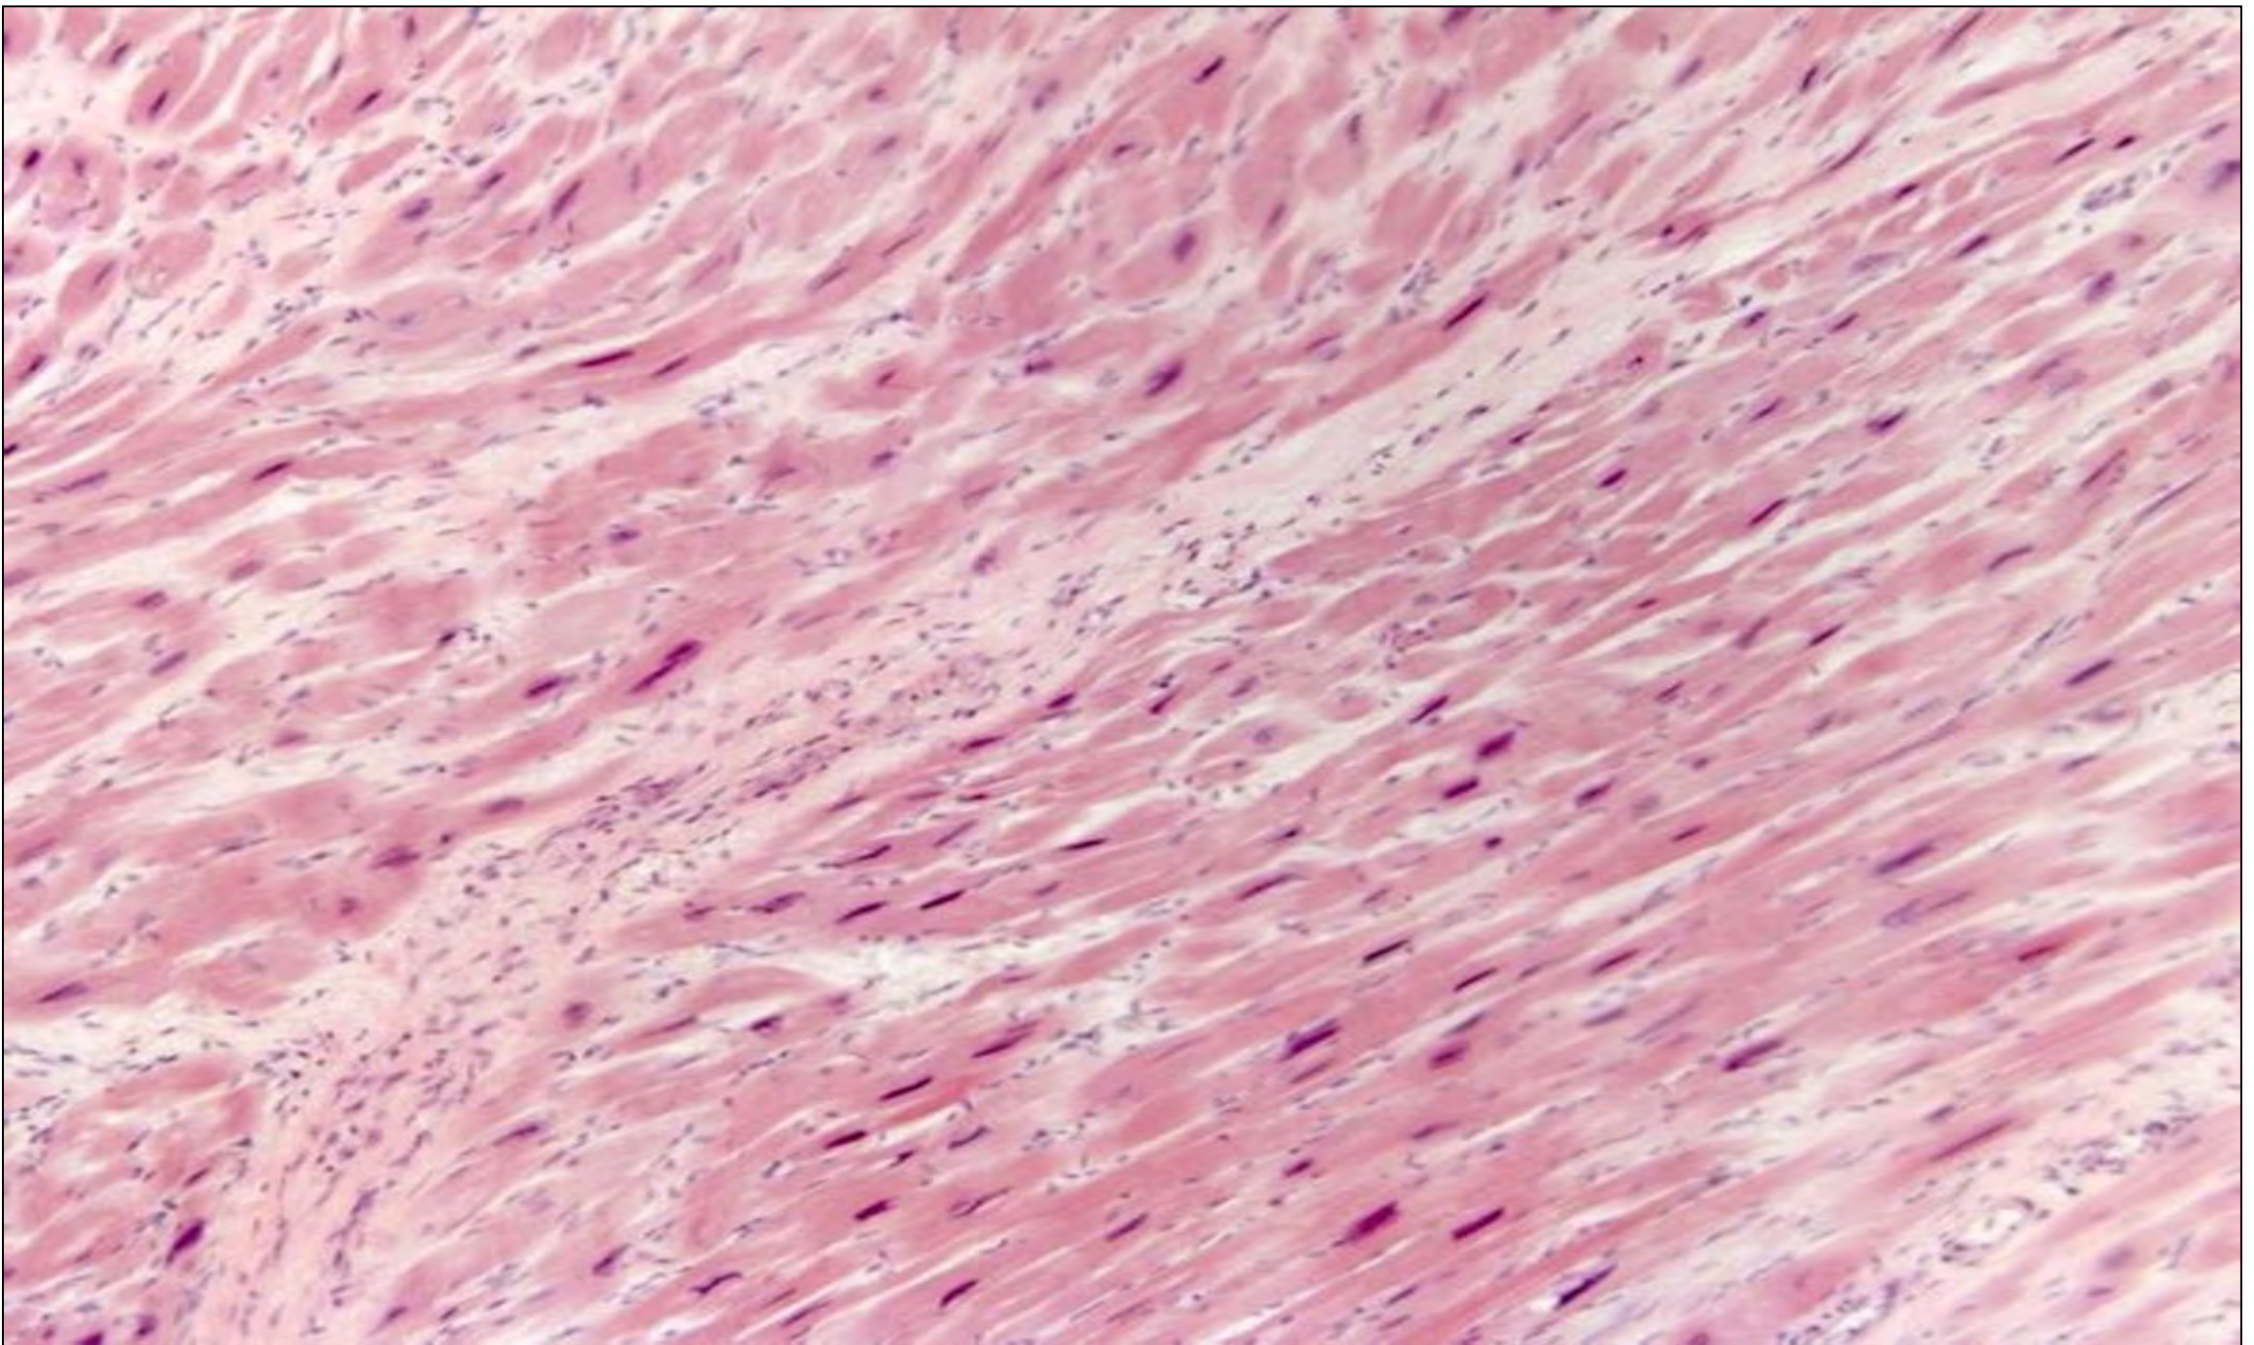

Liver in obstructive jaundice

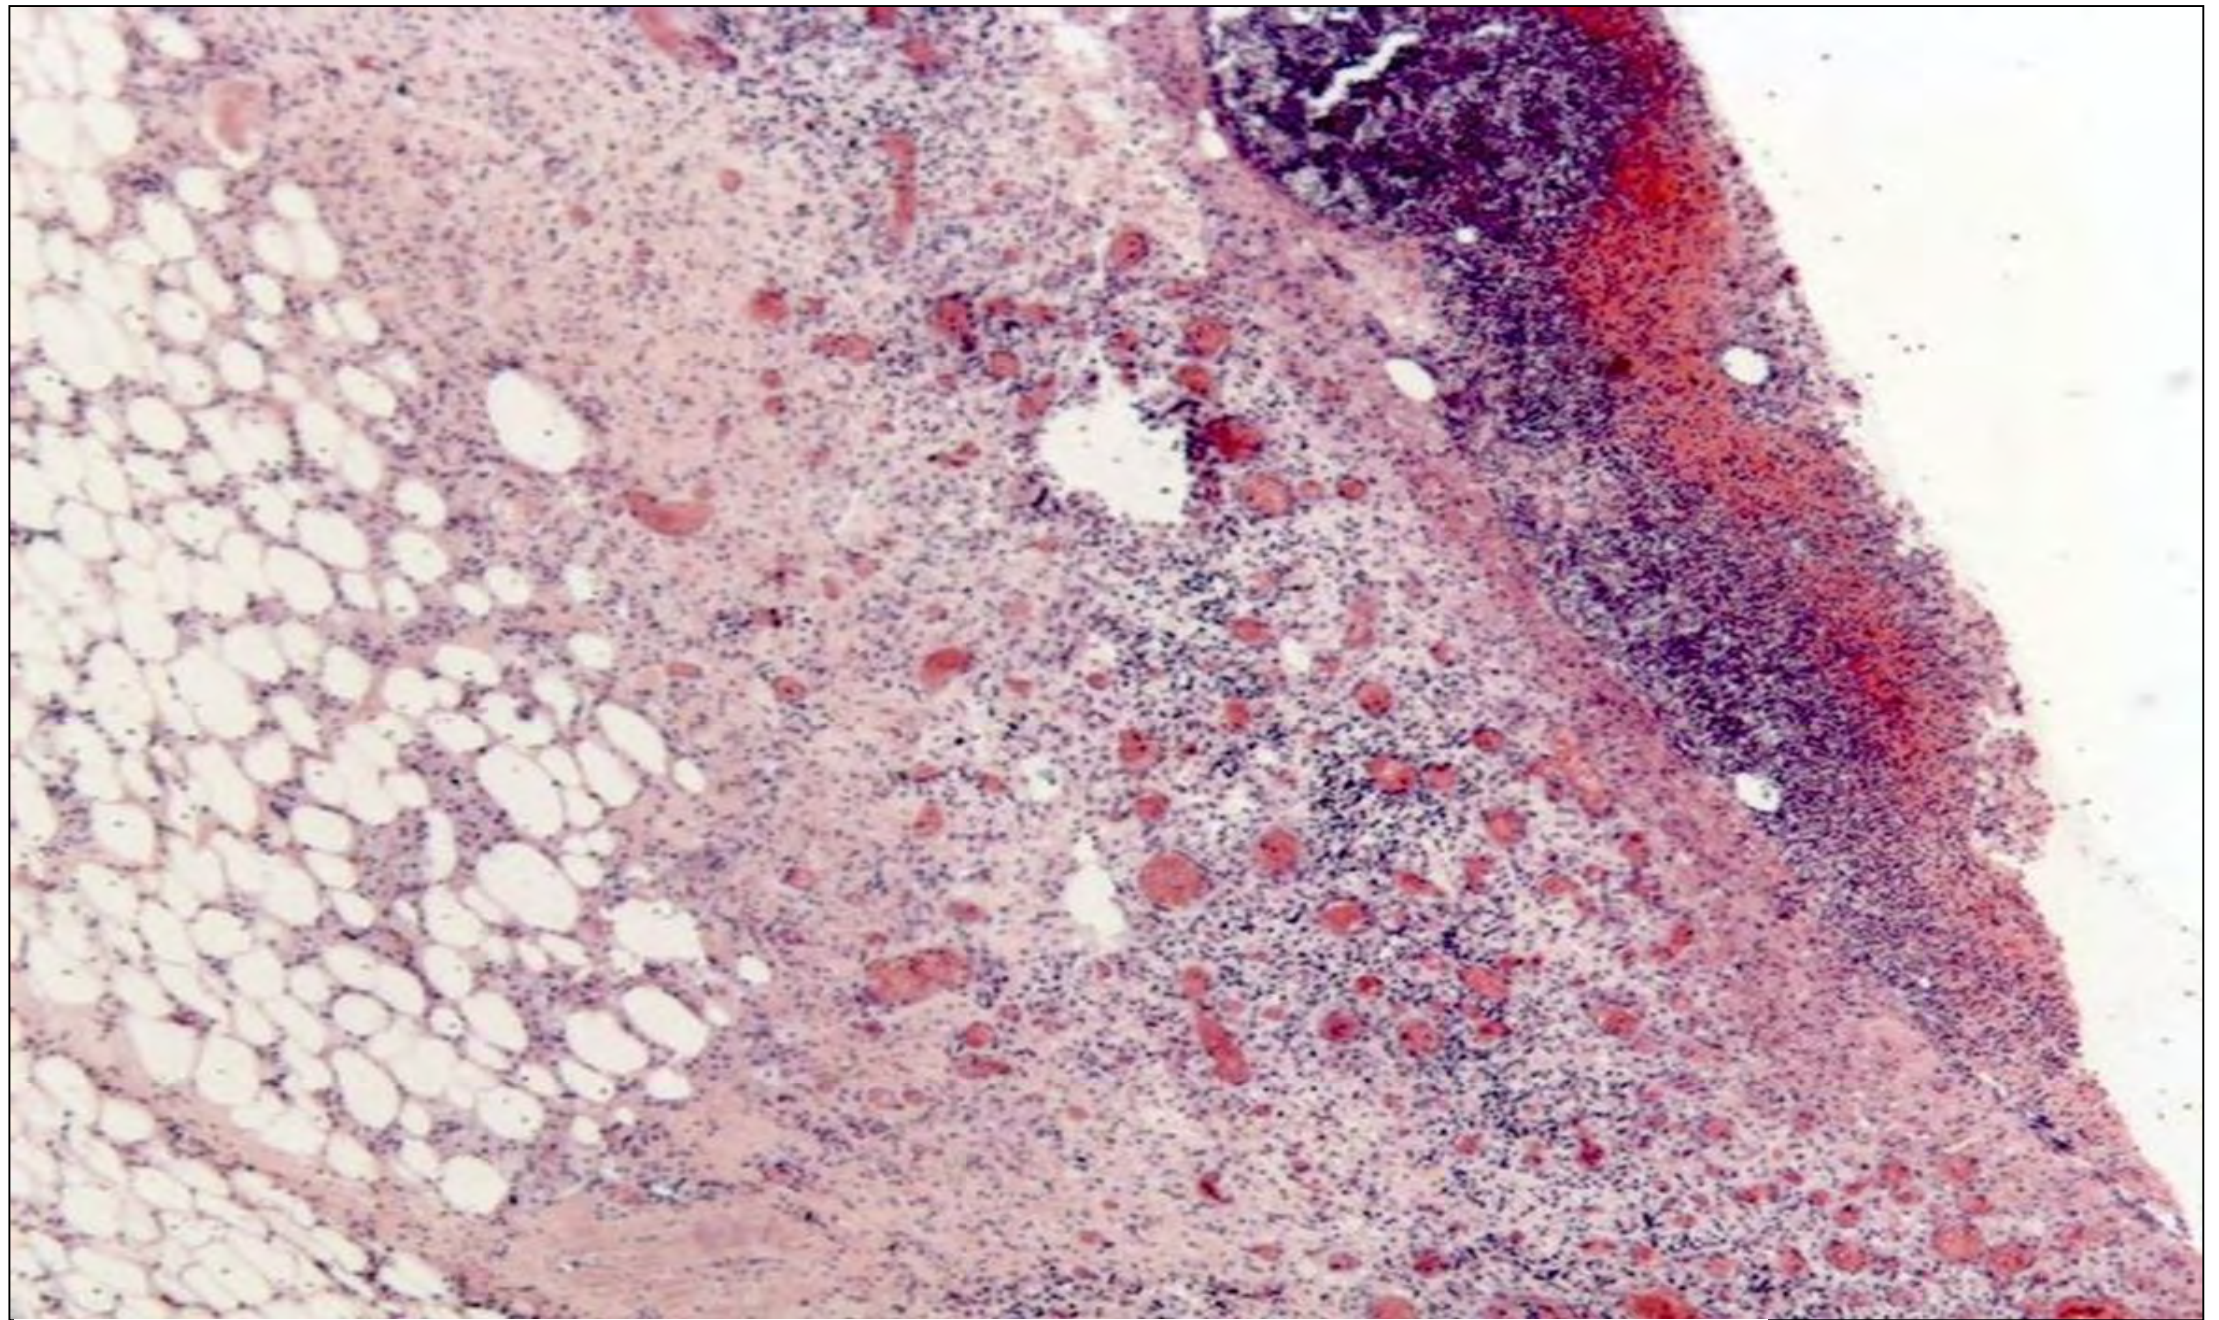

Hydropic dystrophy

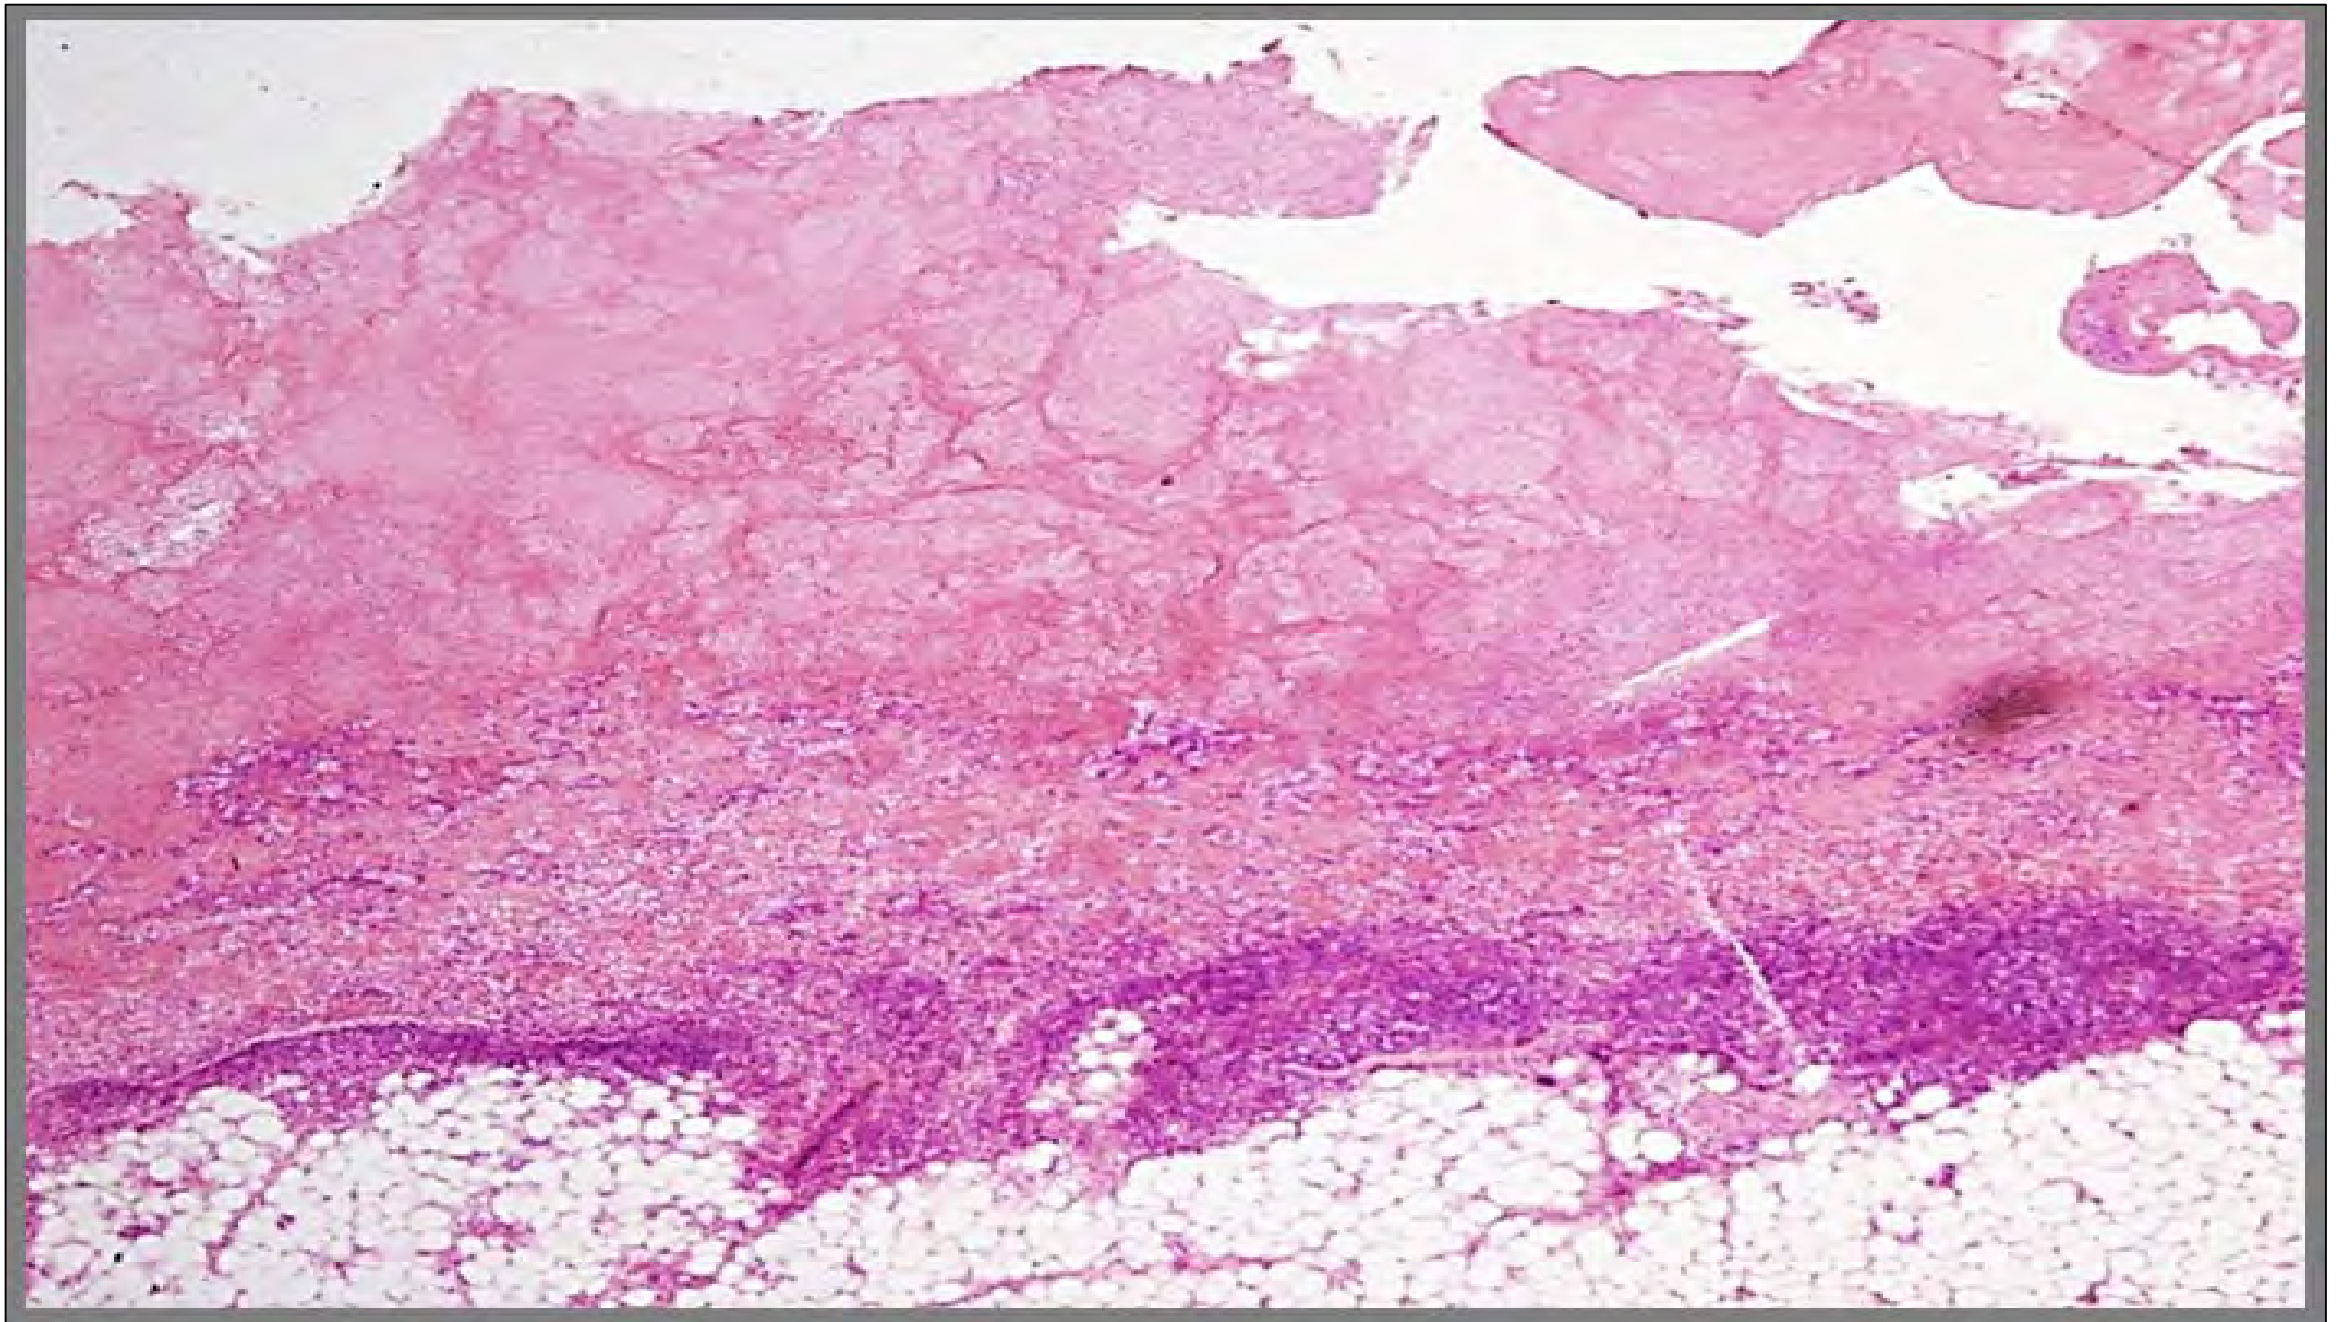

Amyloidosis of the spleen follicles

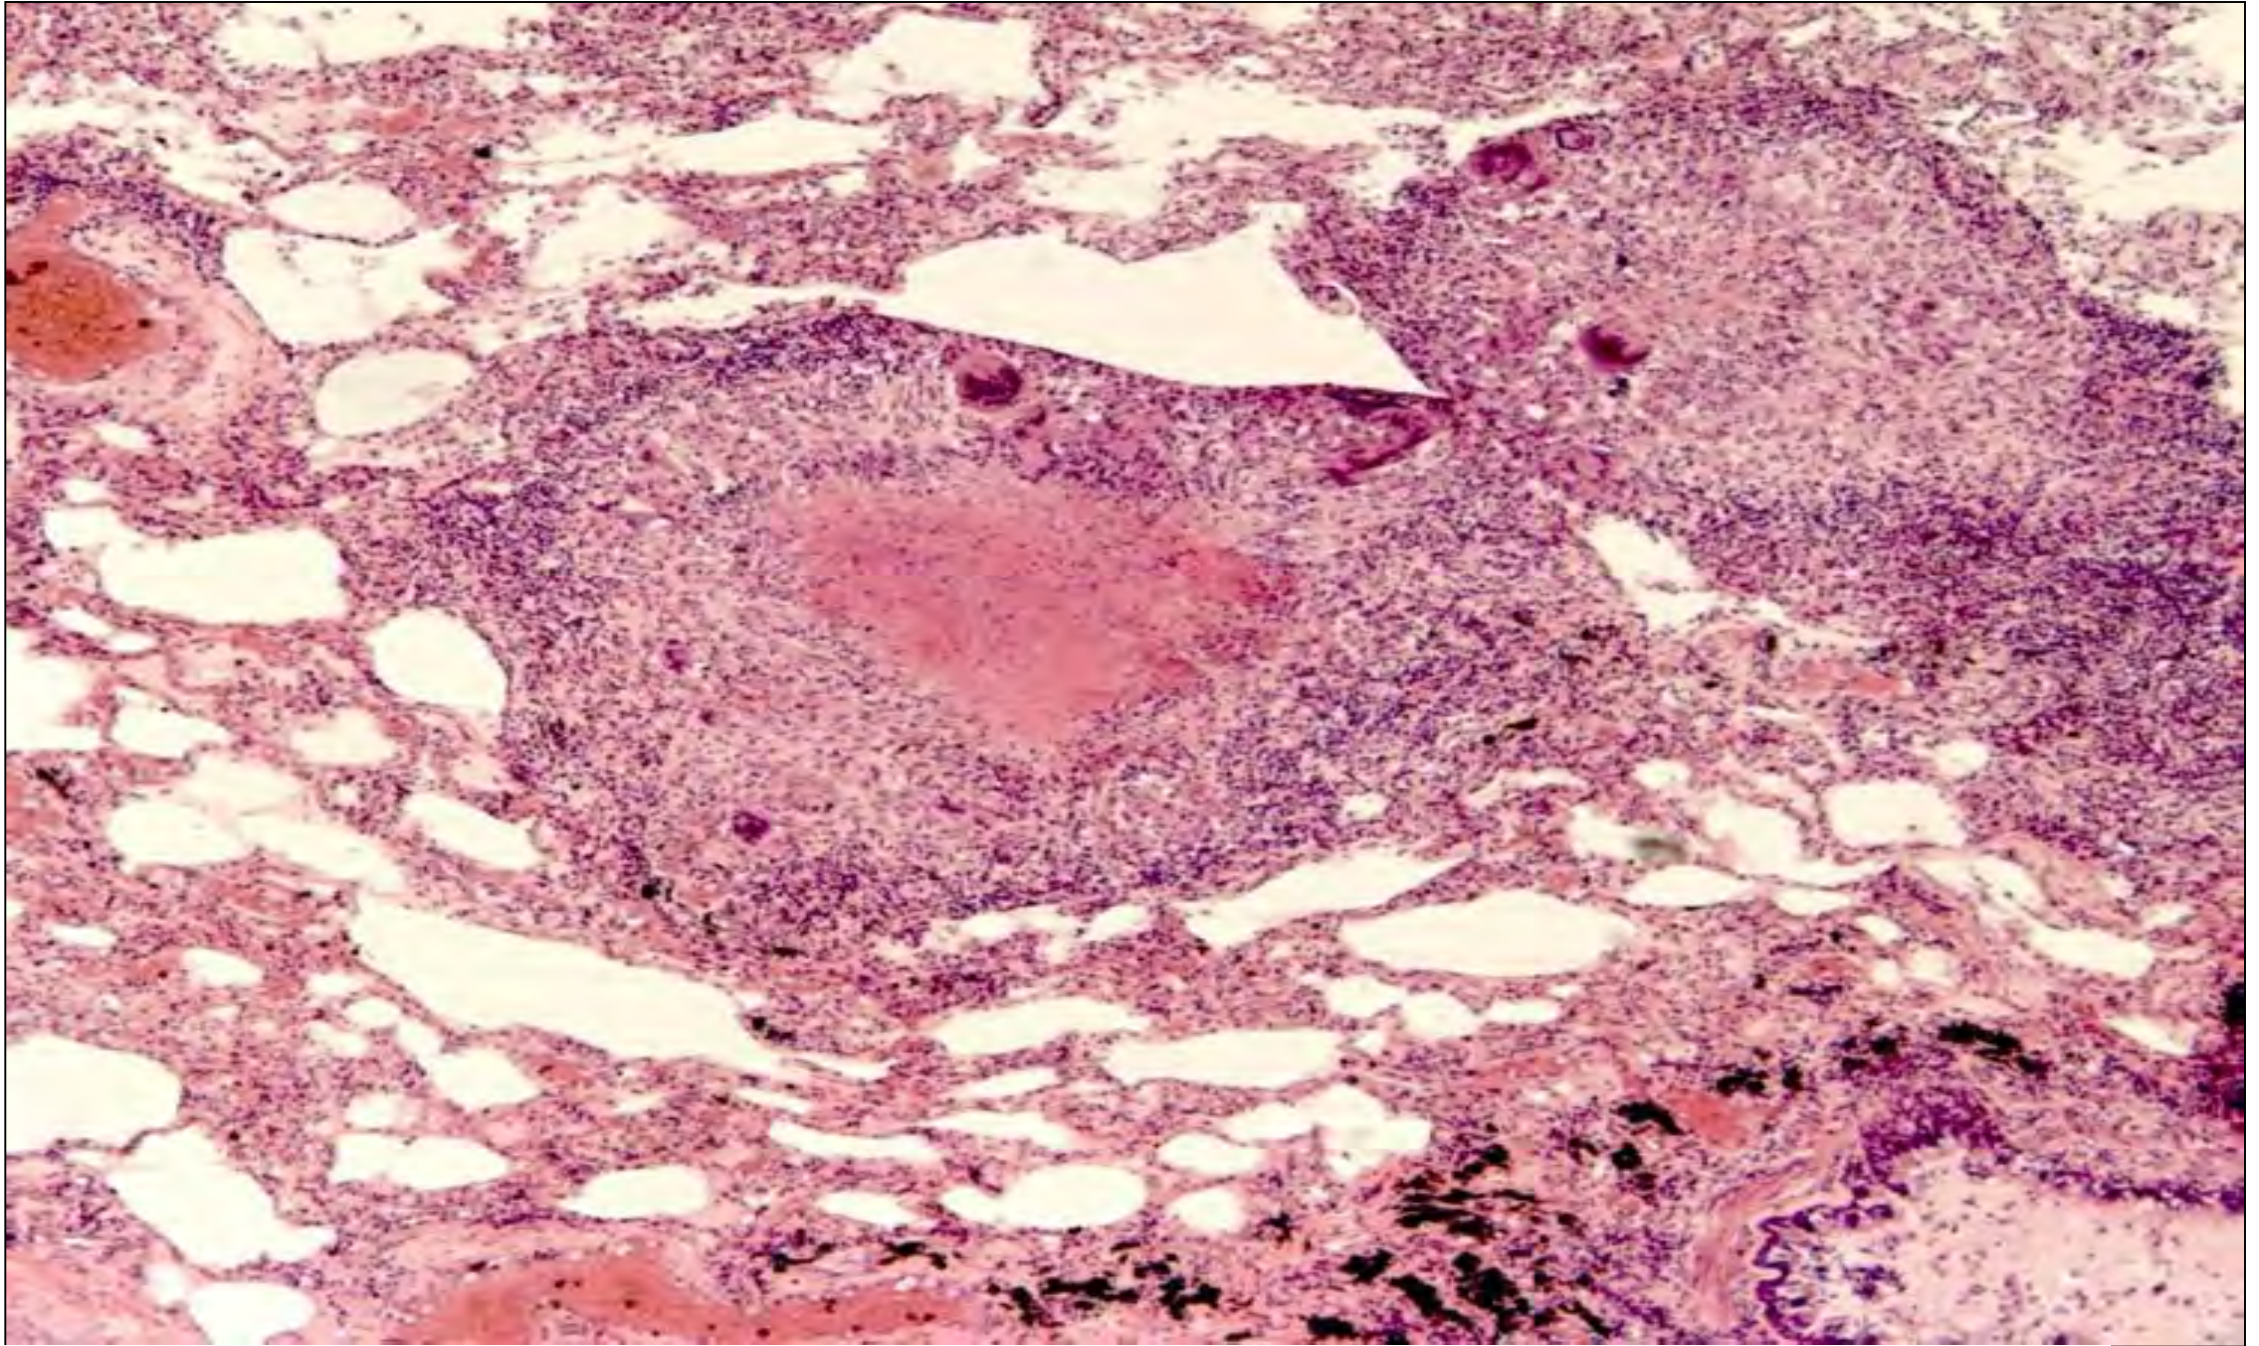

Myocardial hypertrophy

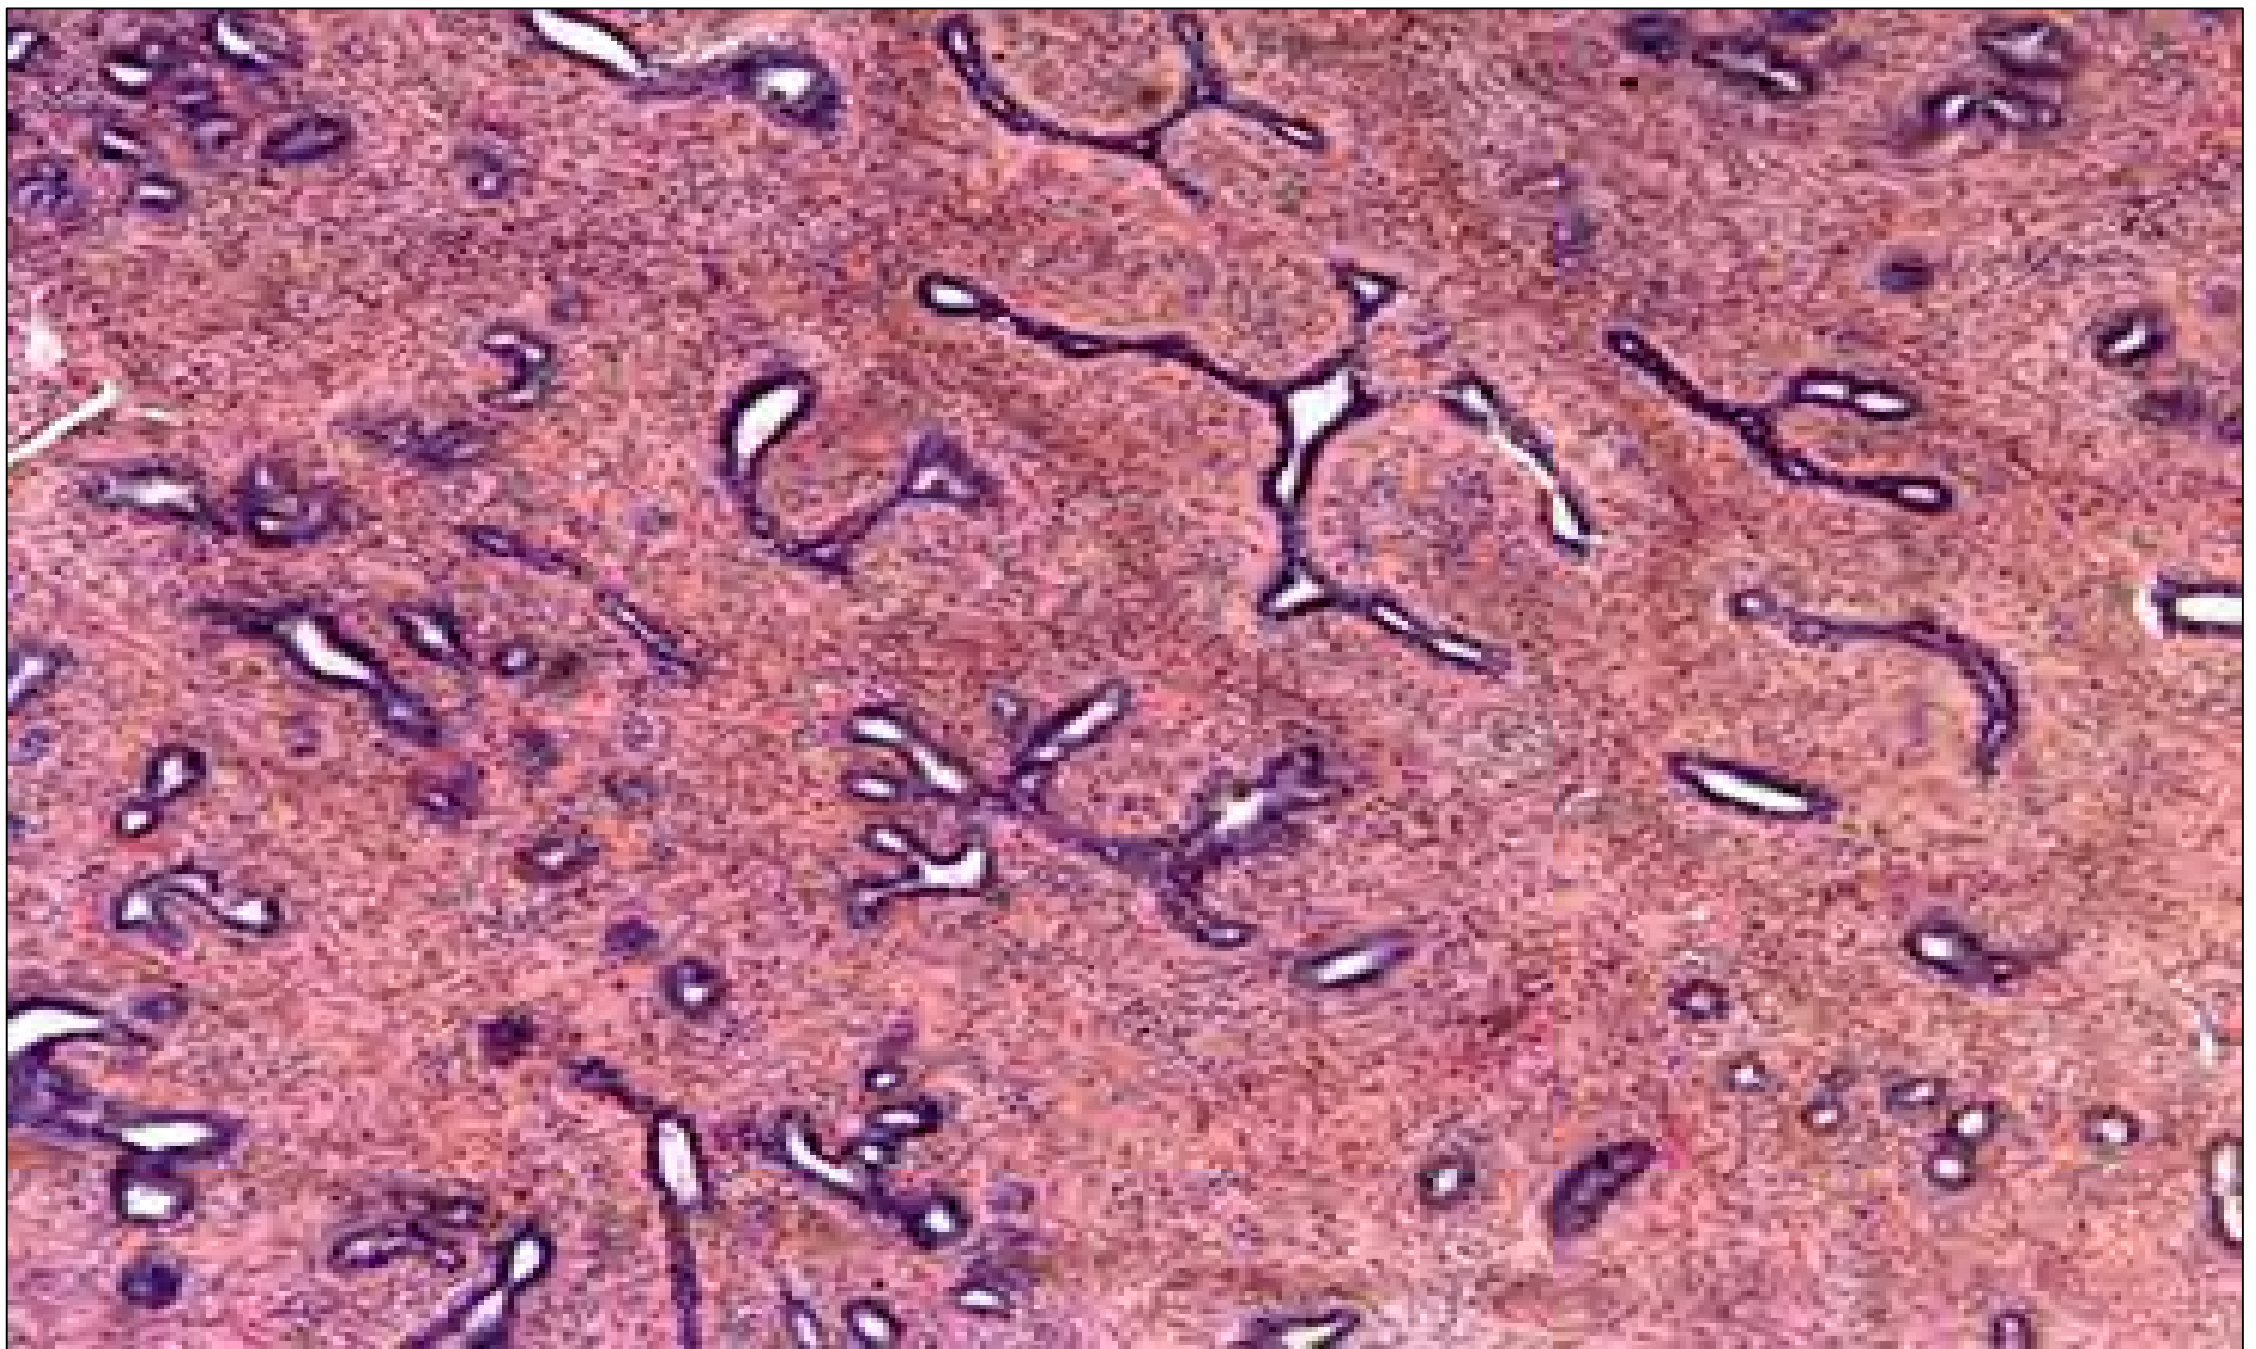

Granulation Tissue

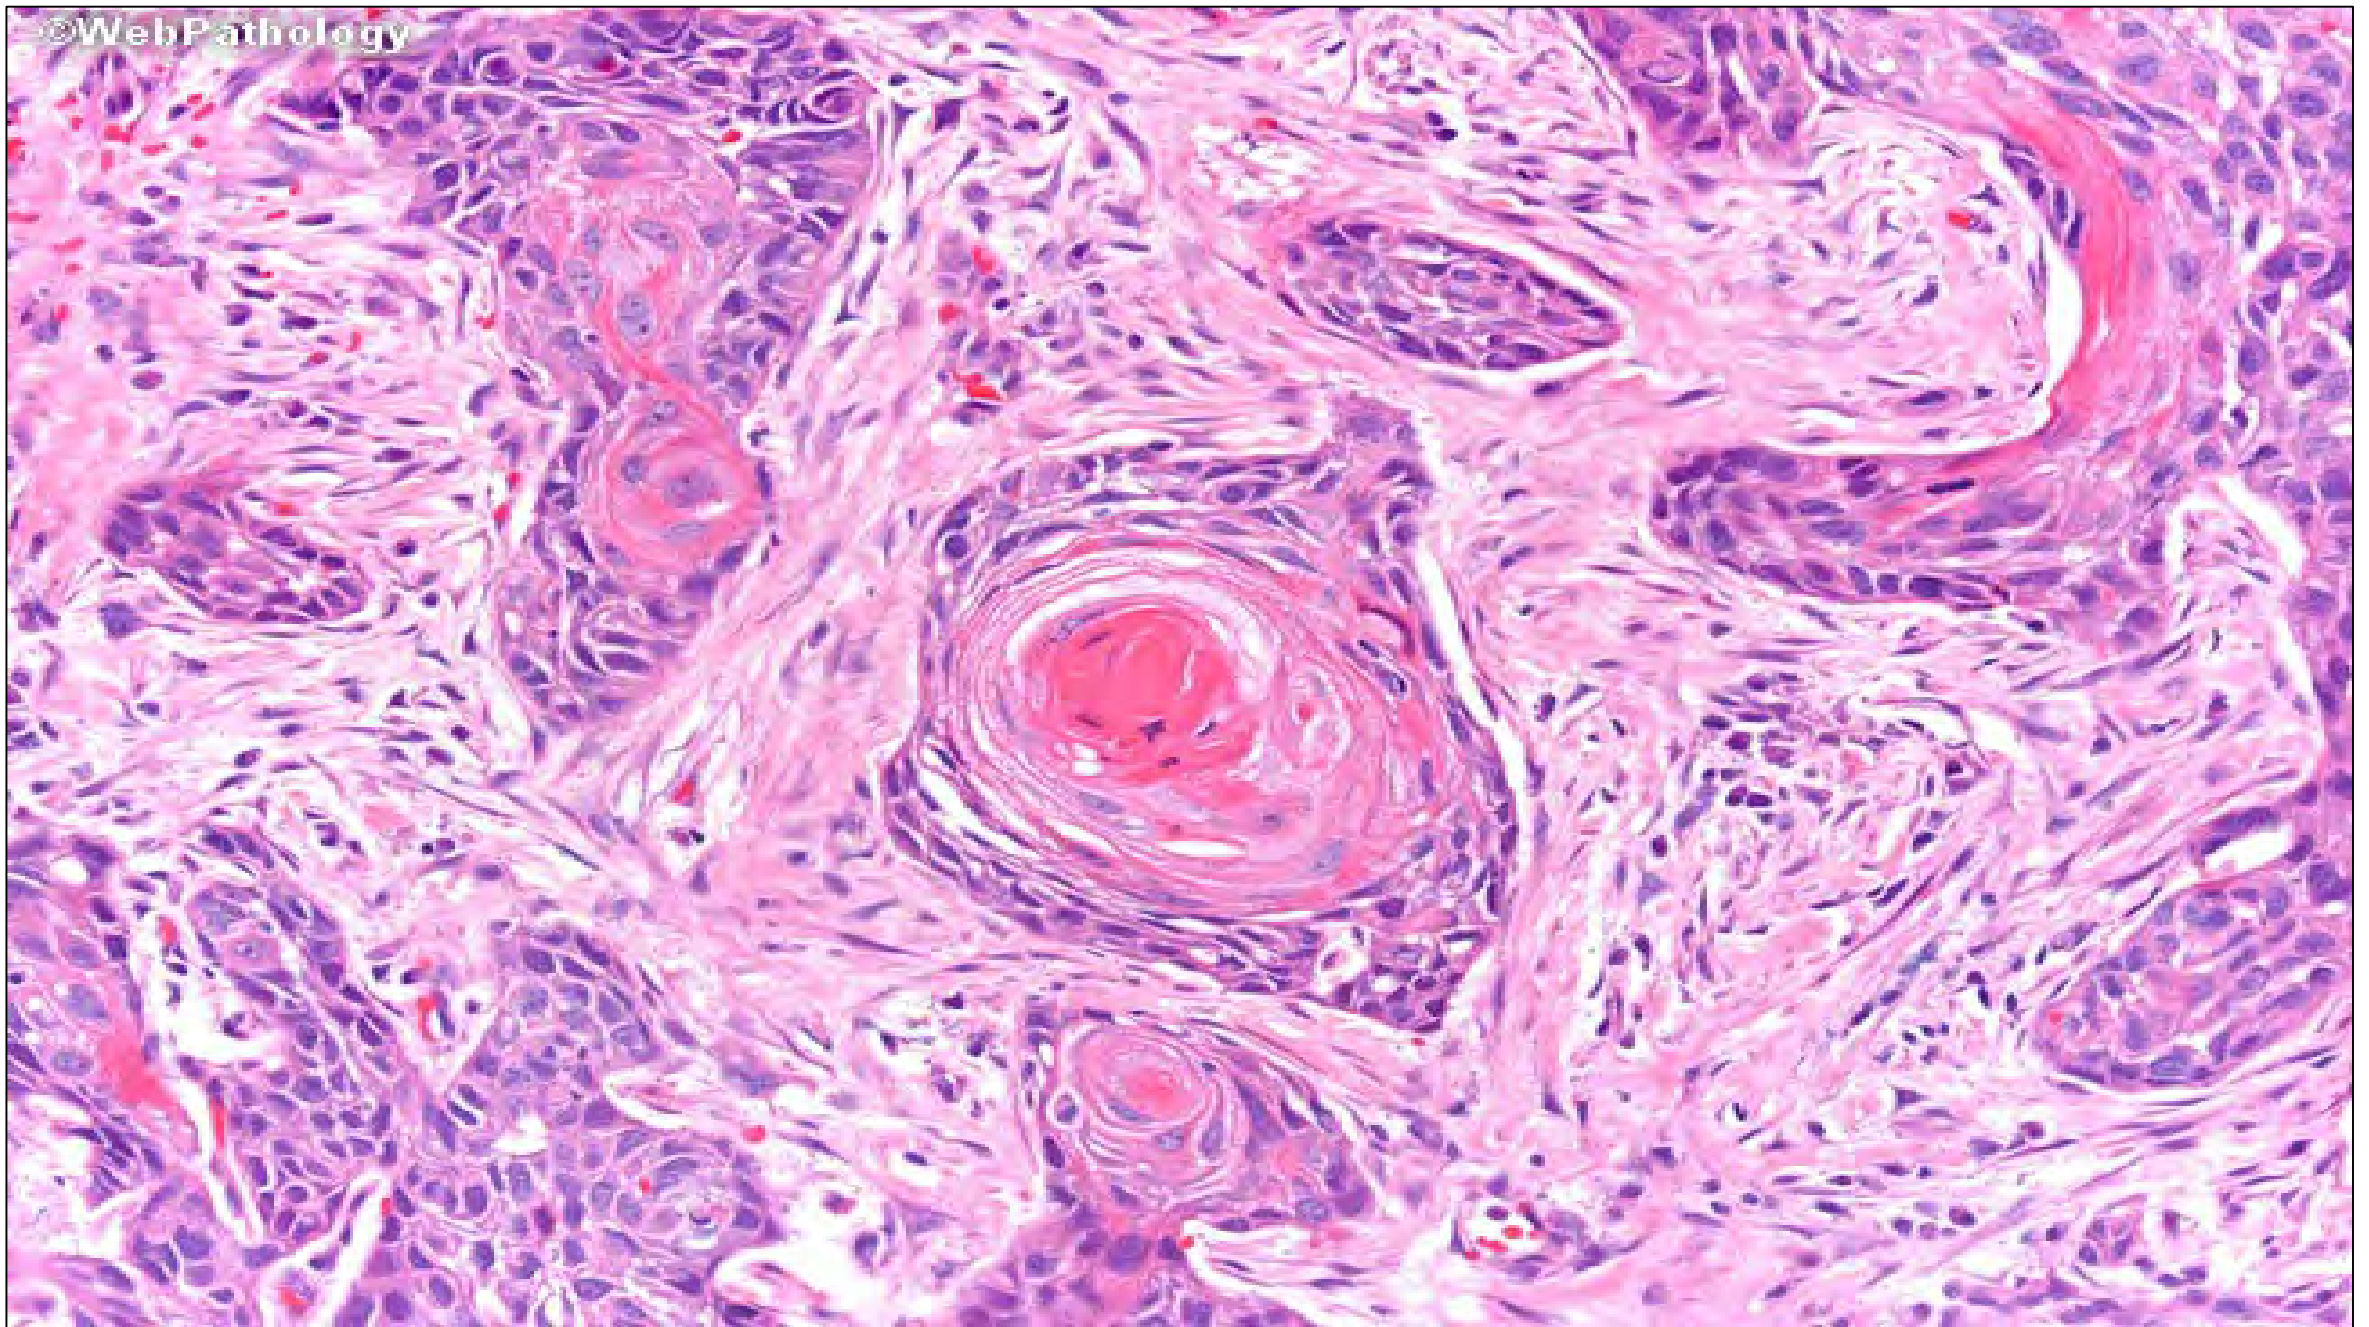

Fibrinous pericarditis

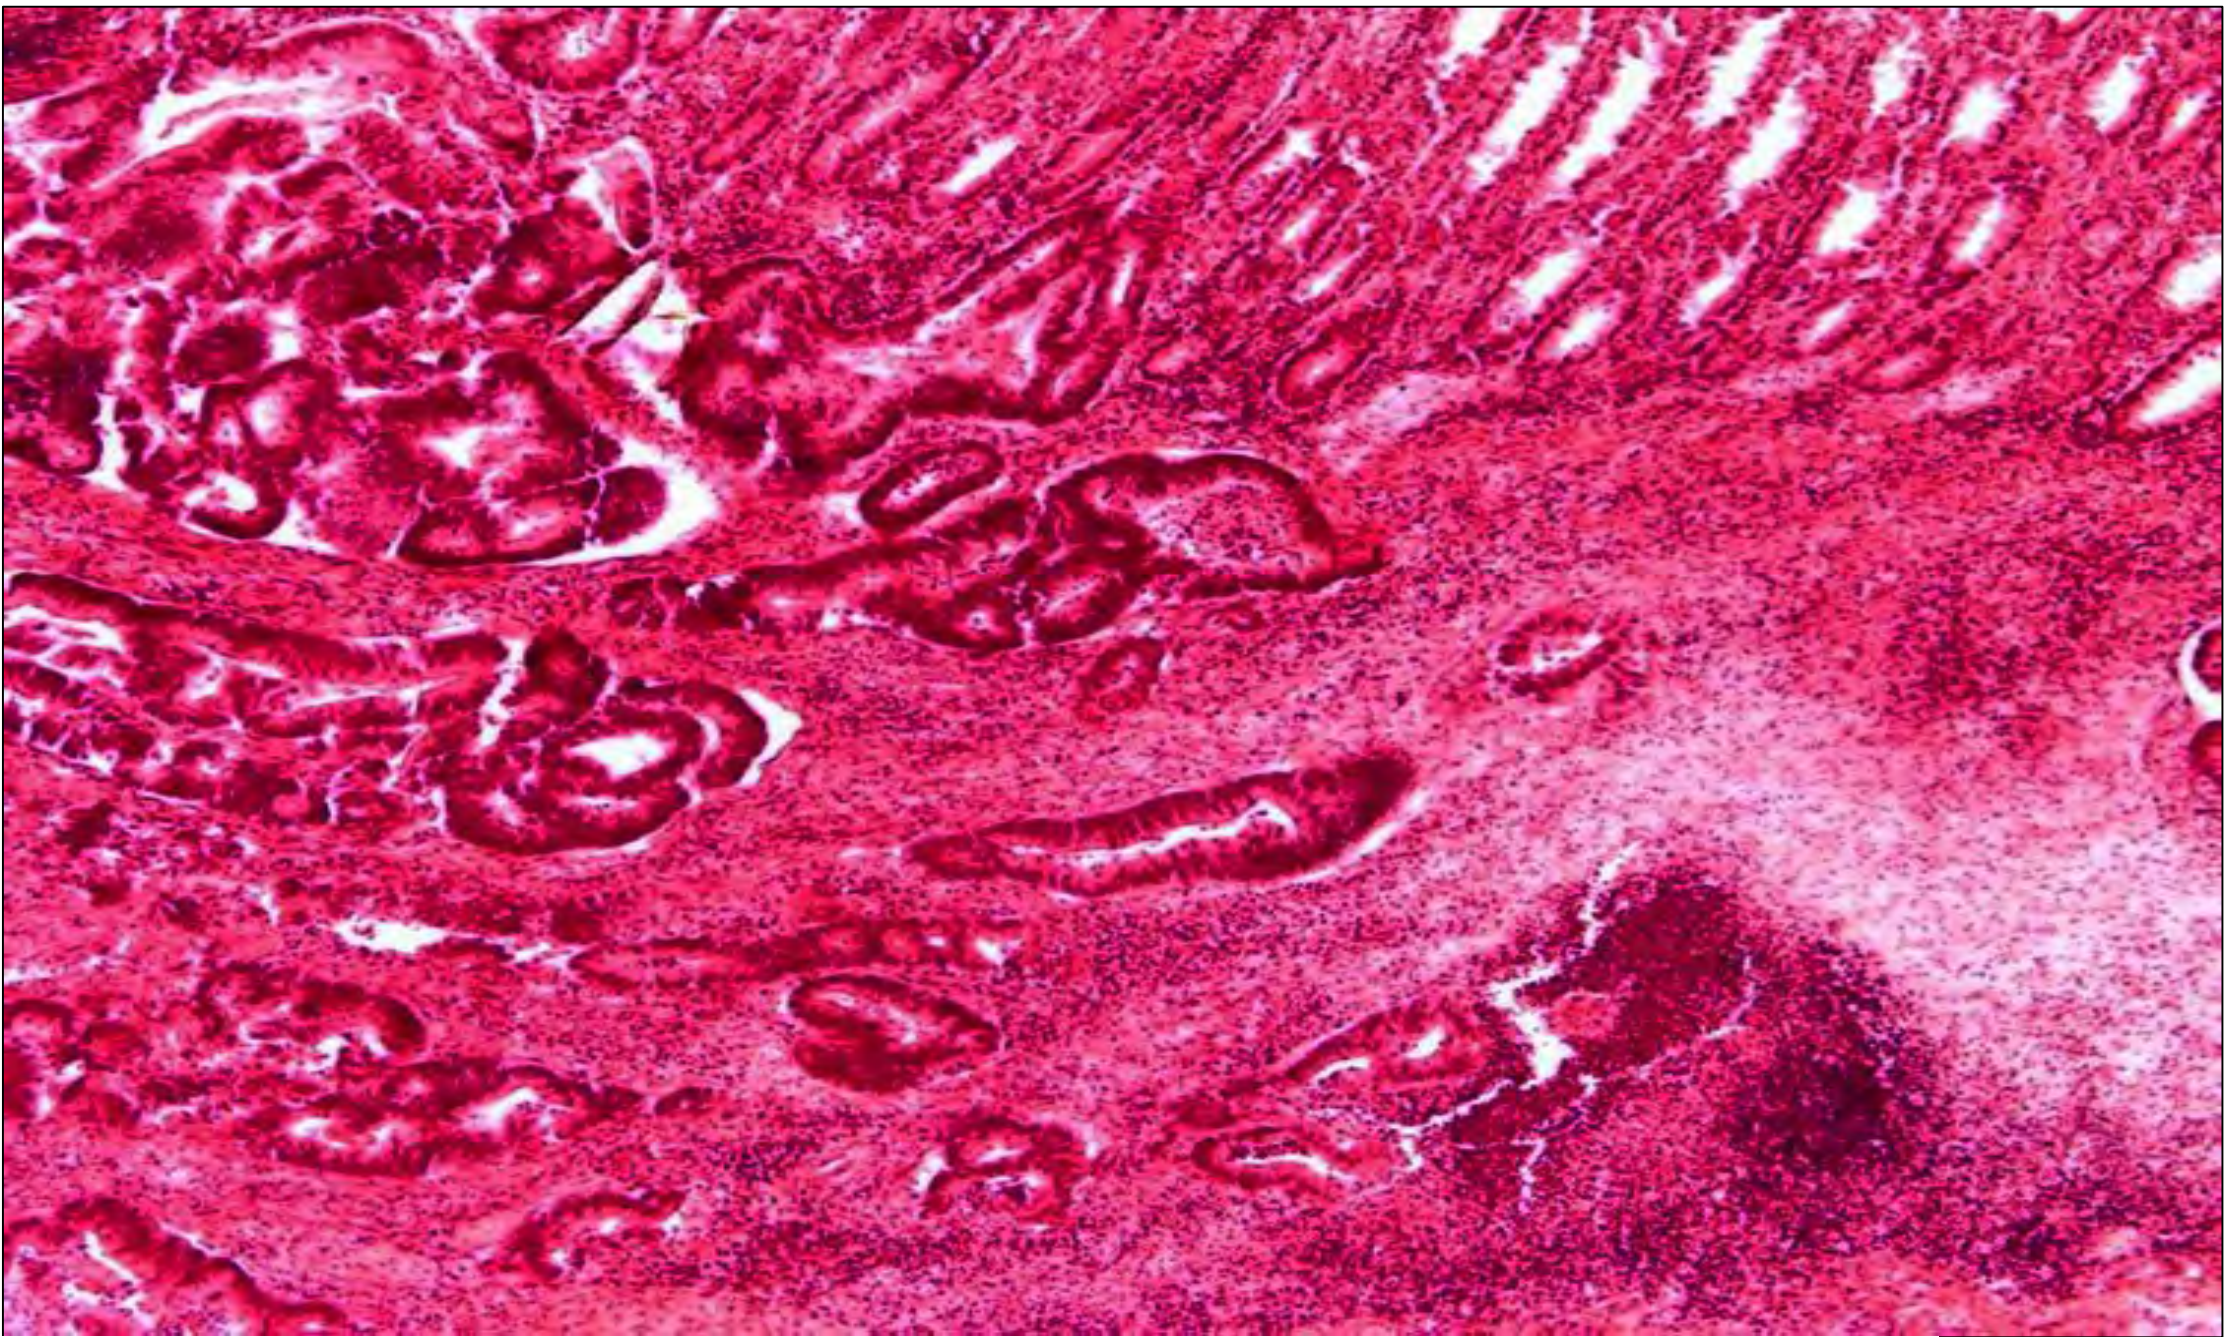

Tuberculous granuloma (miliary pulmonary tuberculosis)

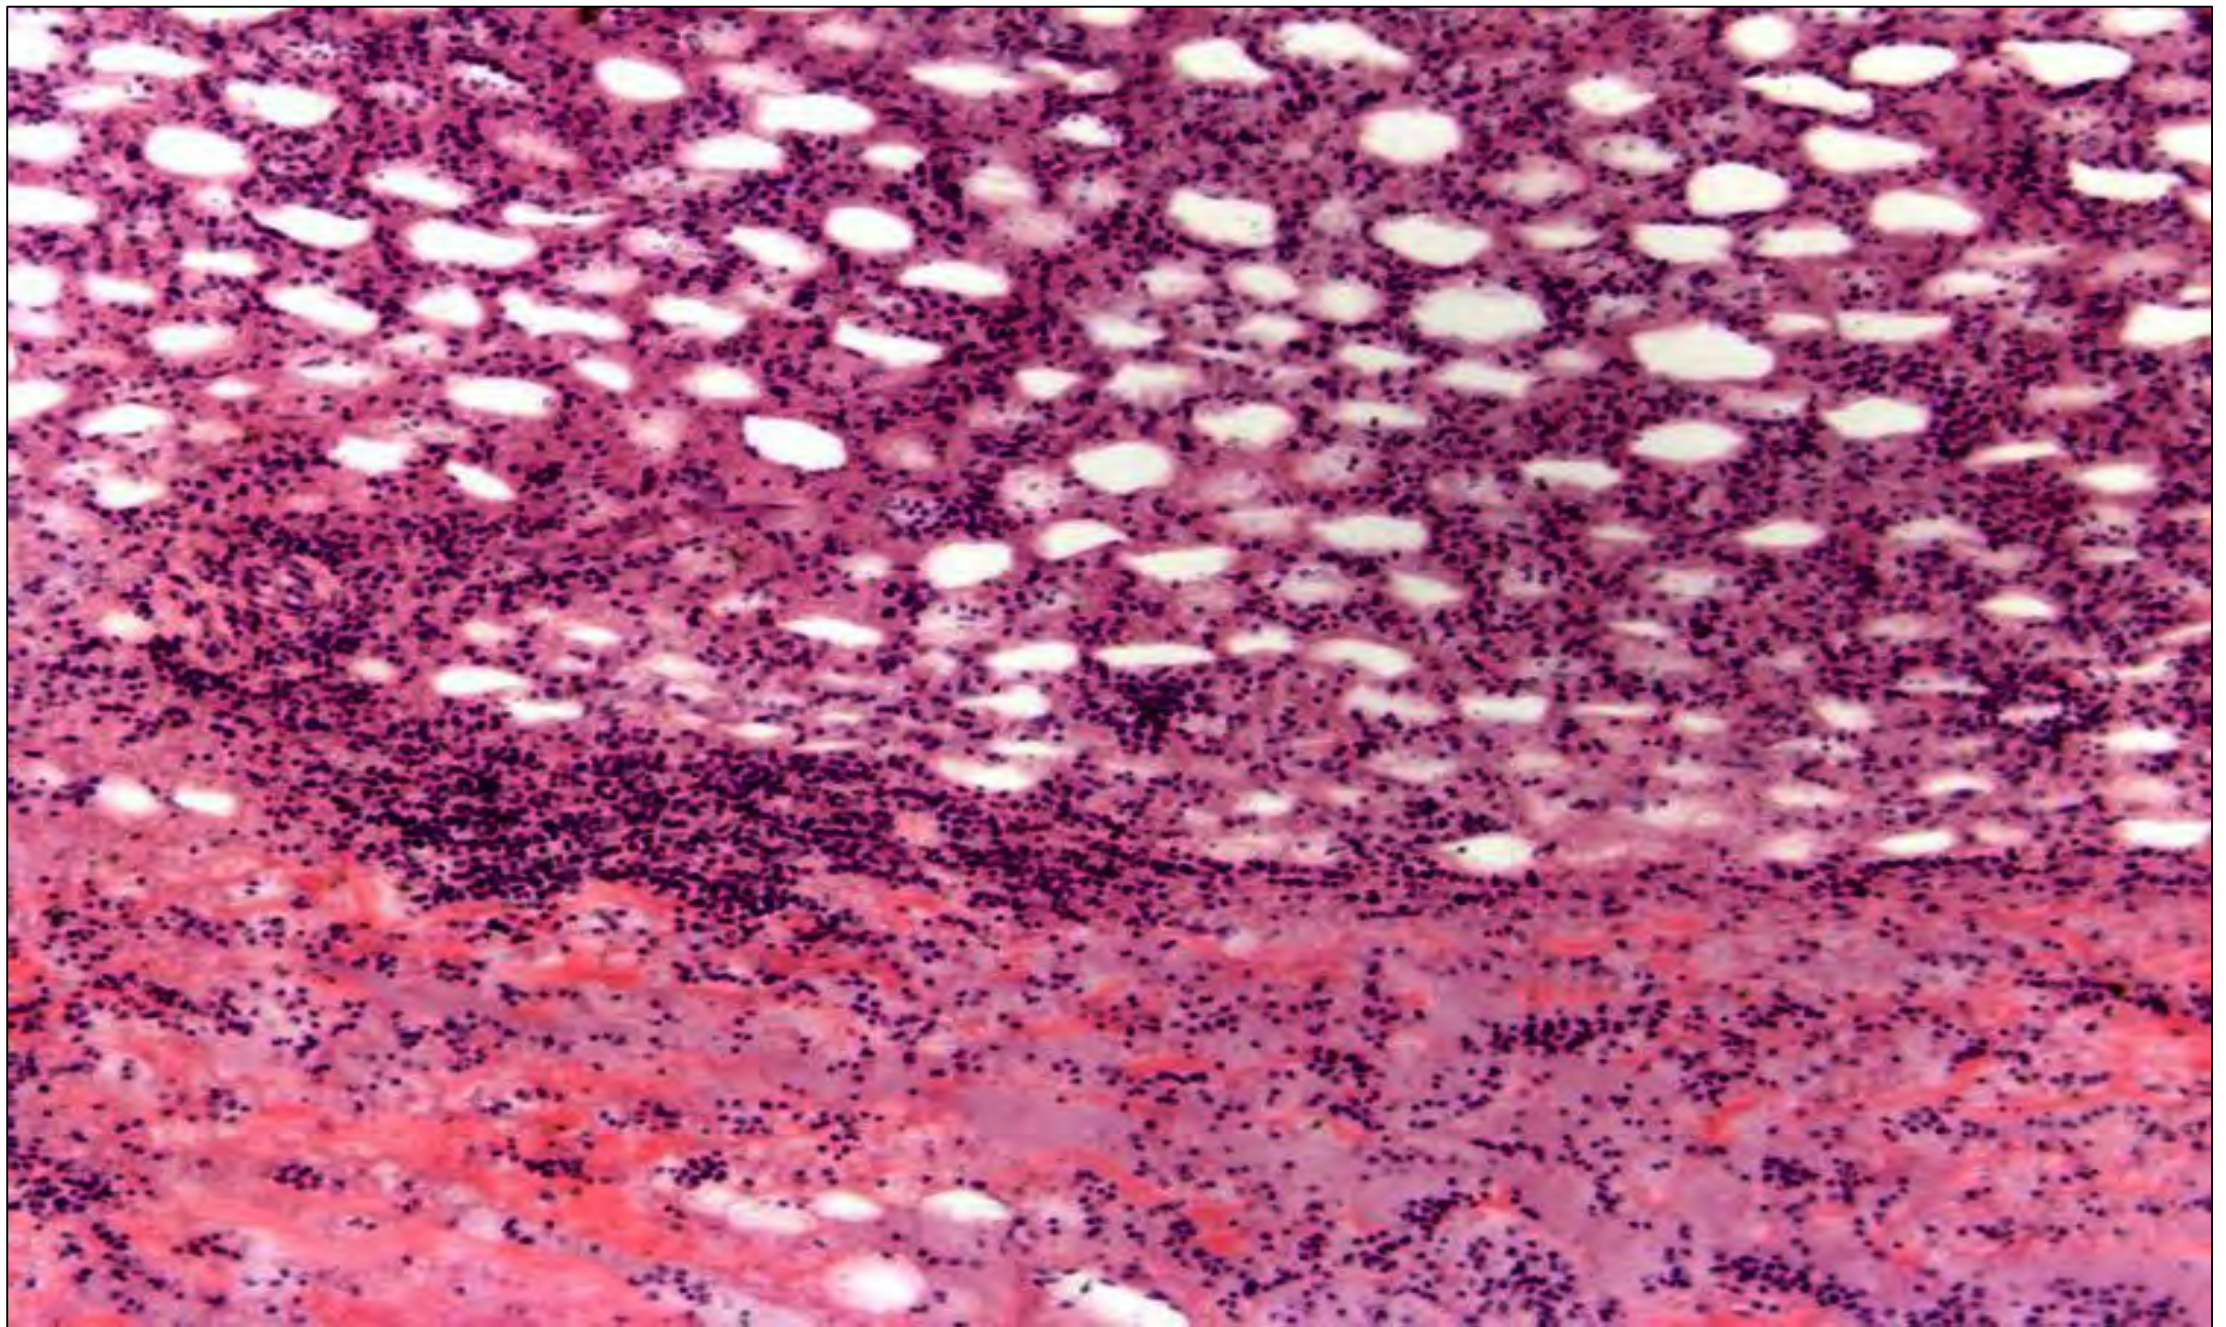

Breast fibroadenoma

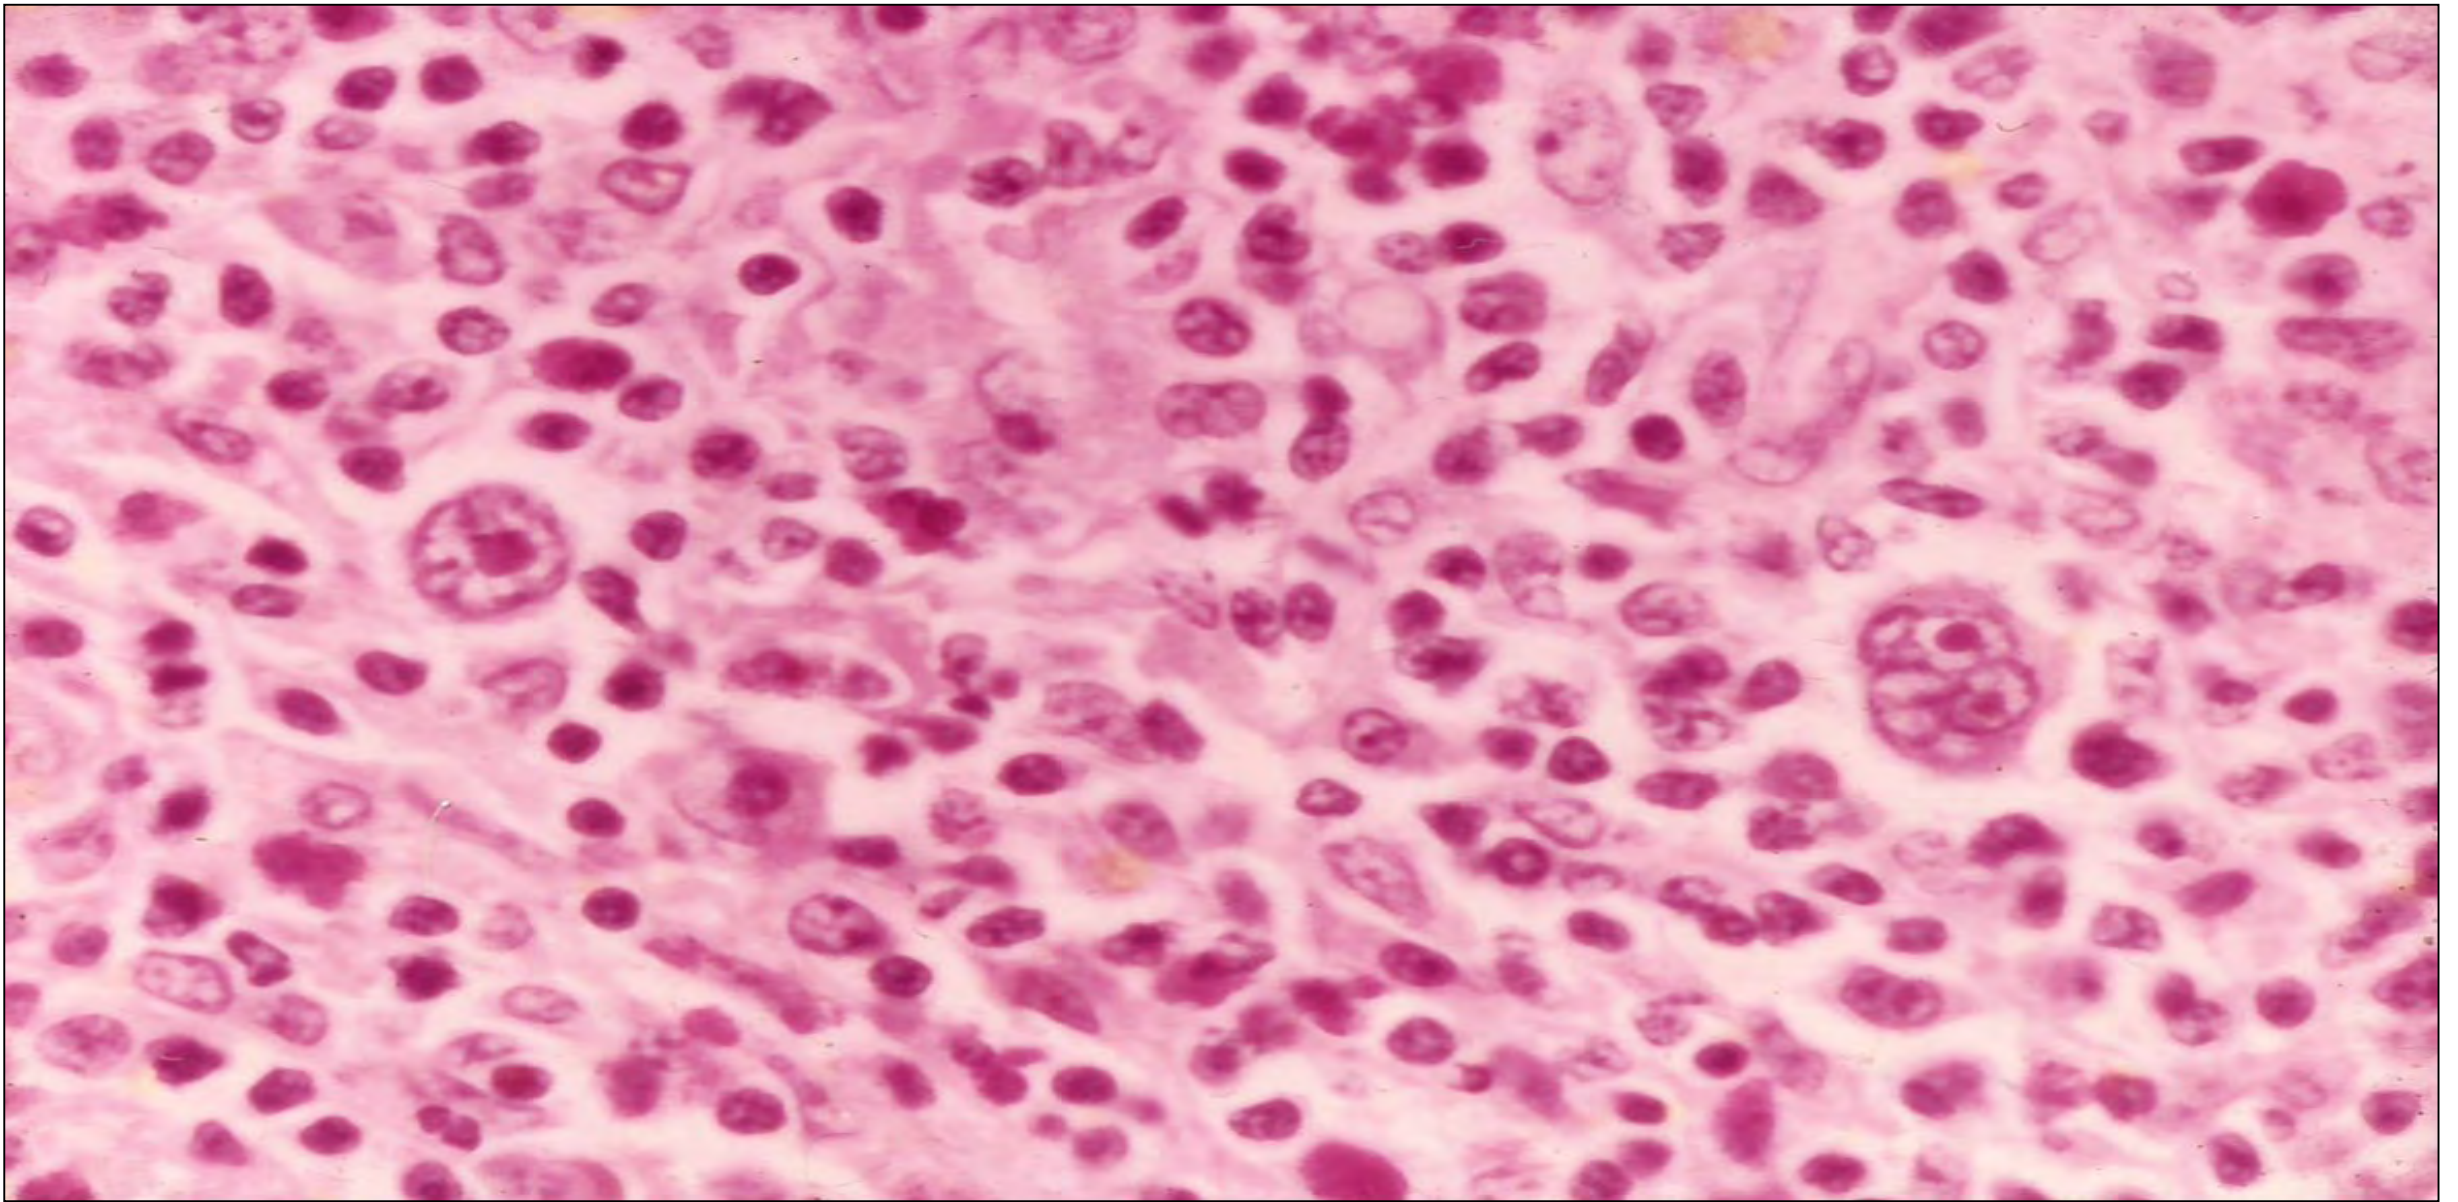

Squamous cell keratinizing carcinoma of the esophagus

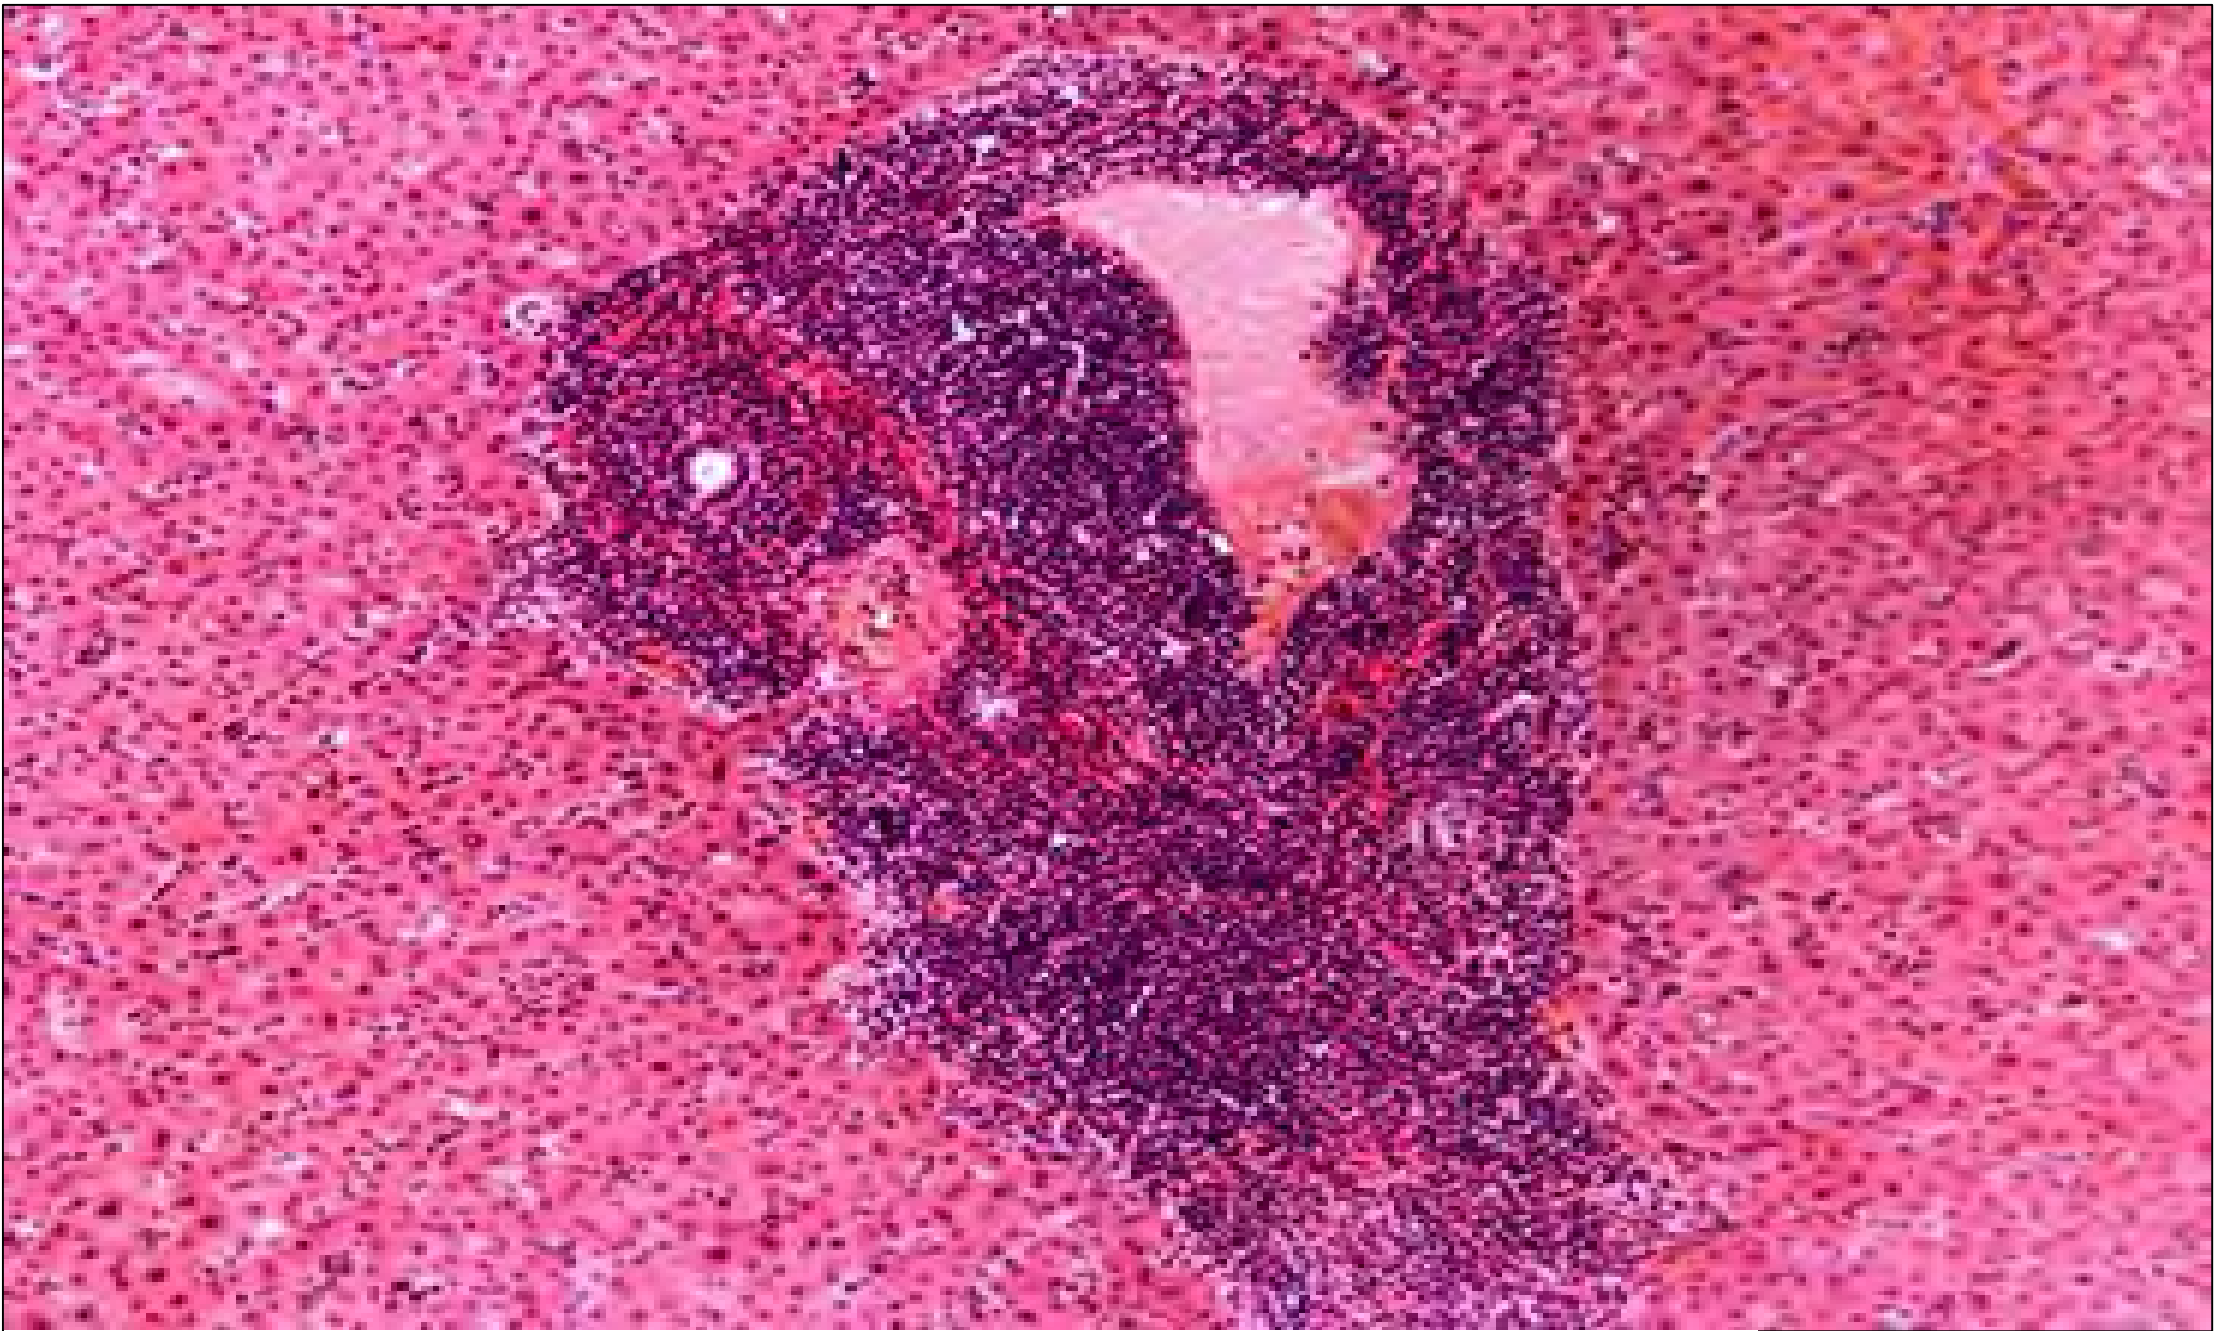

Adenocarcinoma of the stomach

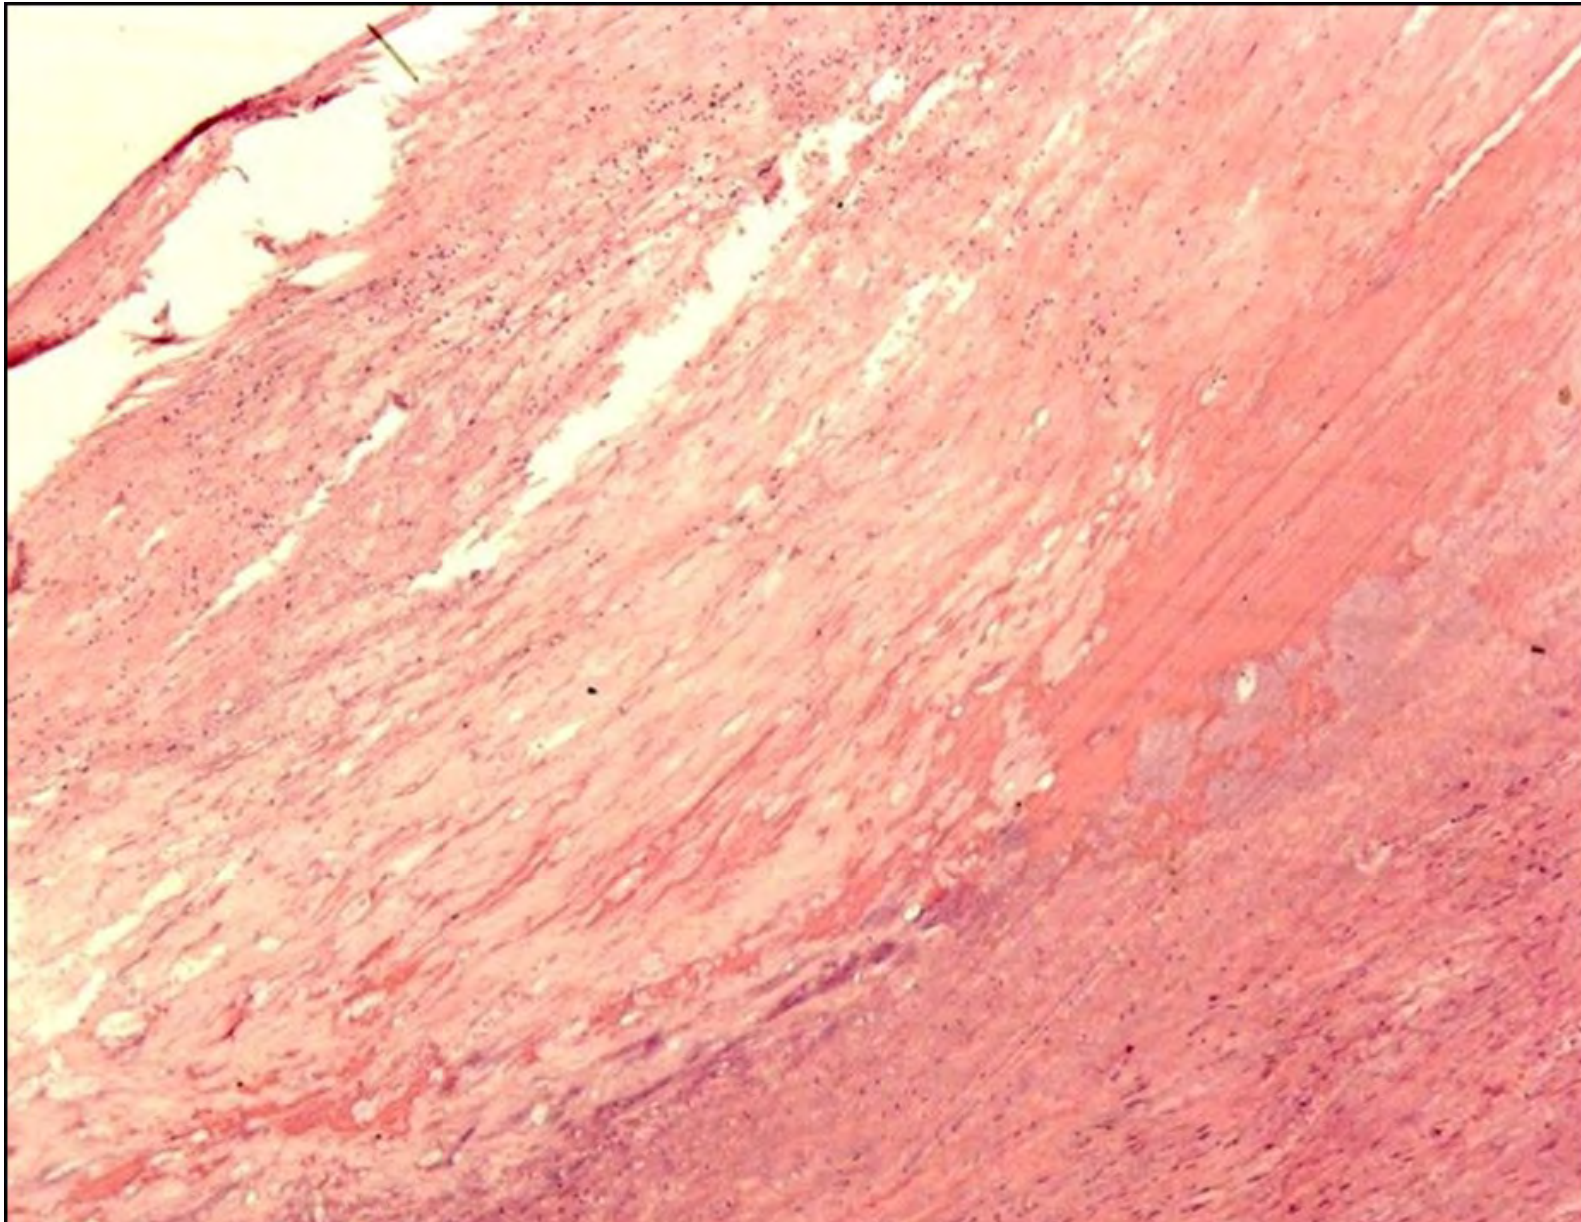

Phlegmon of subcutaneous tissue

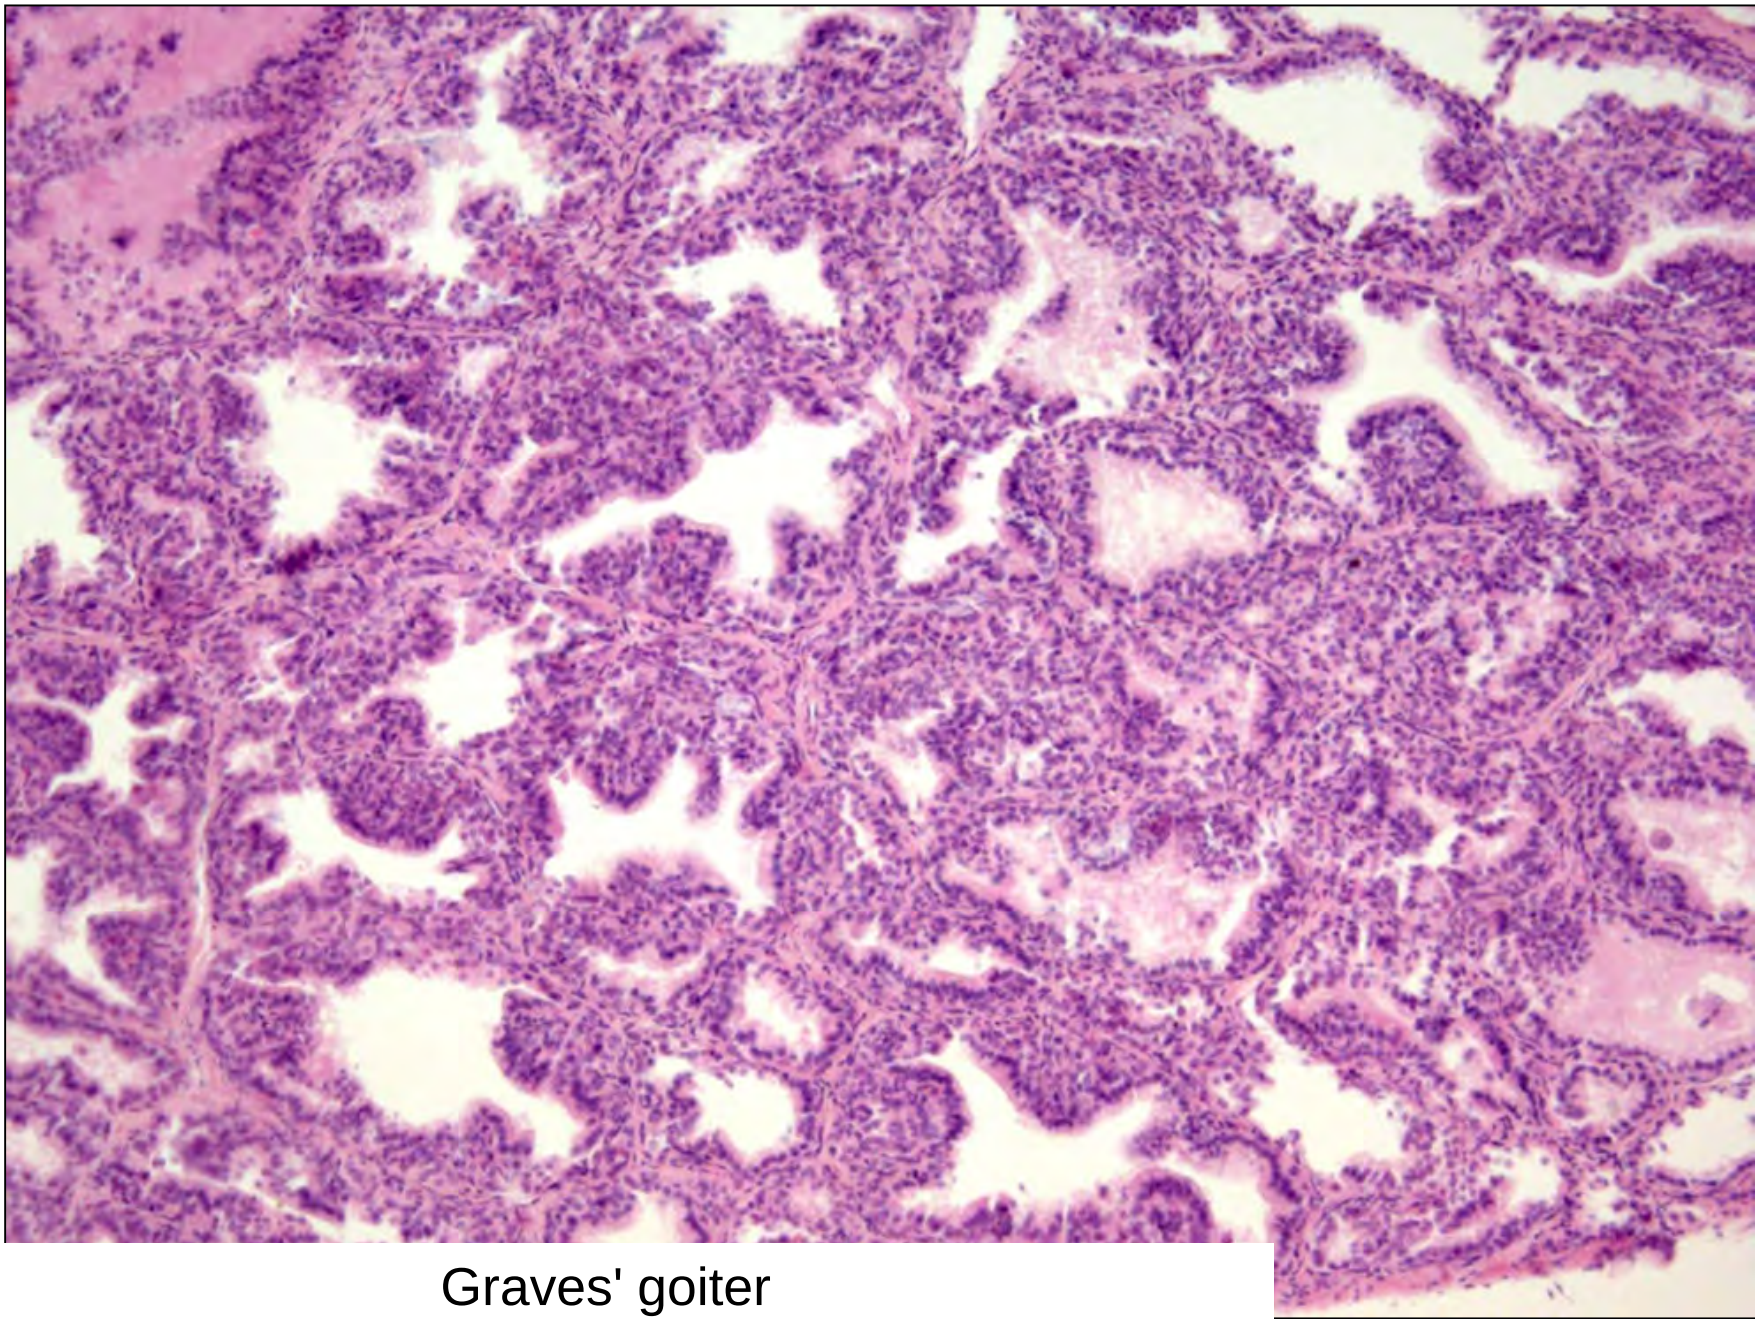

Lymph node in Hodgkin's lymphoma

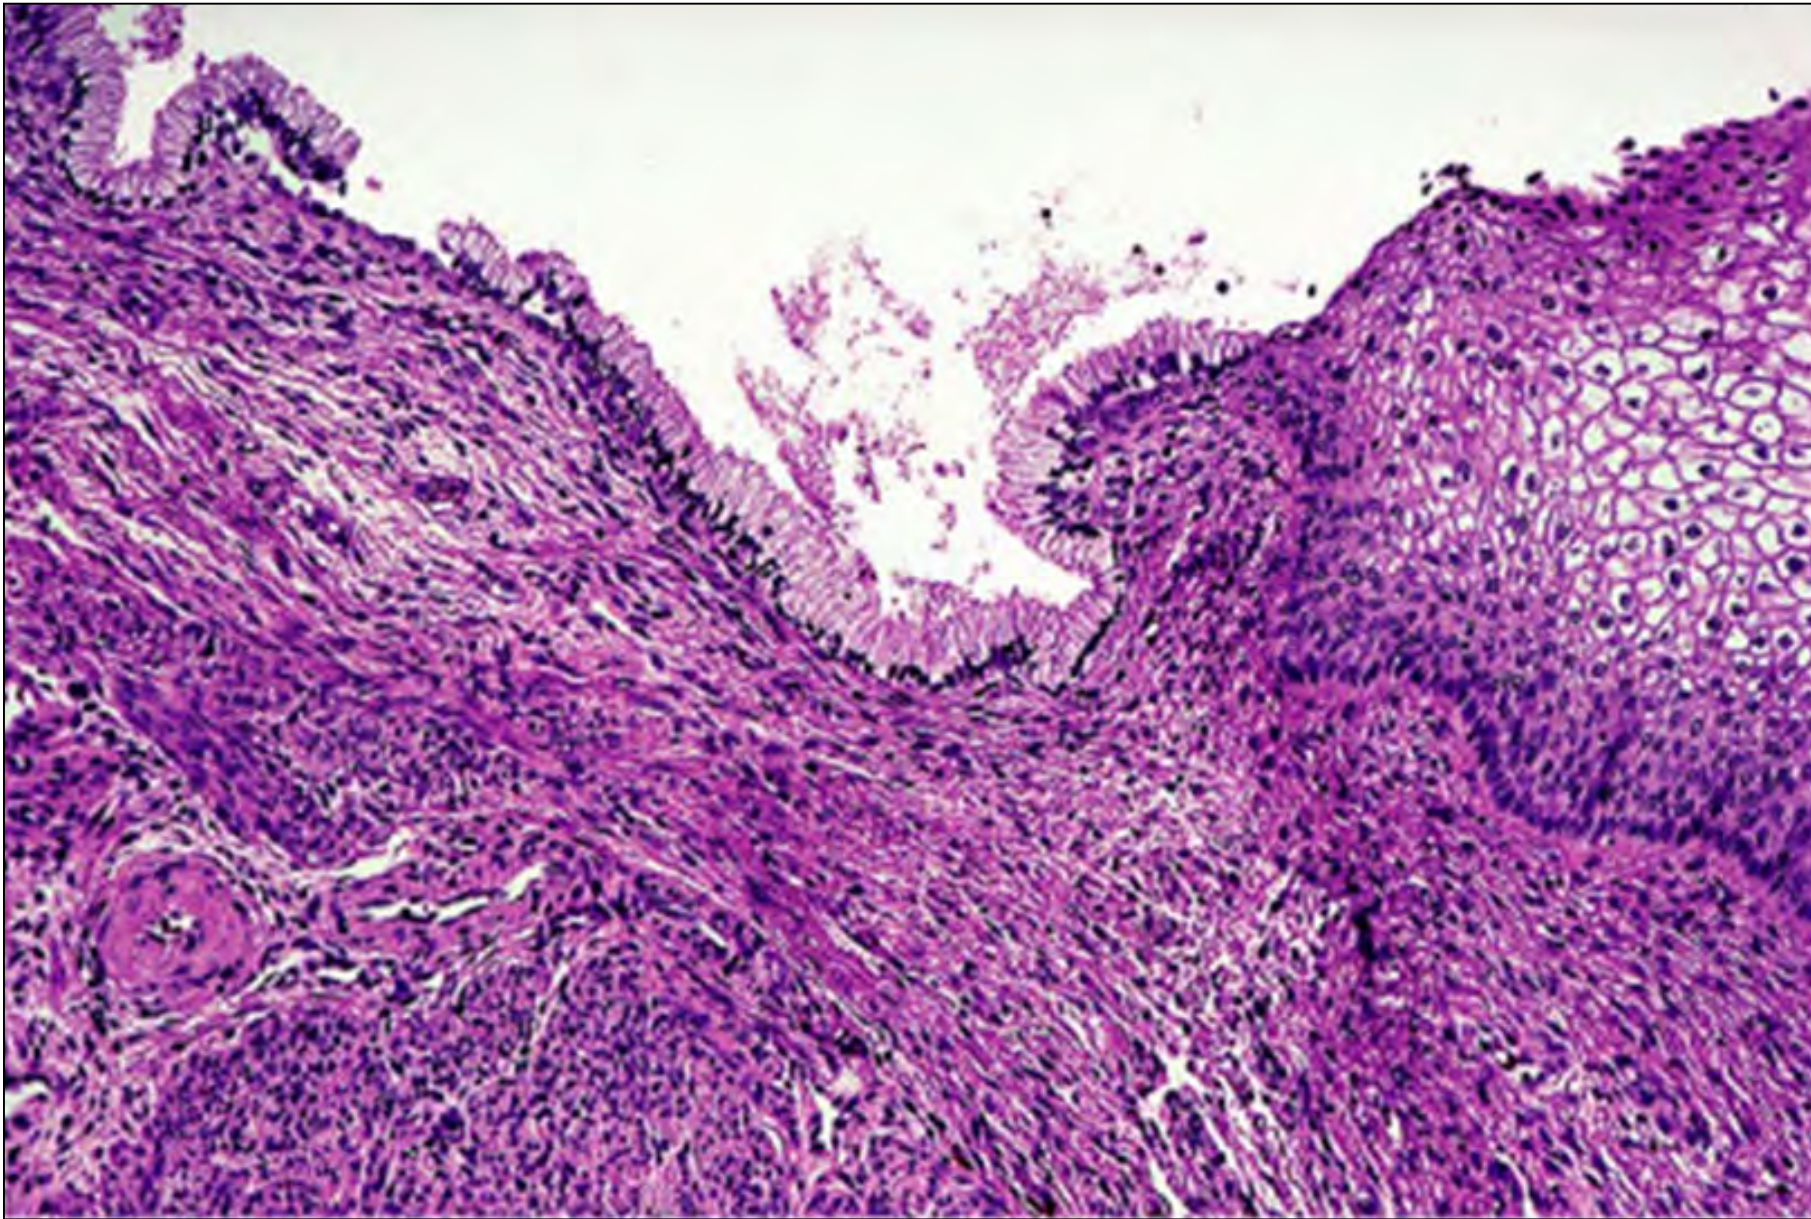

Liver in lymphocytic leukemia

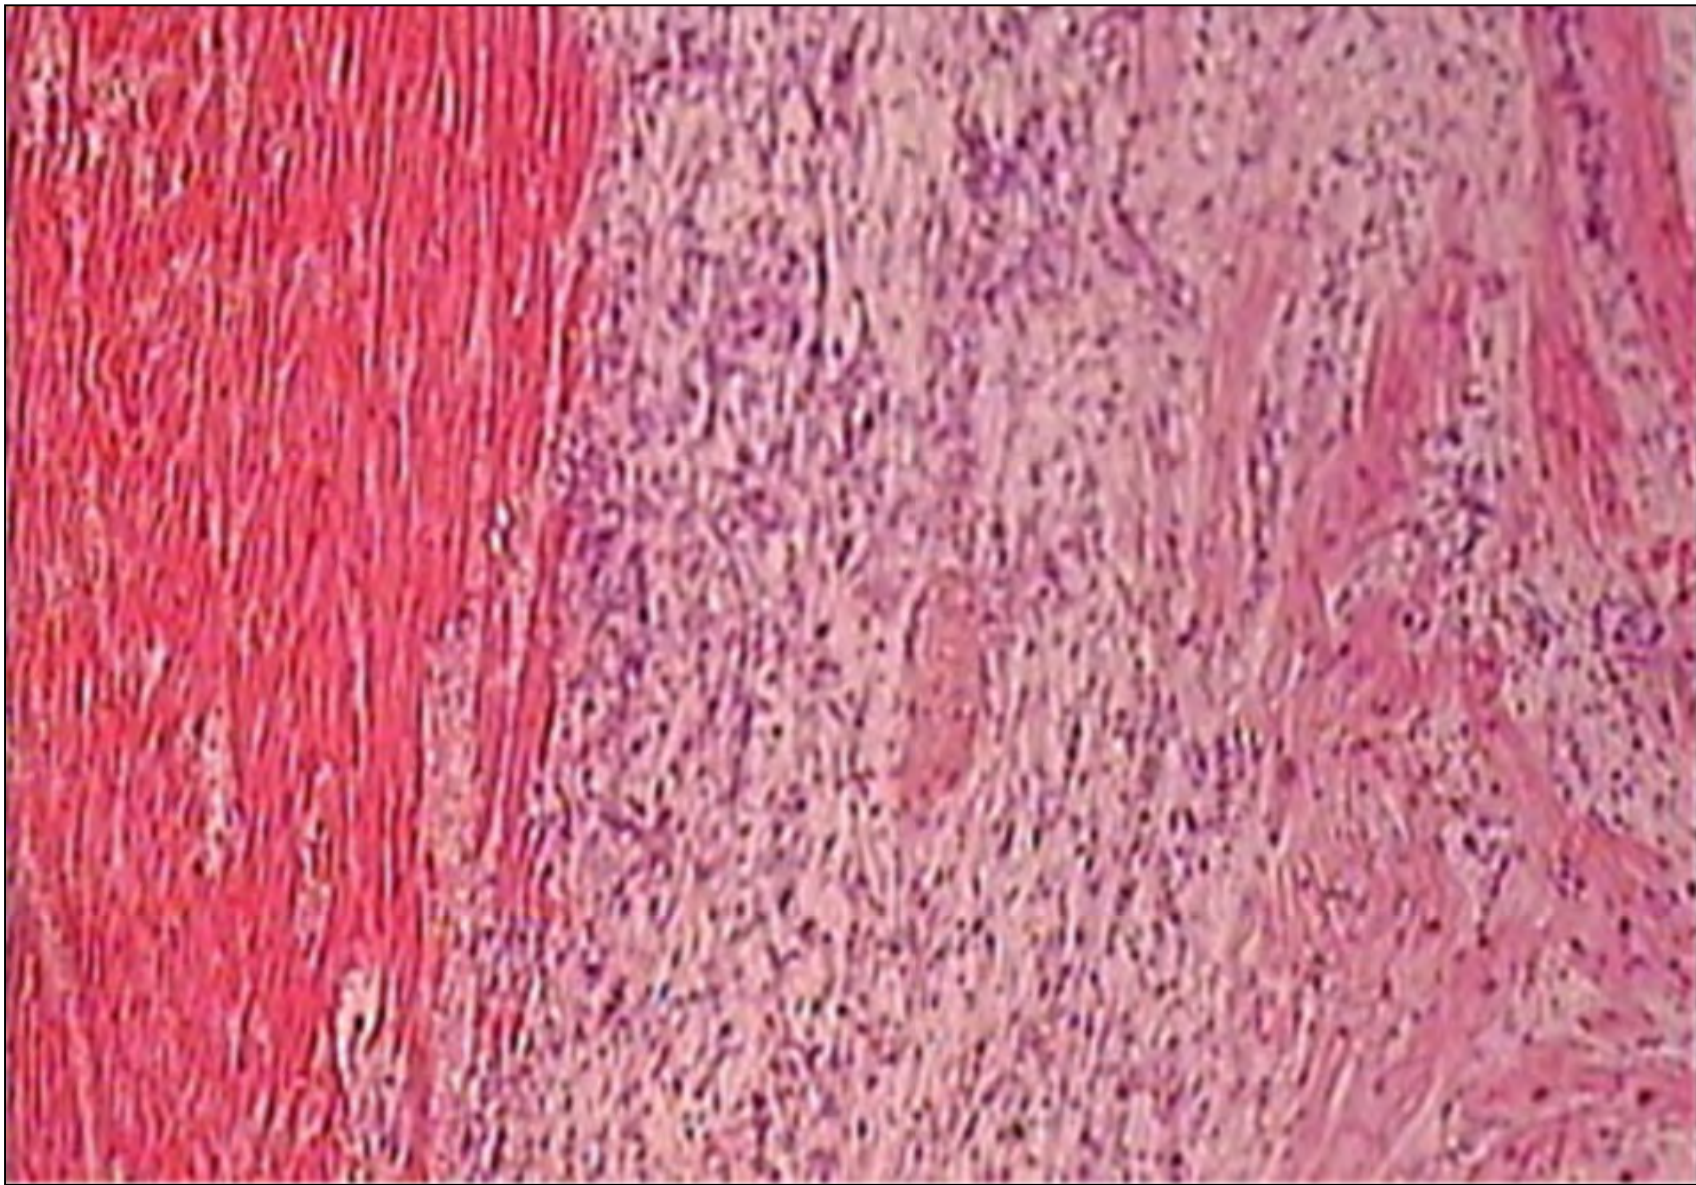

Atherosclerotic plaque in the aorta

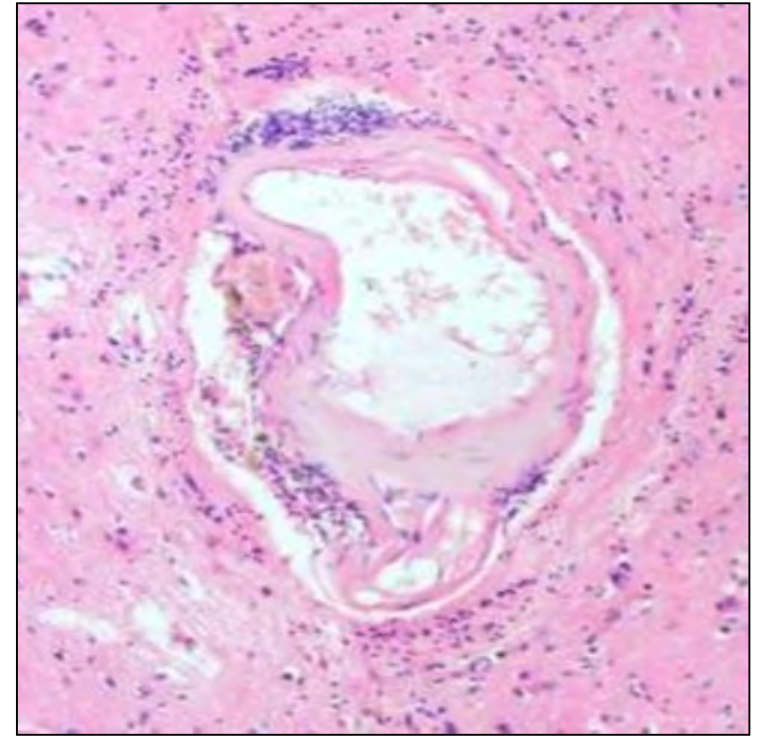

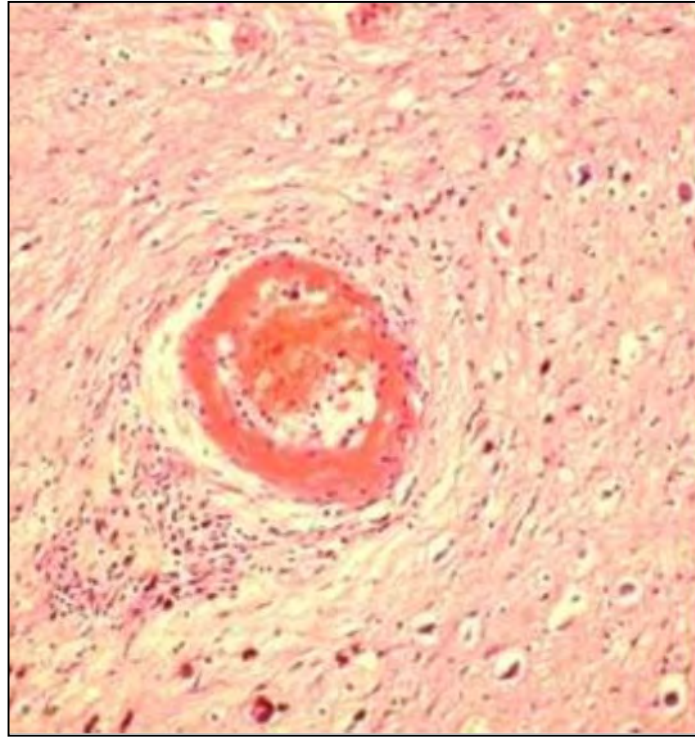

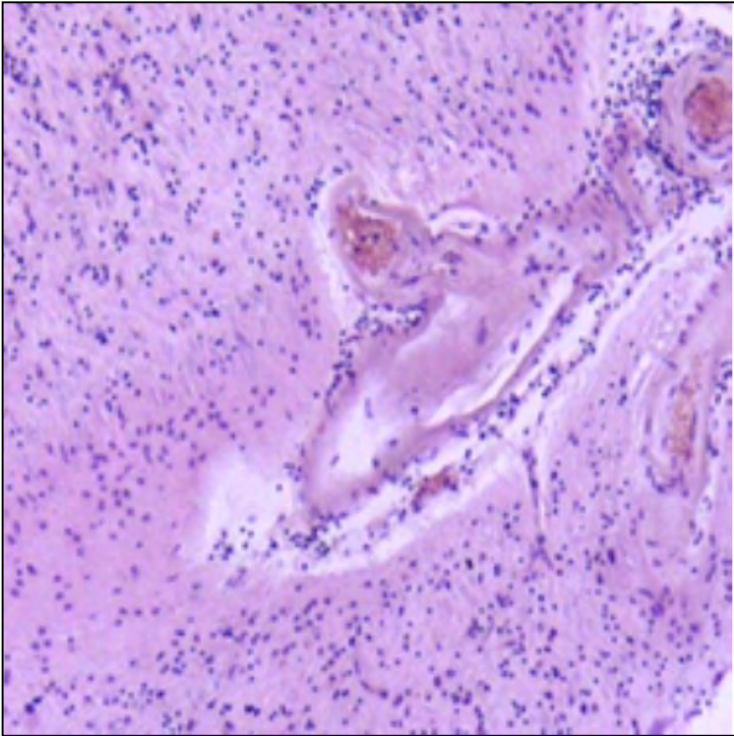

Graves' goiter

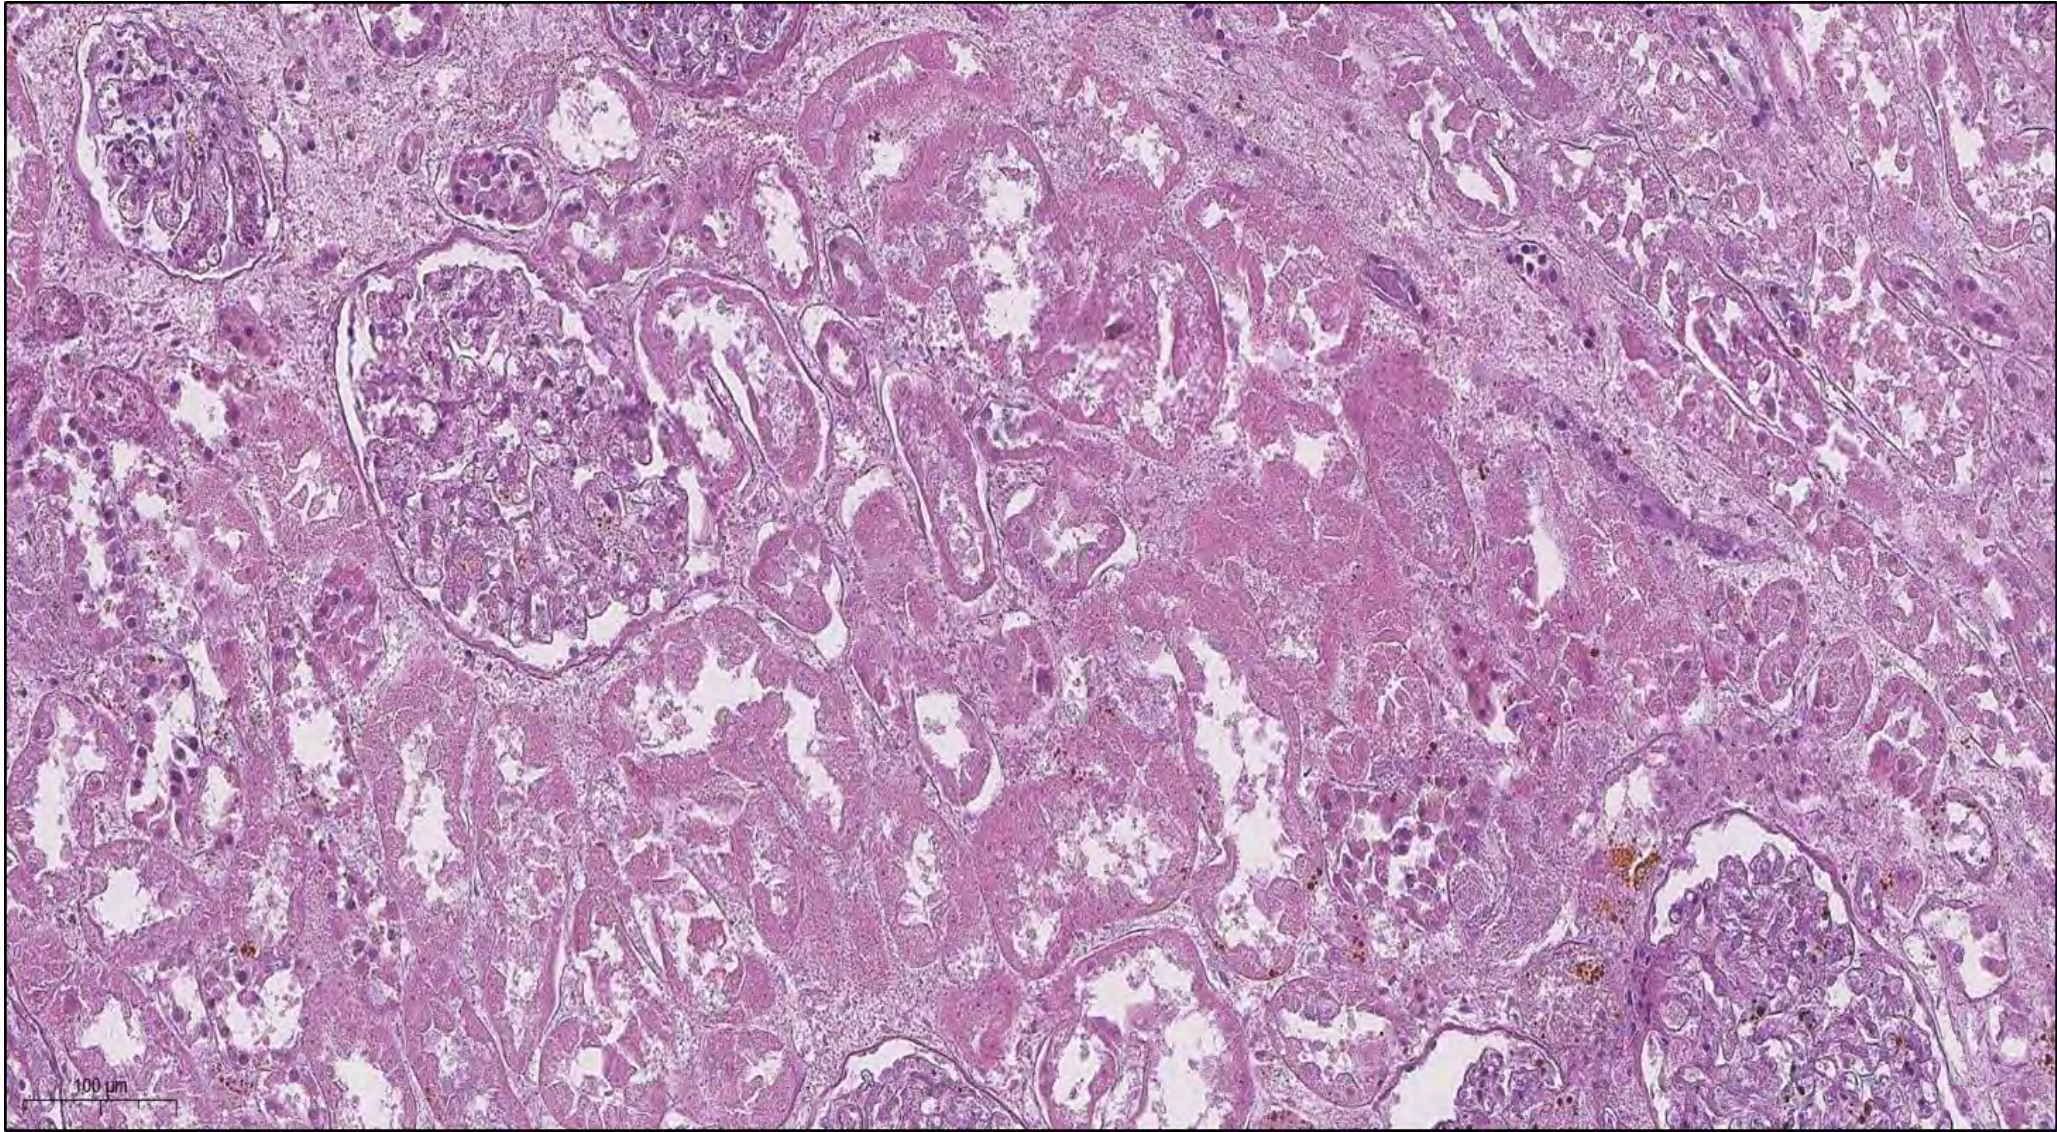

Cervical endocervicosis

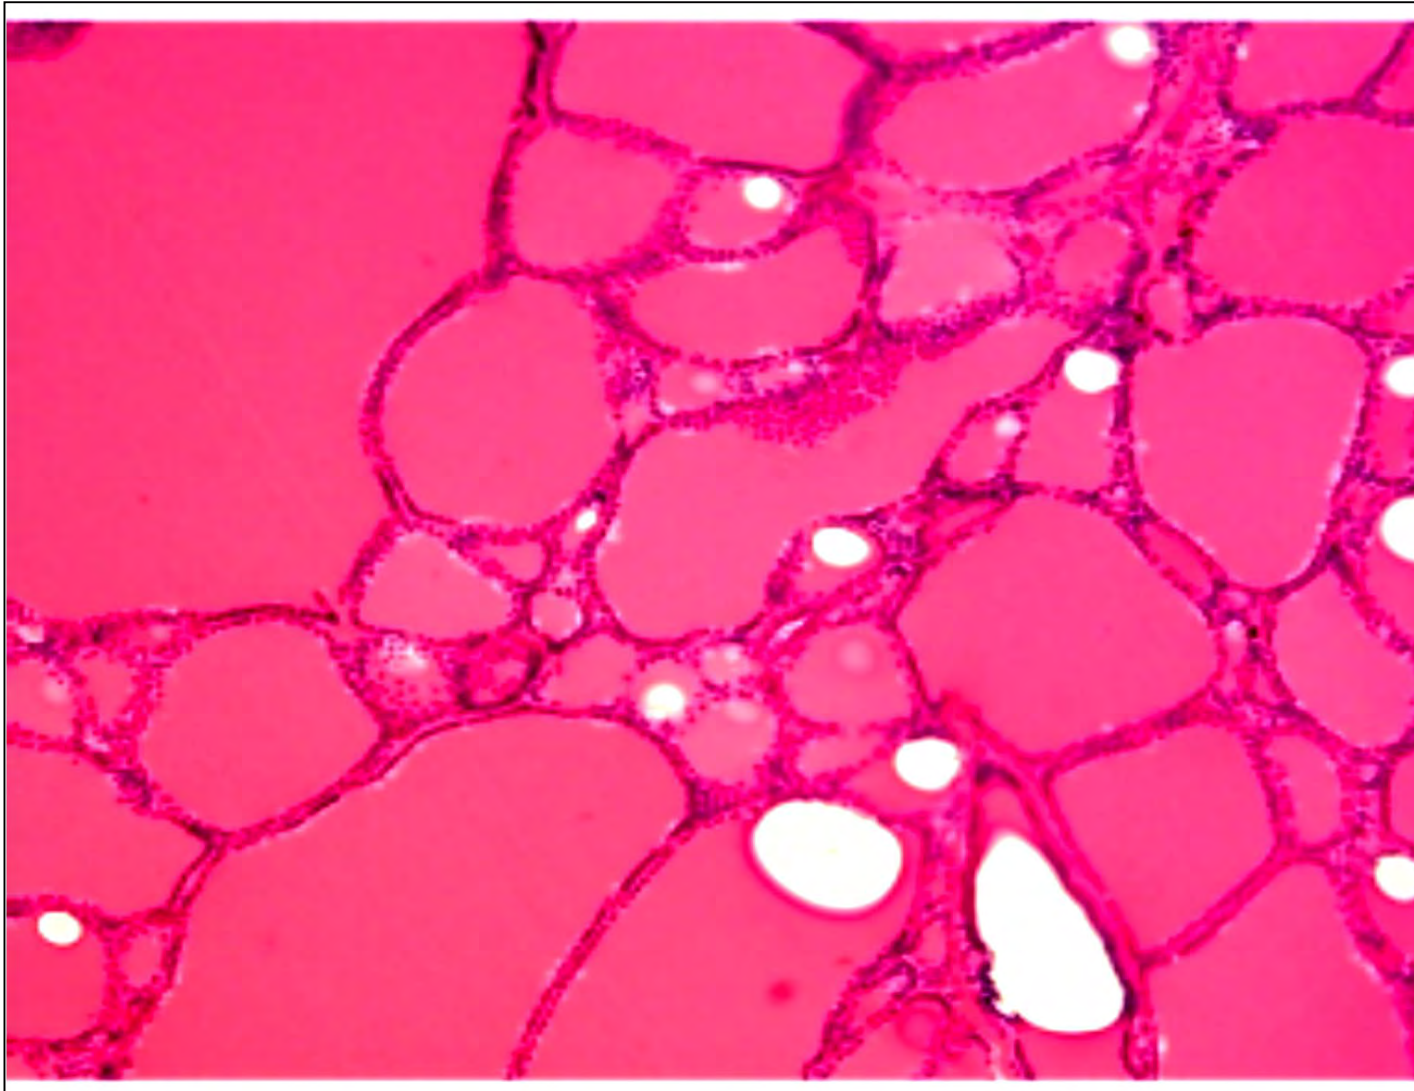

Transmurular myocardial infarction with the start of organization

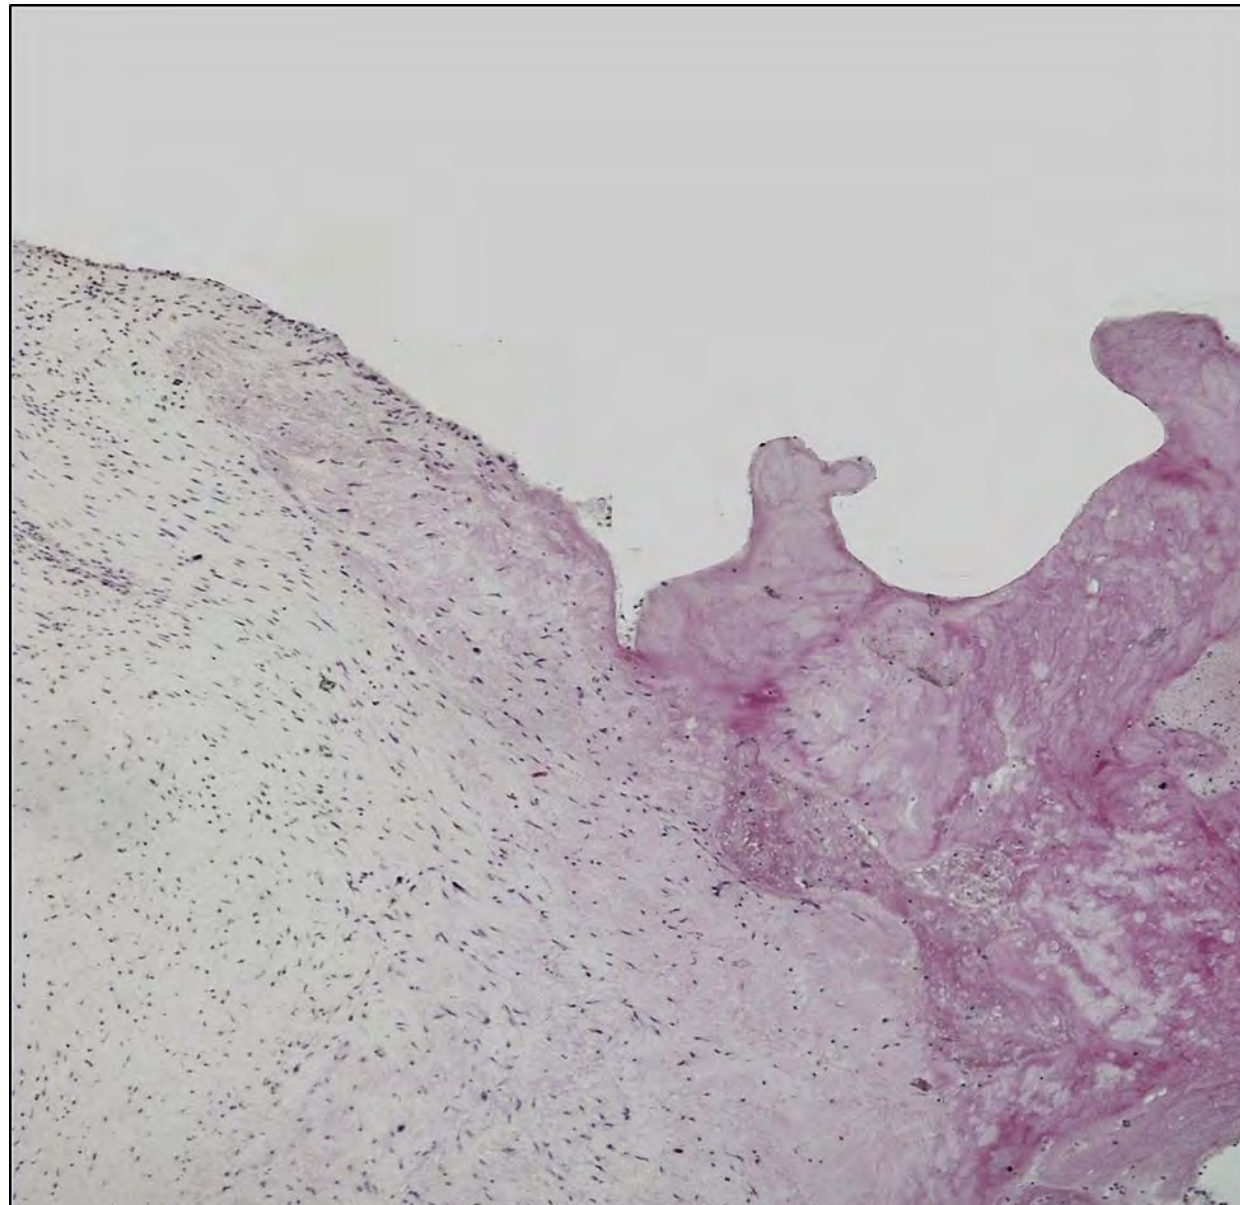

Cerebral vessels in hypertension disease

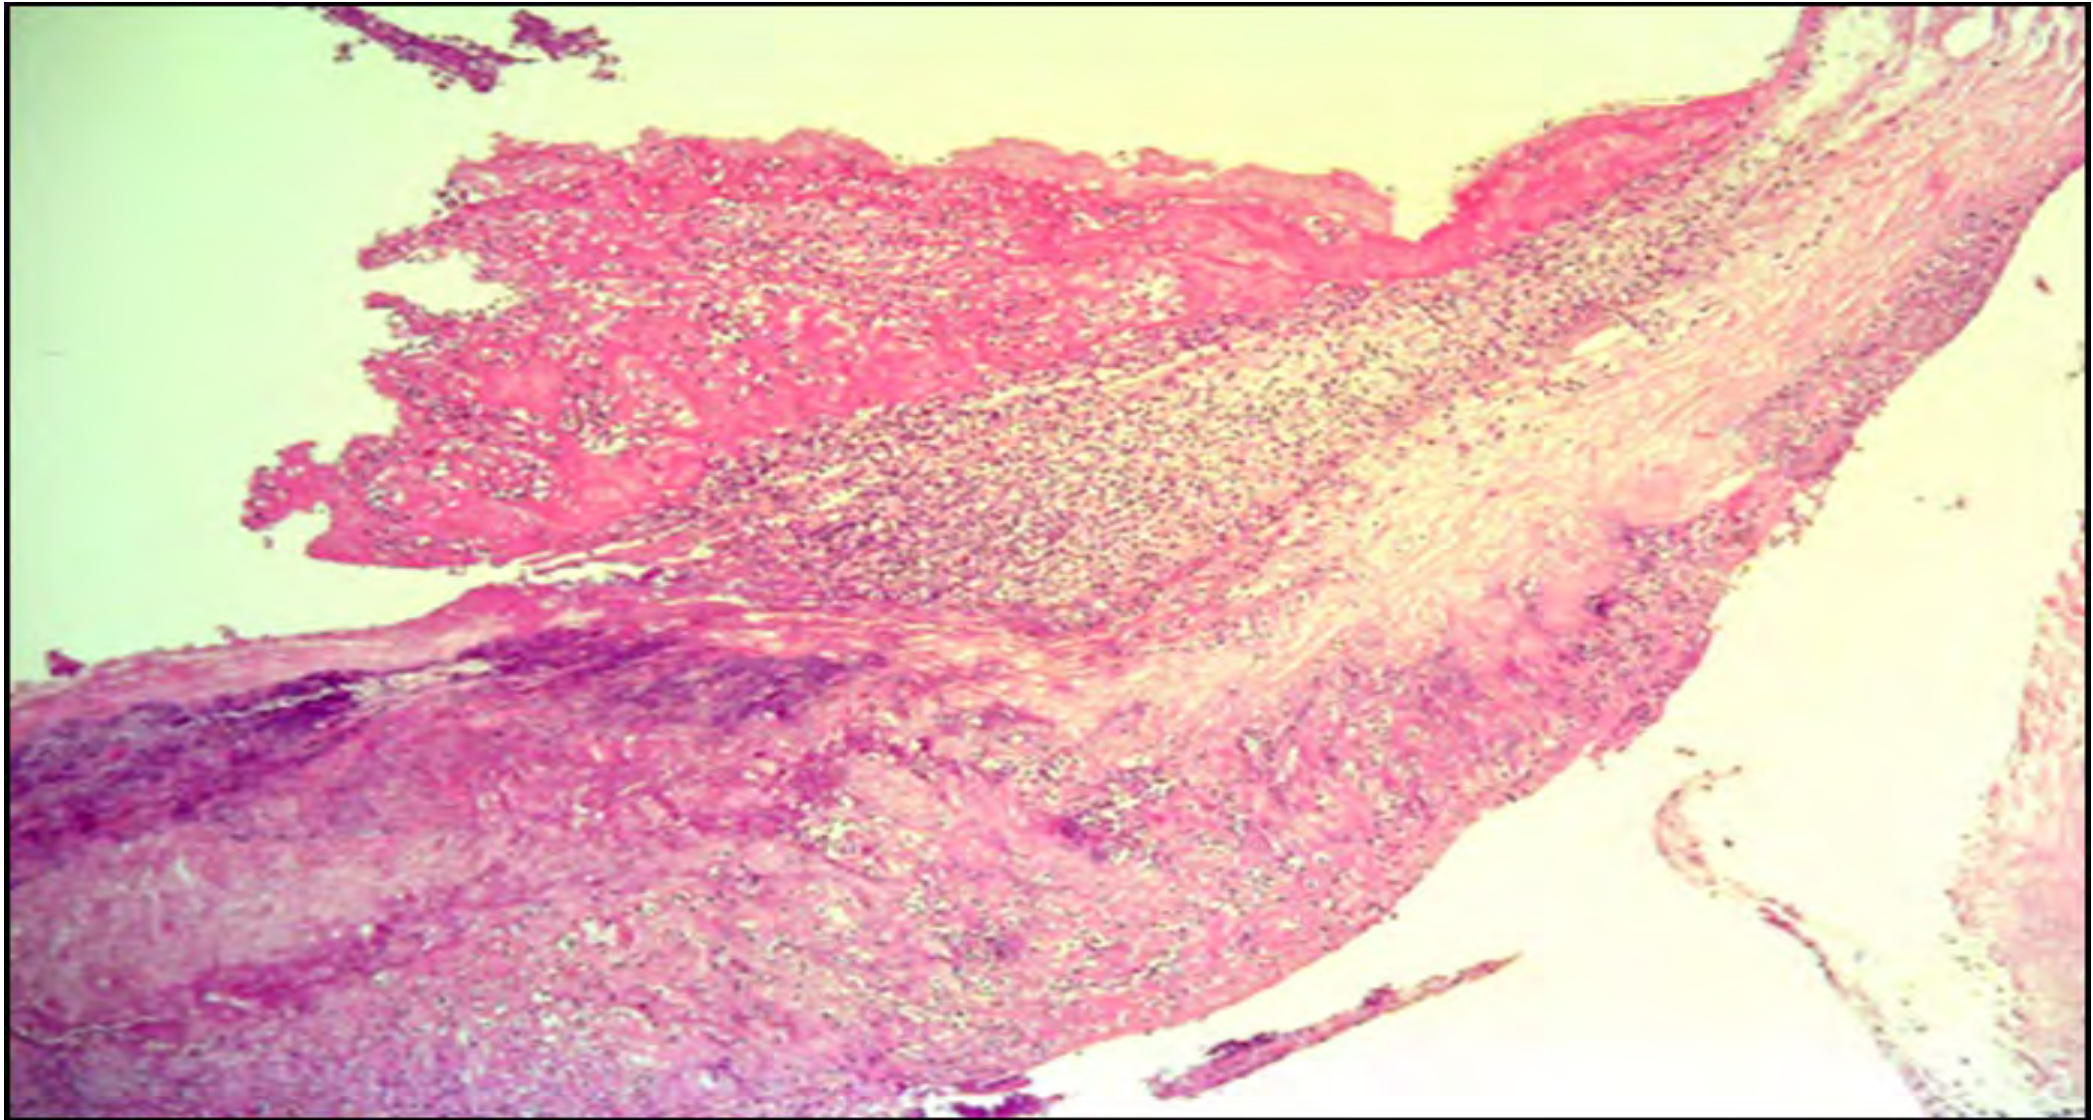

Necrotizing nephrosis

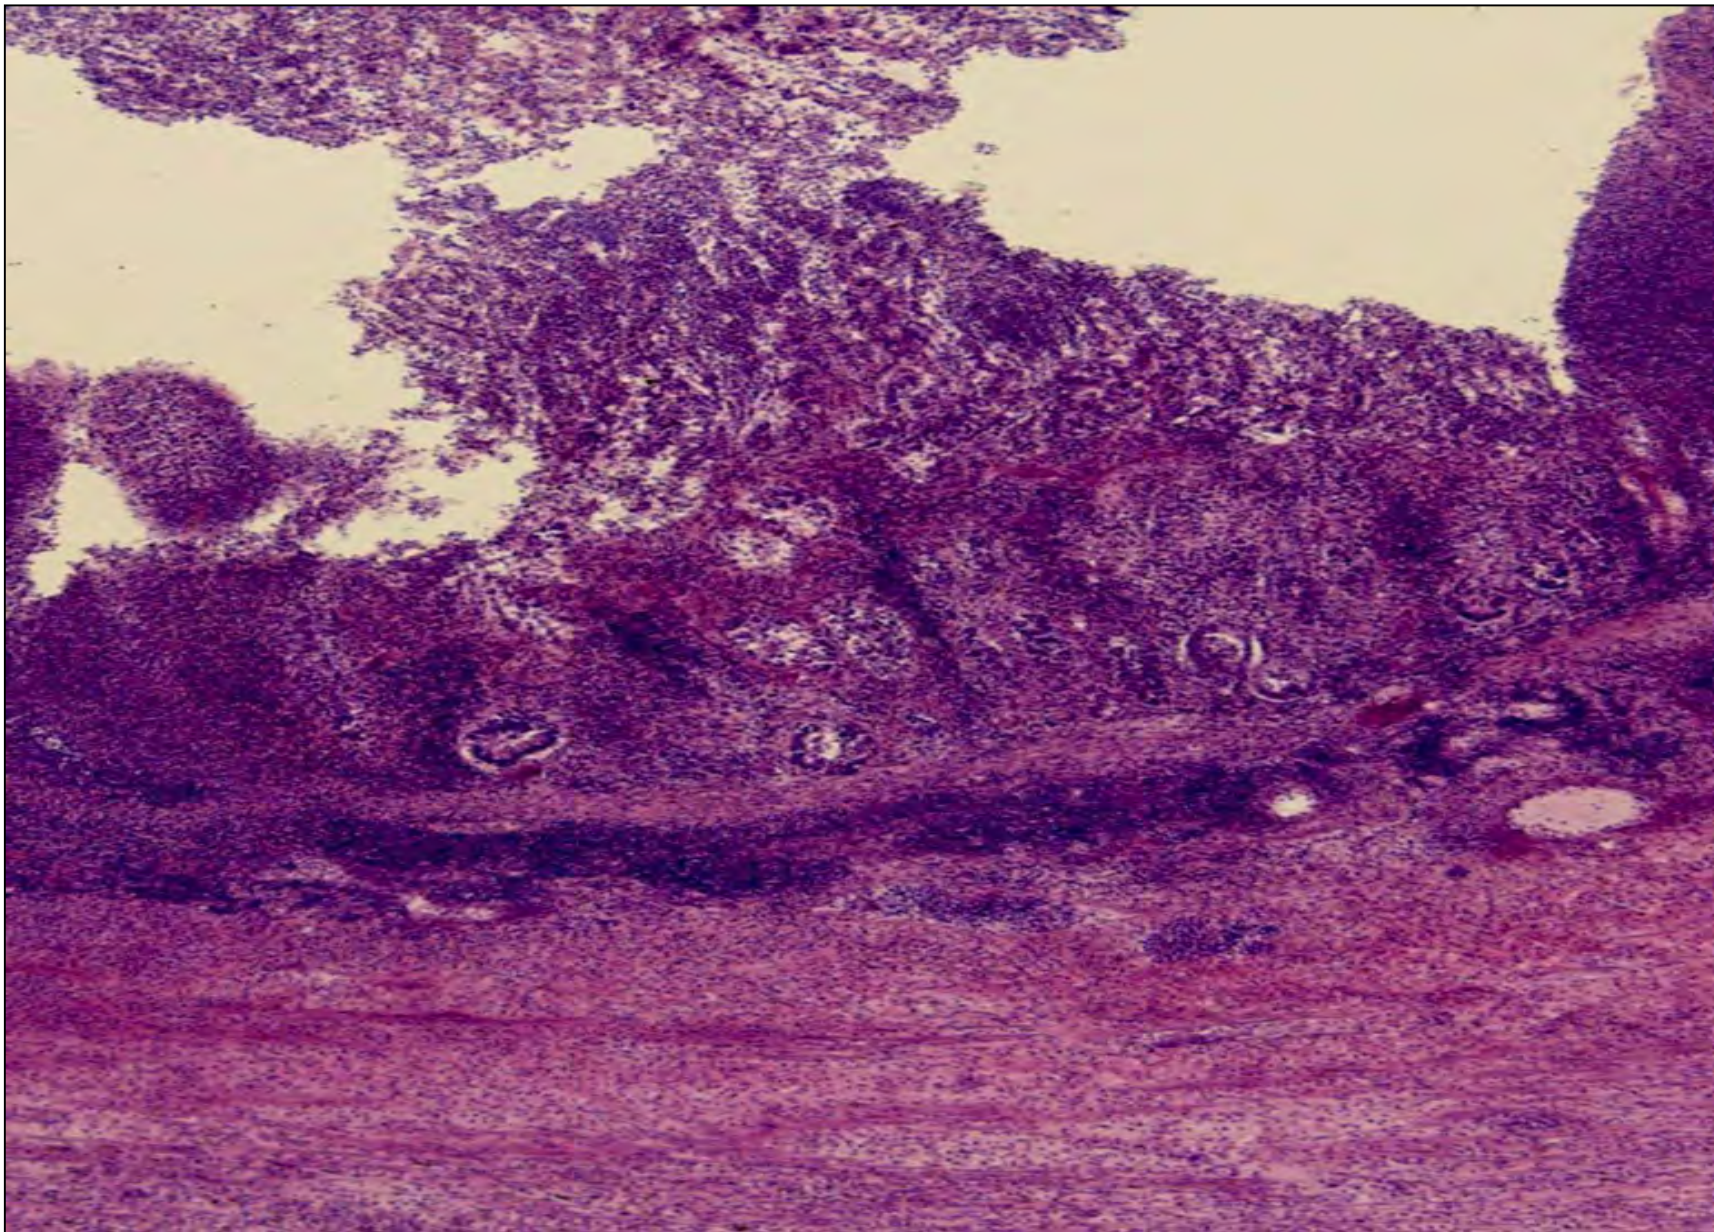

Colloidal Struma

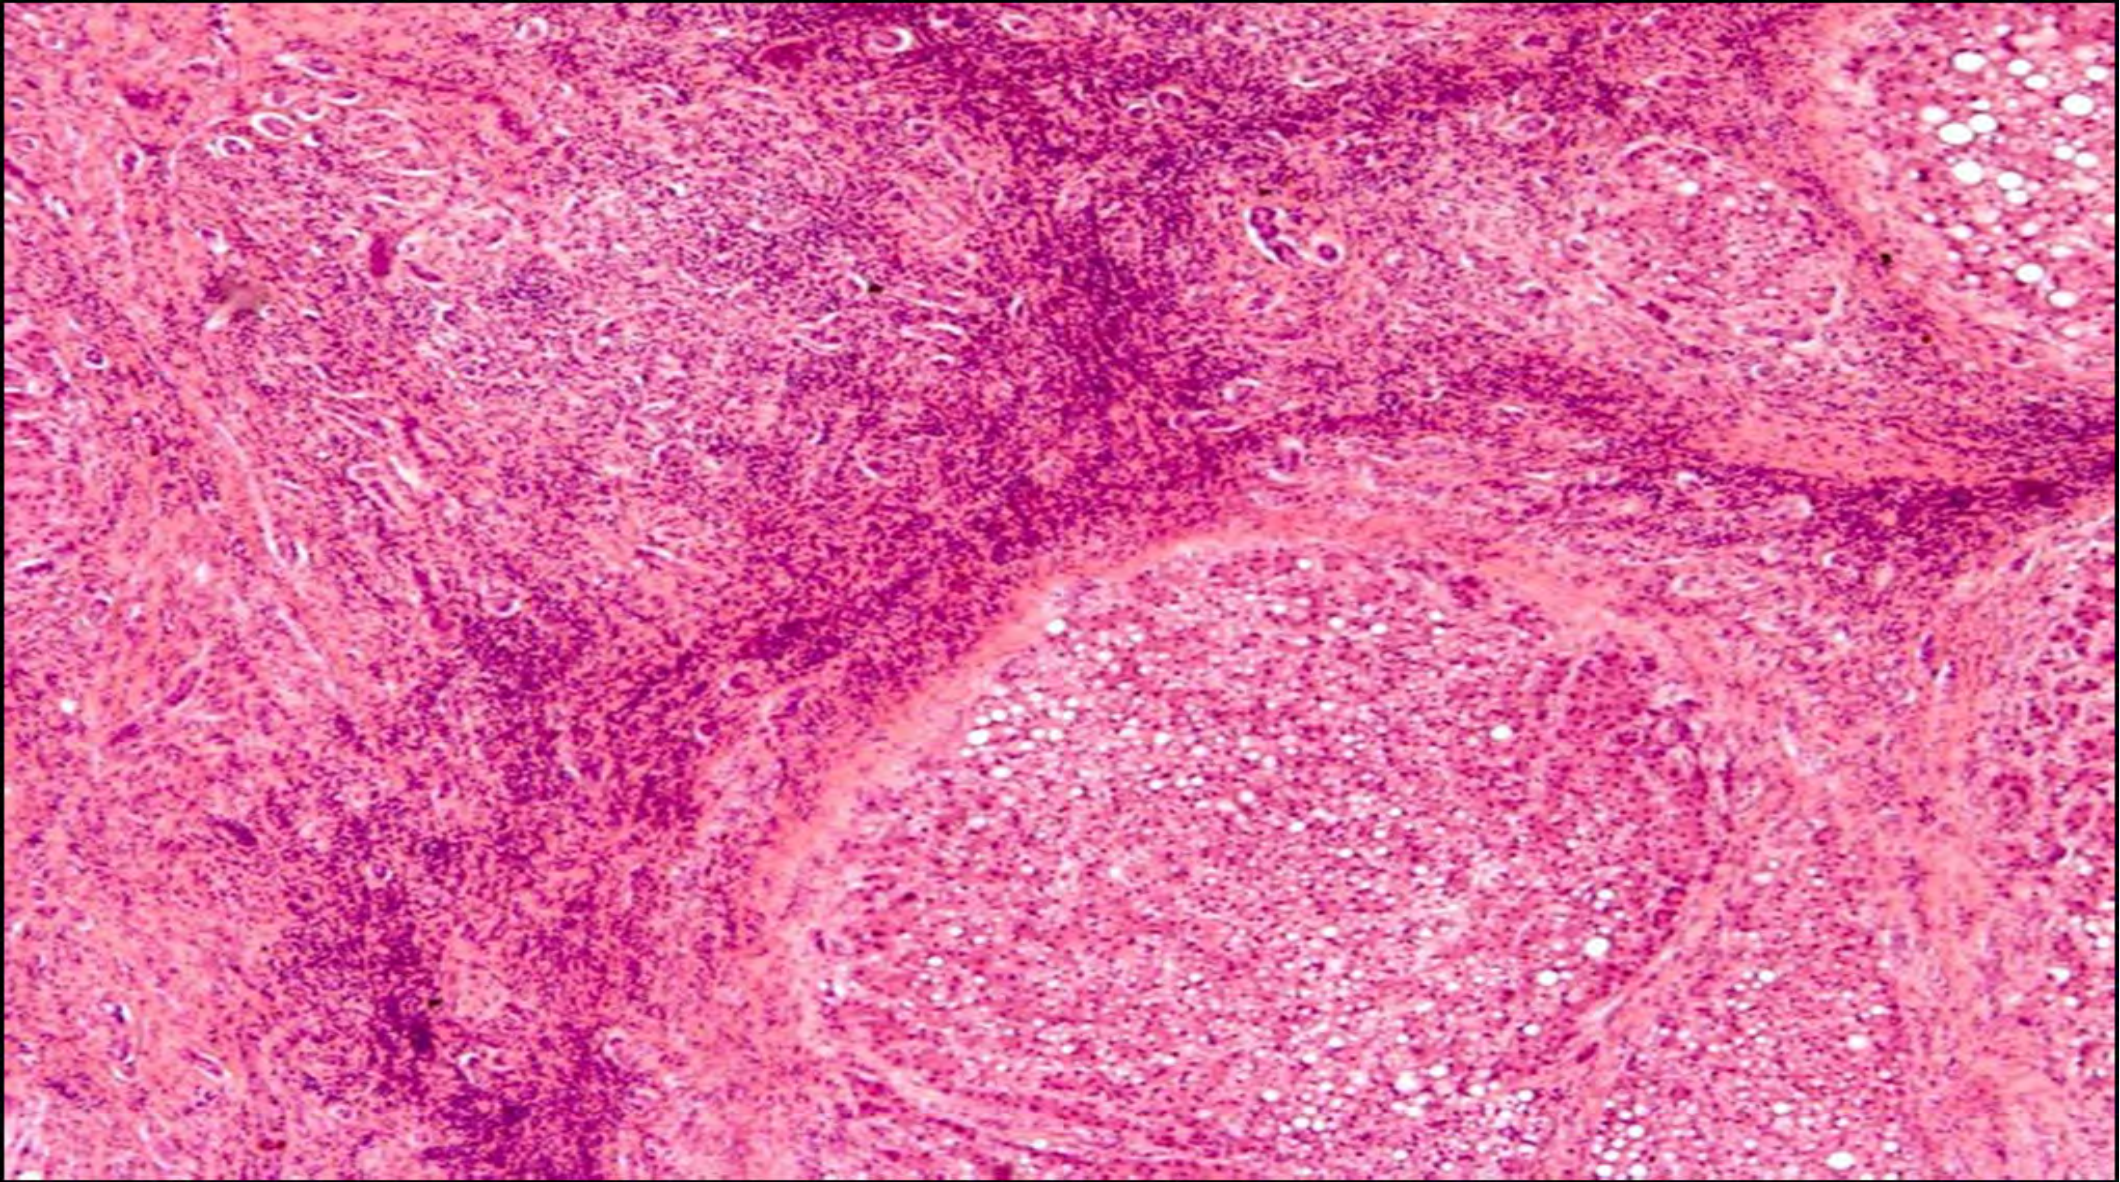

Recurrent verrucous endocarditis of the mitral valve

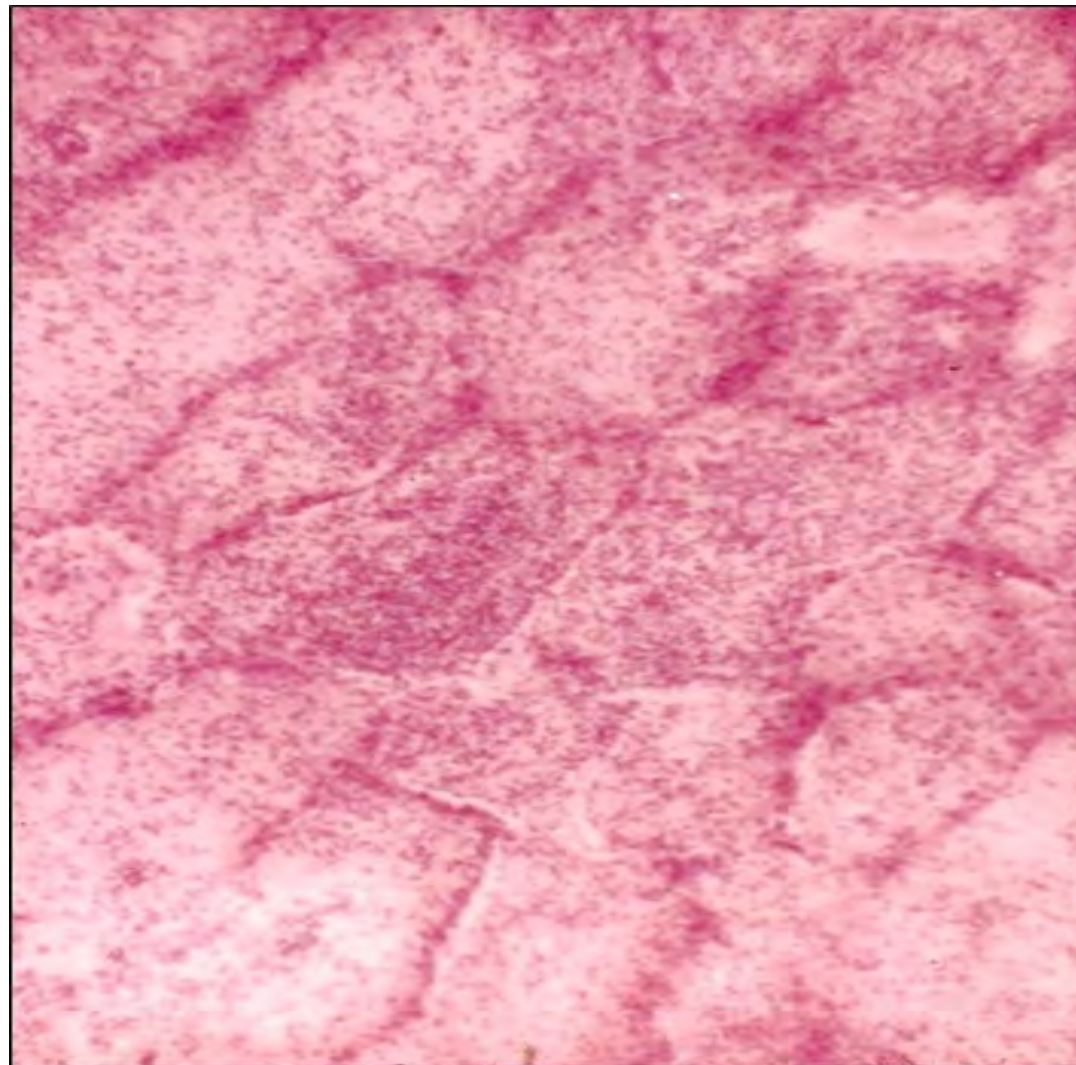

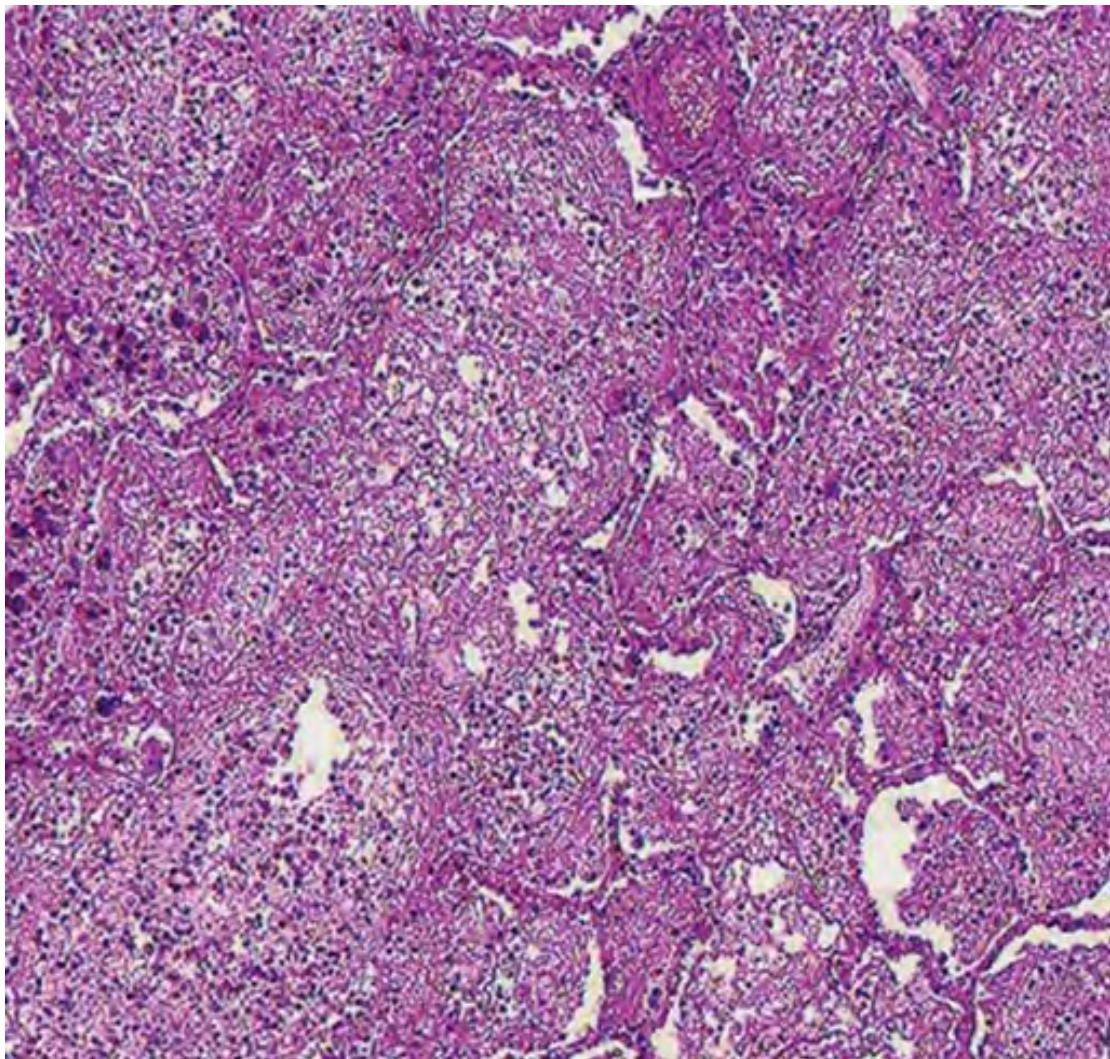

Polyposis-ulcerative endocarditis

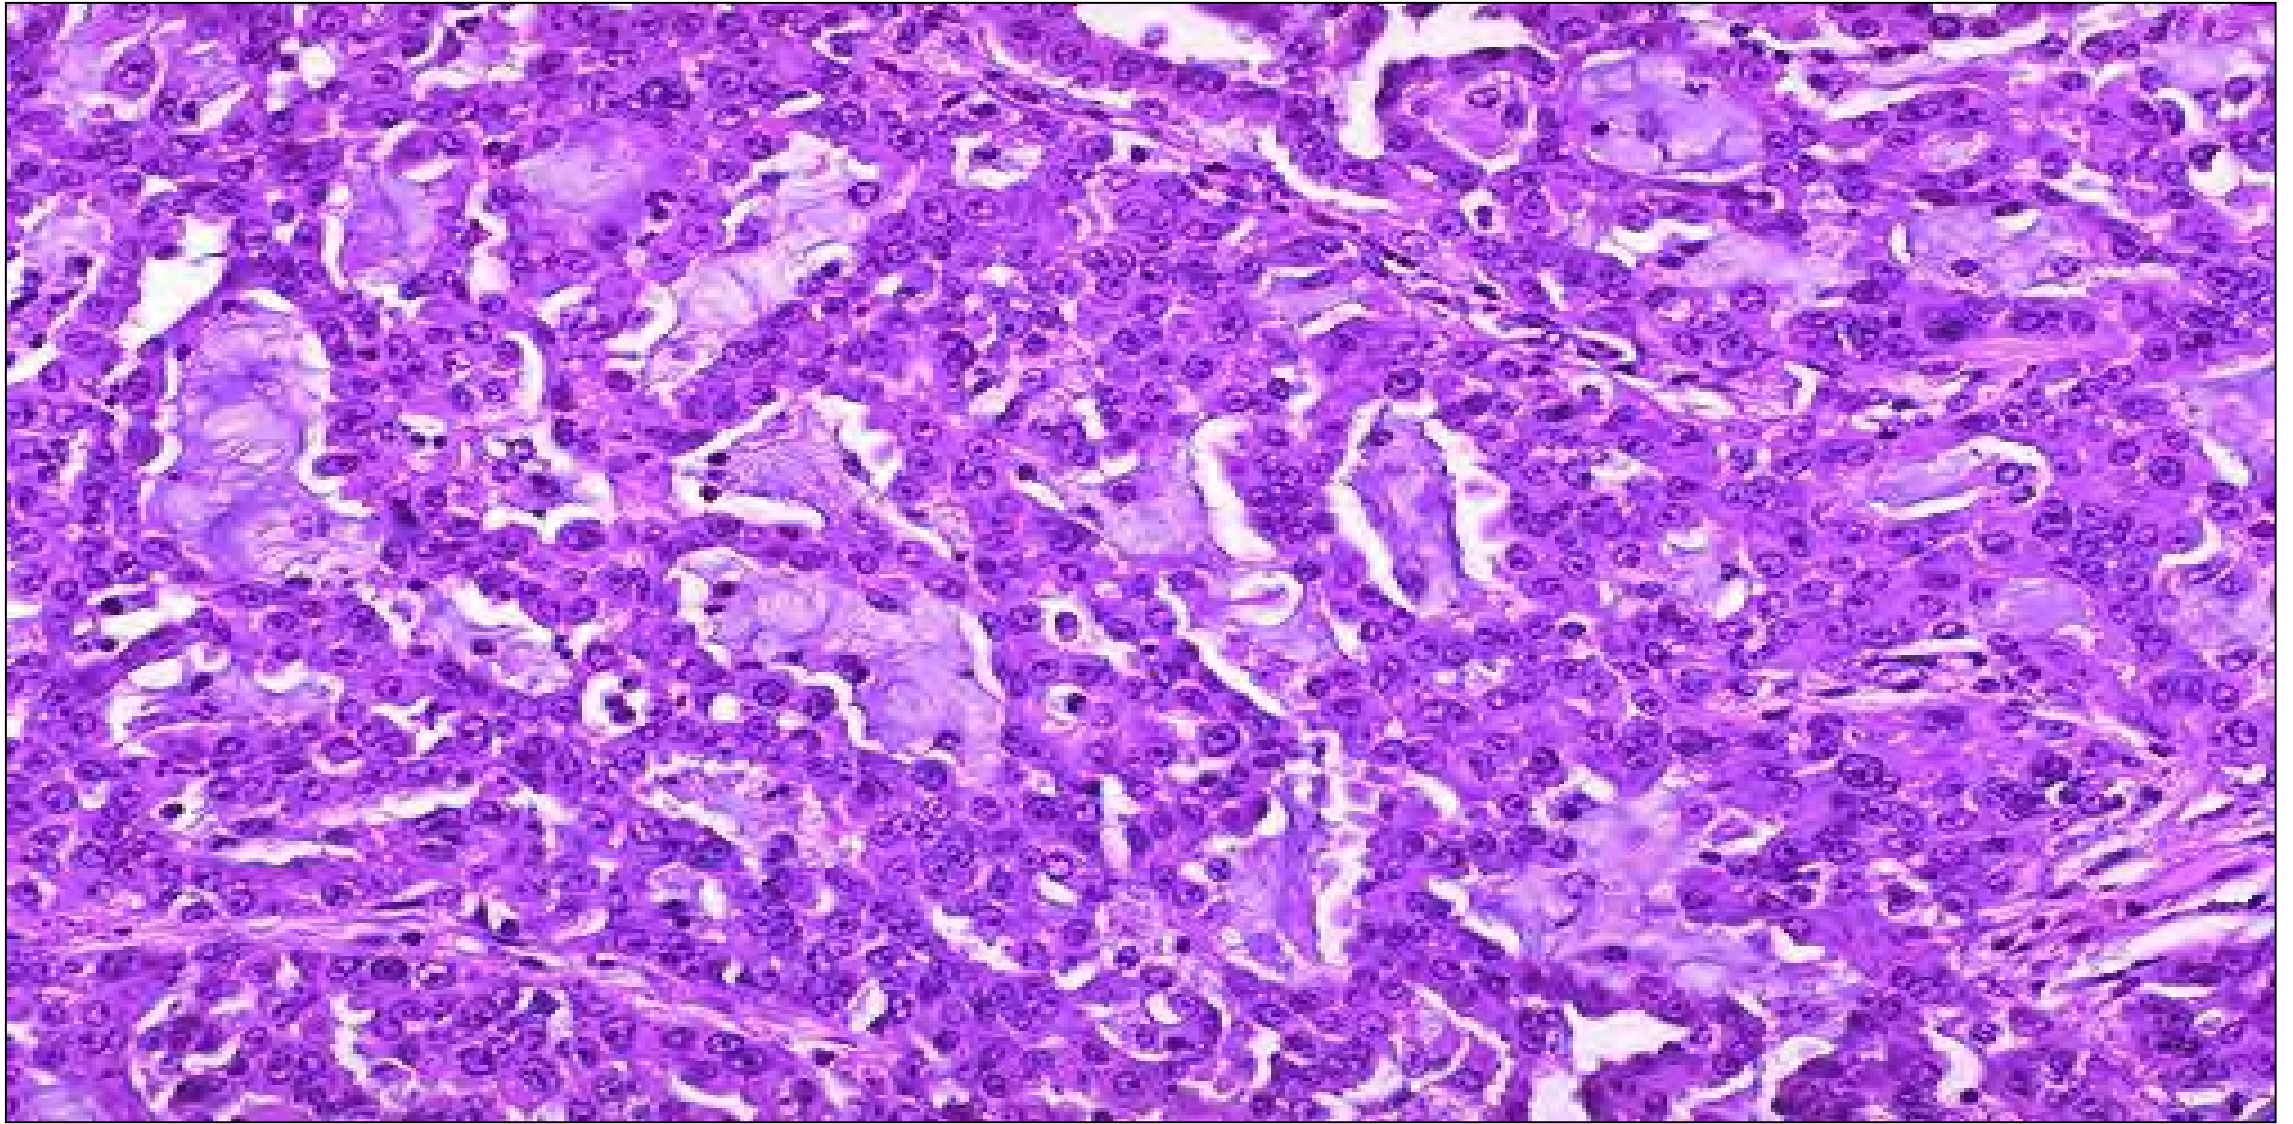

Phlegmonous-ulcerative appendicitis

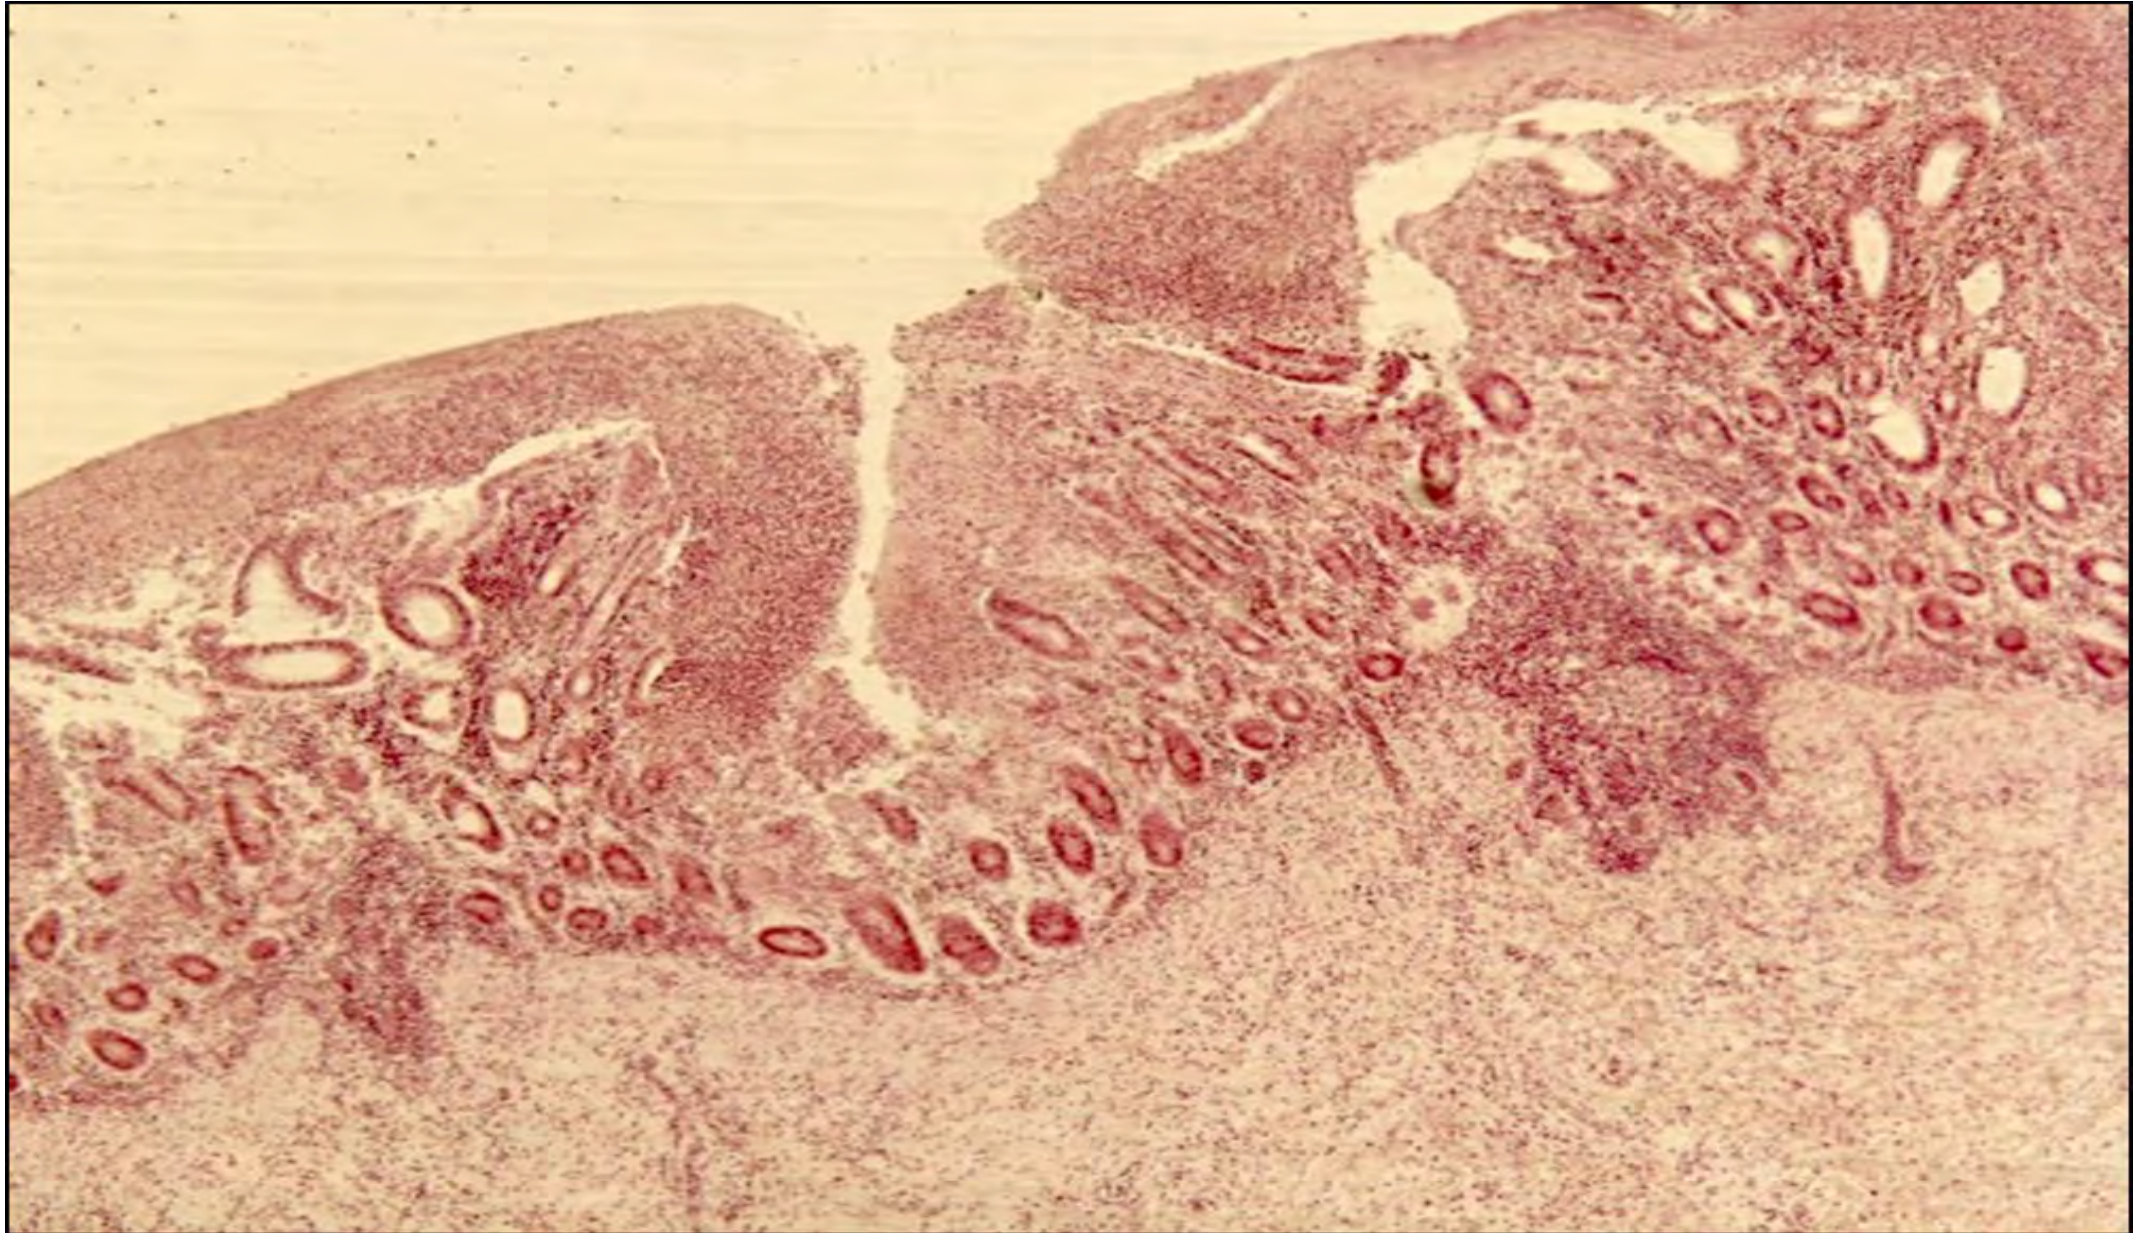

Portal cirrhosis of the liver

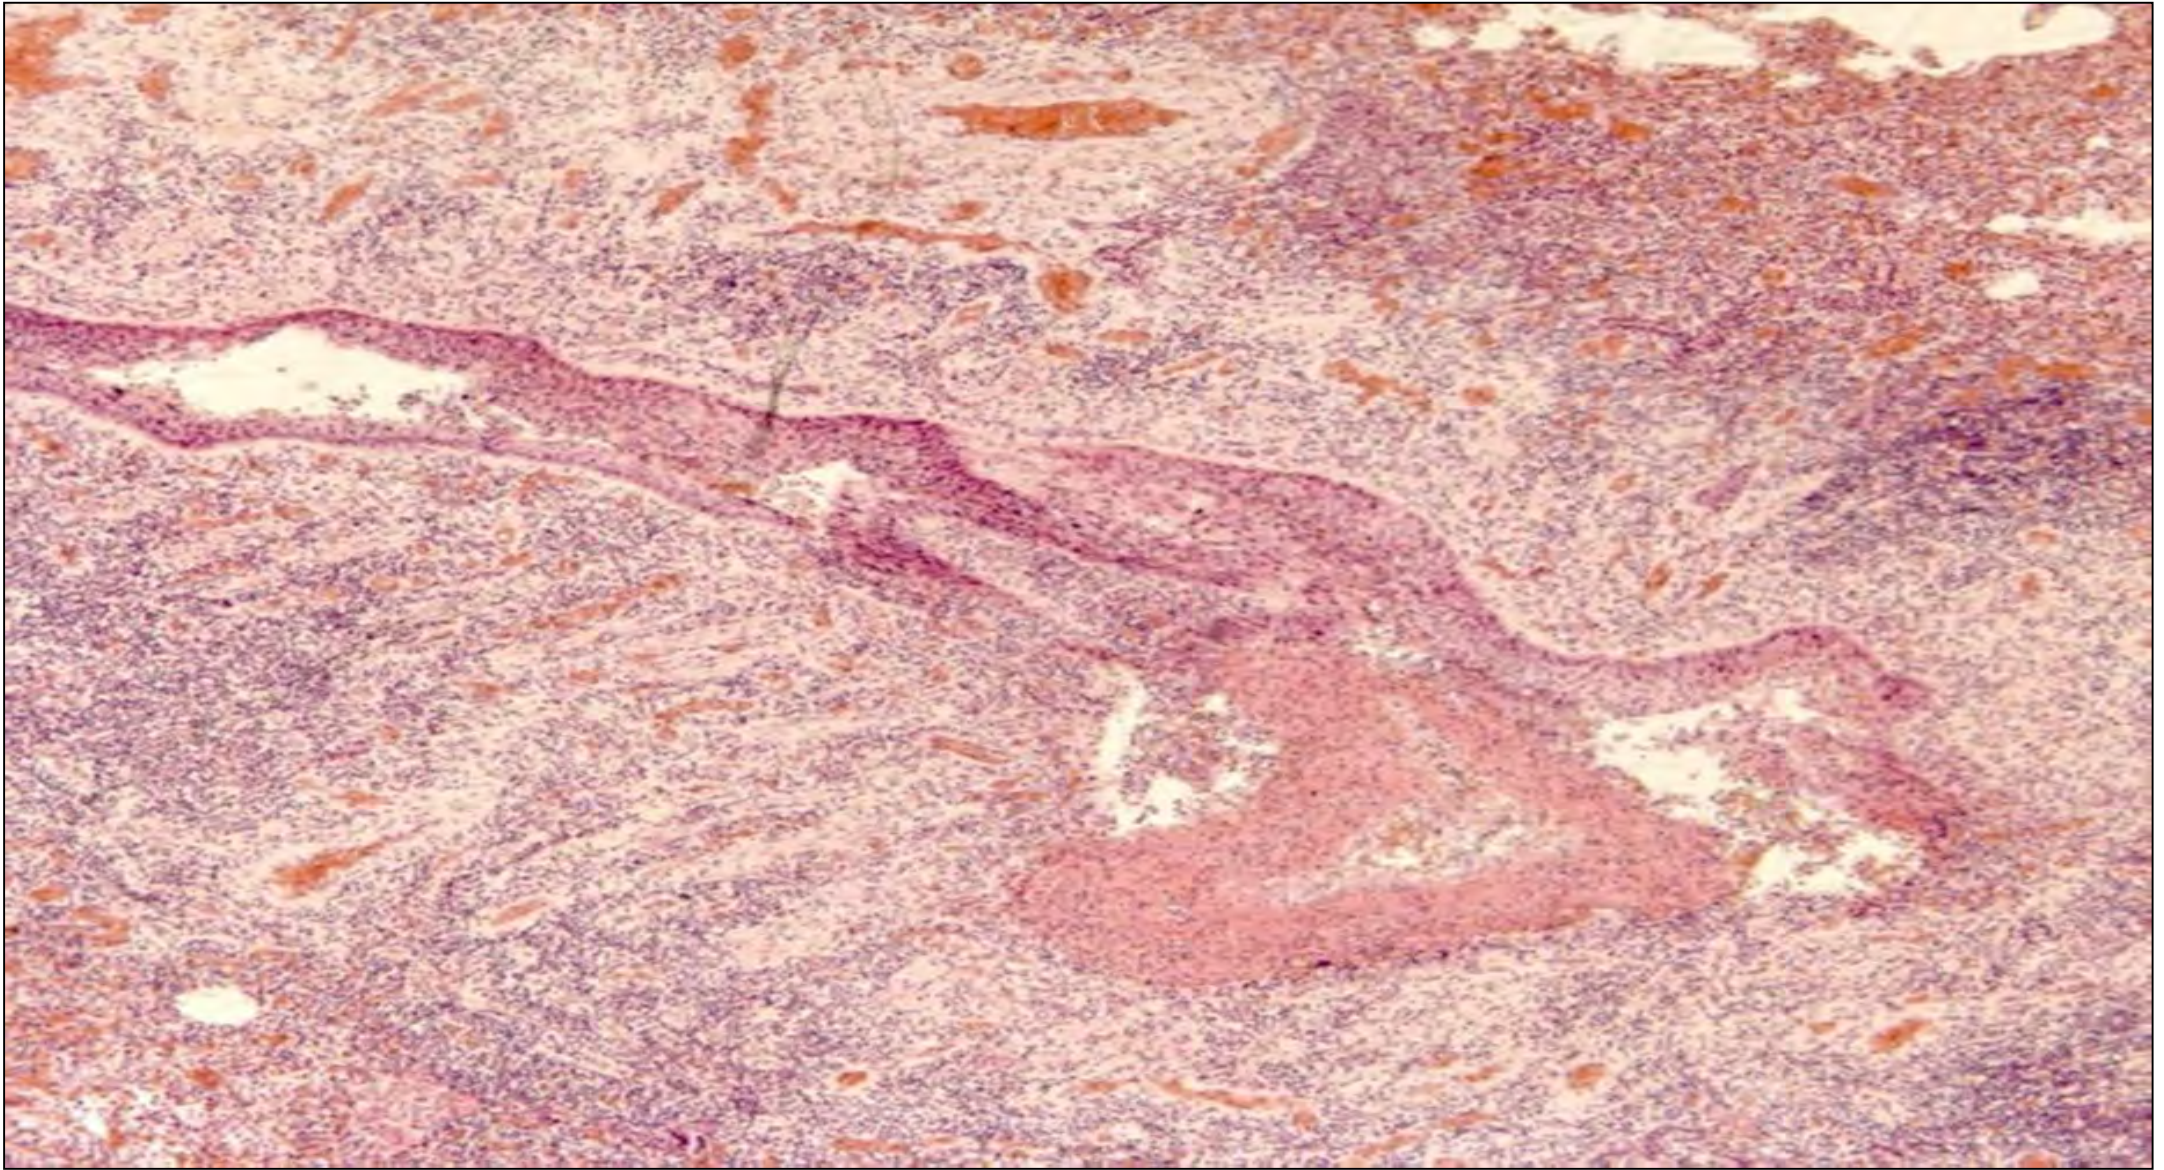

Croupous pneumonia

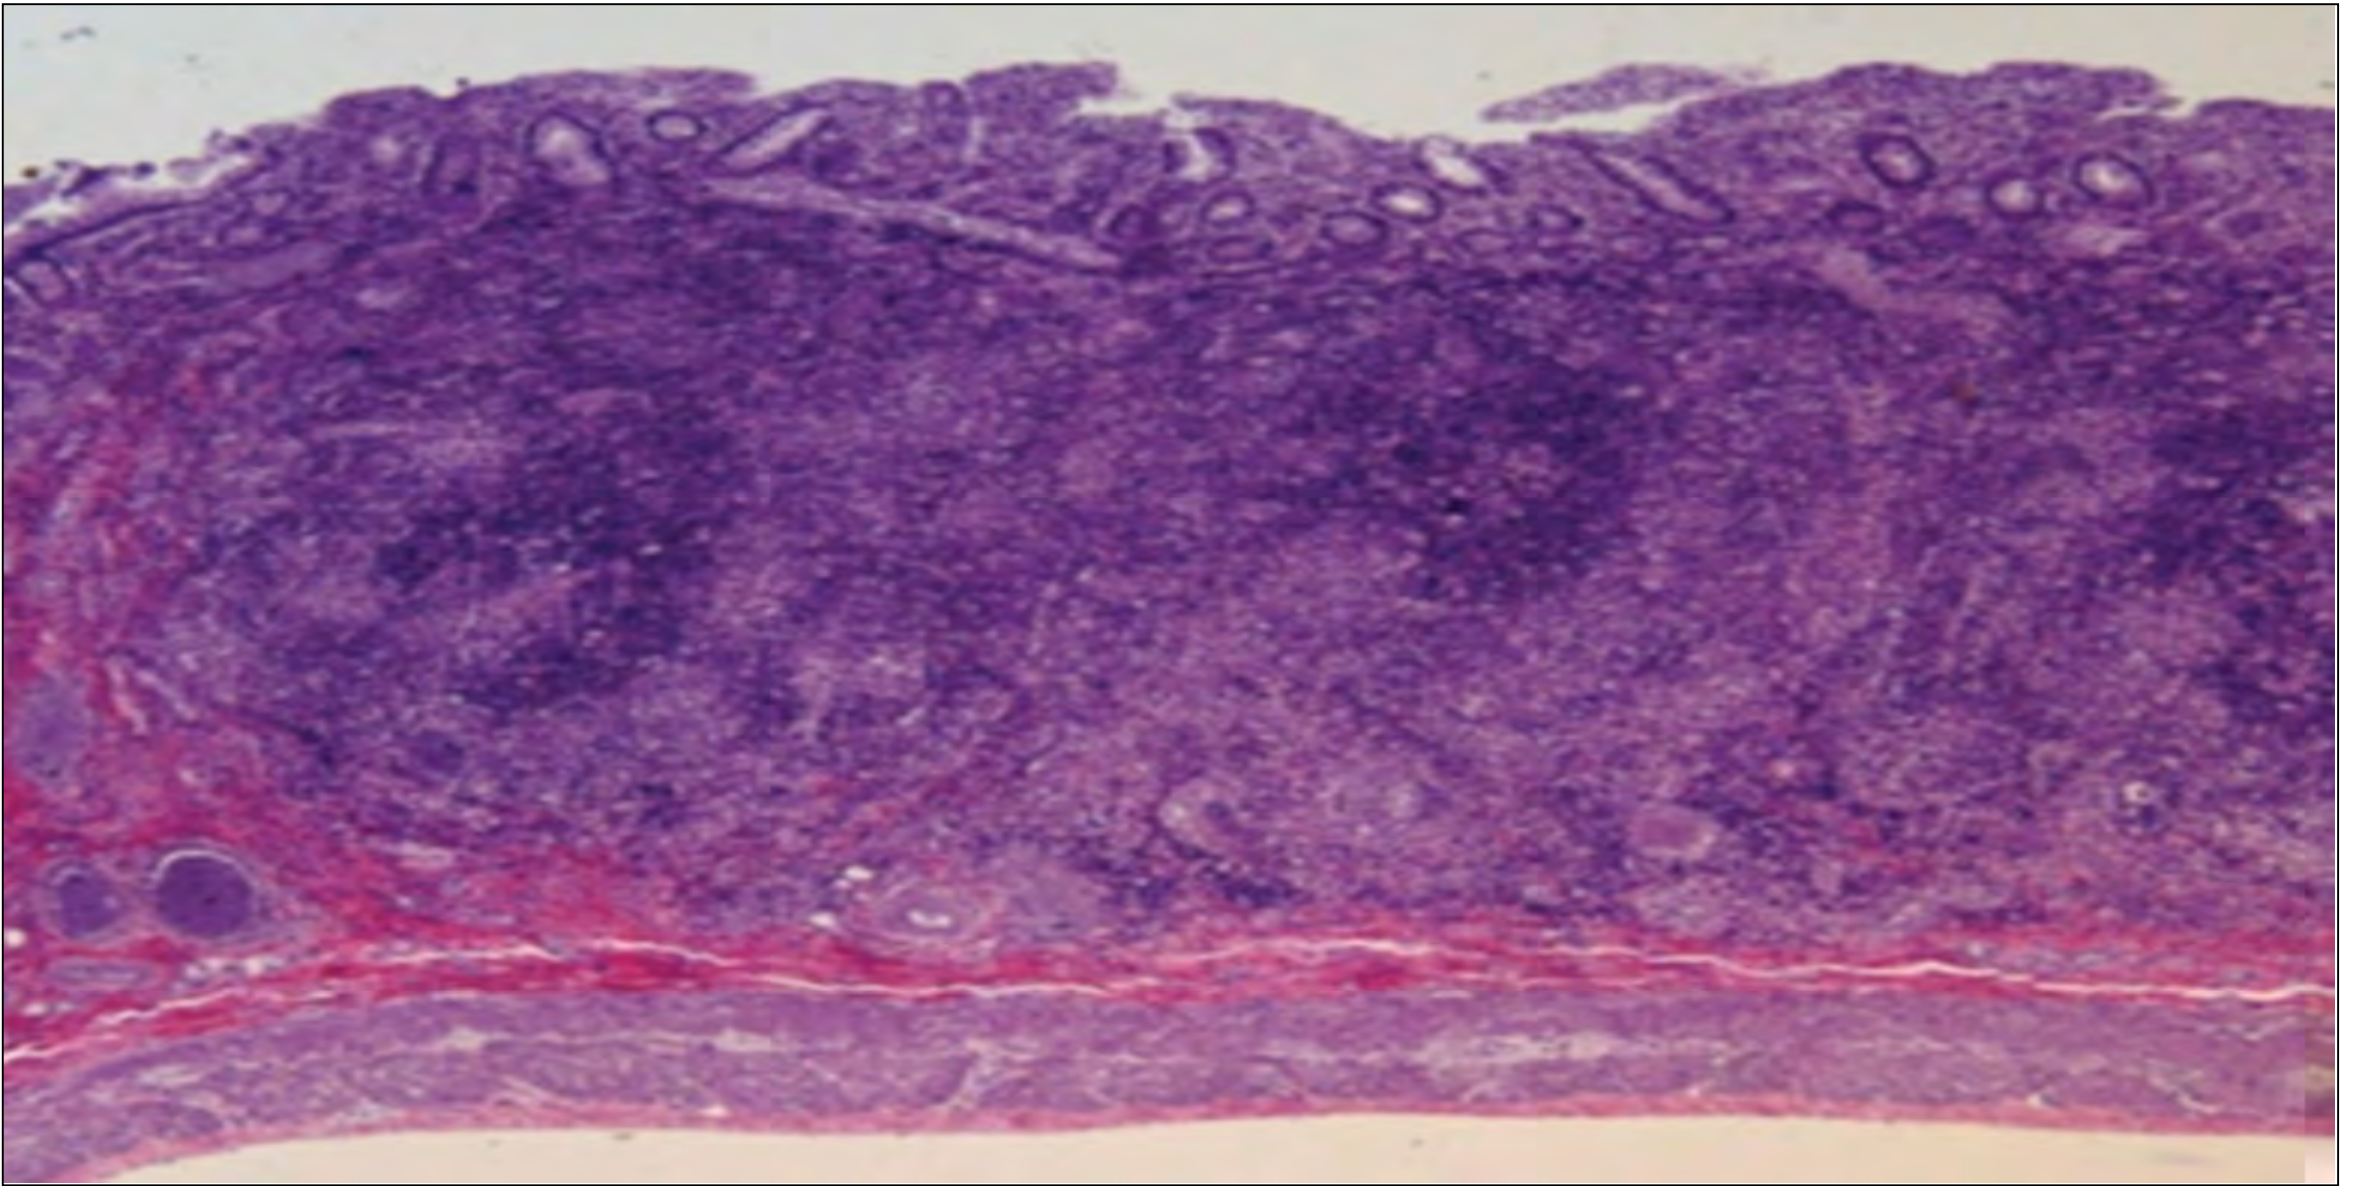

Adenocarcinoma of the colon

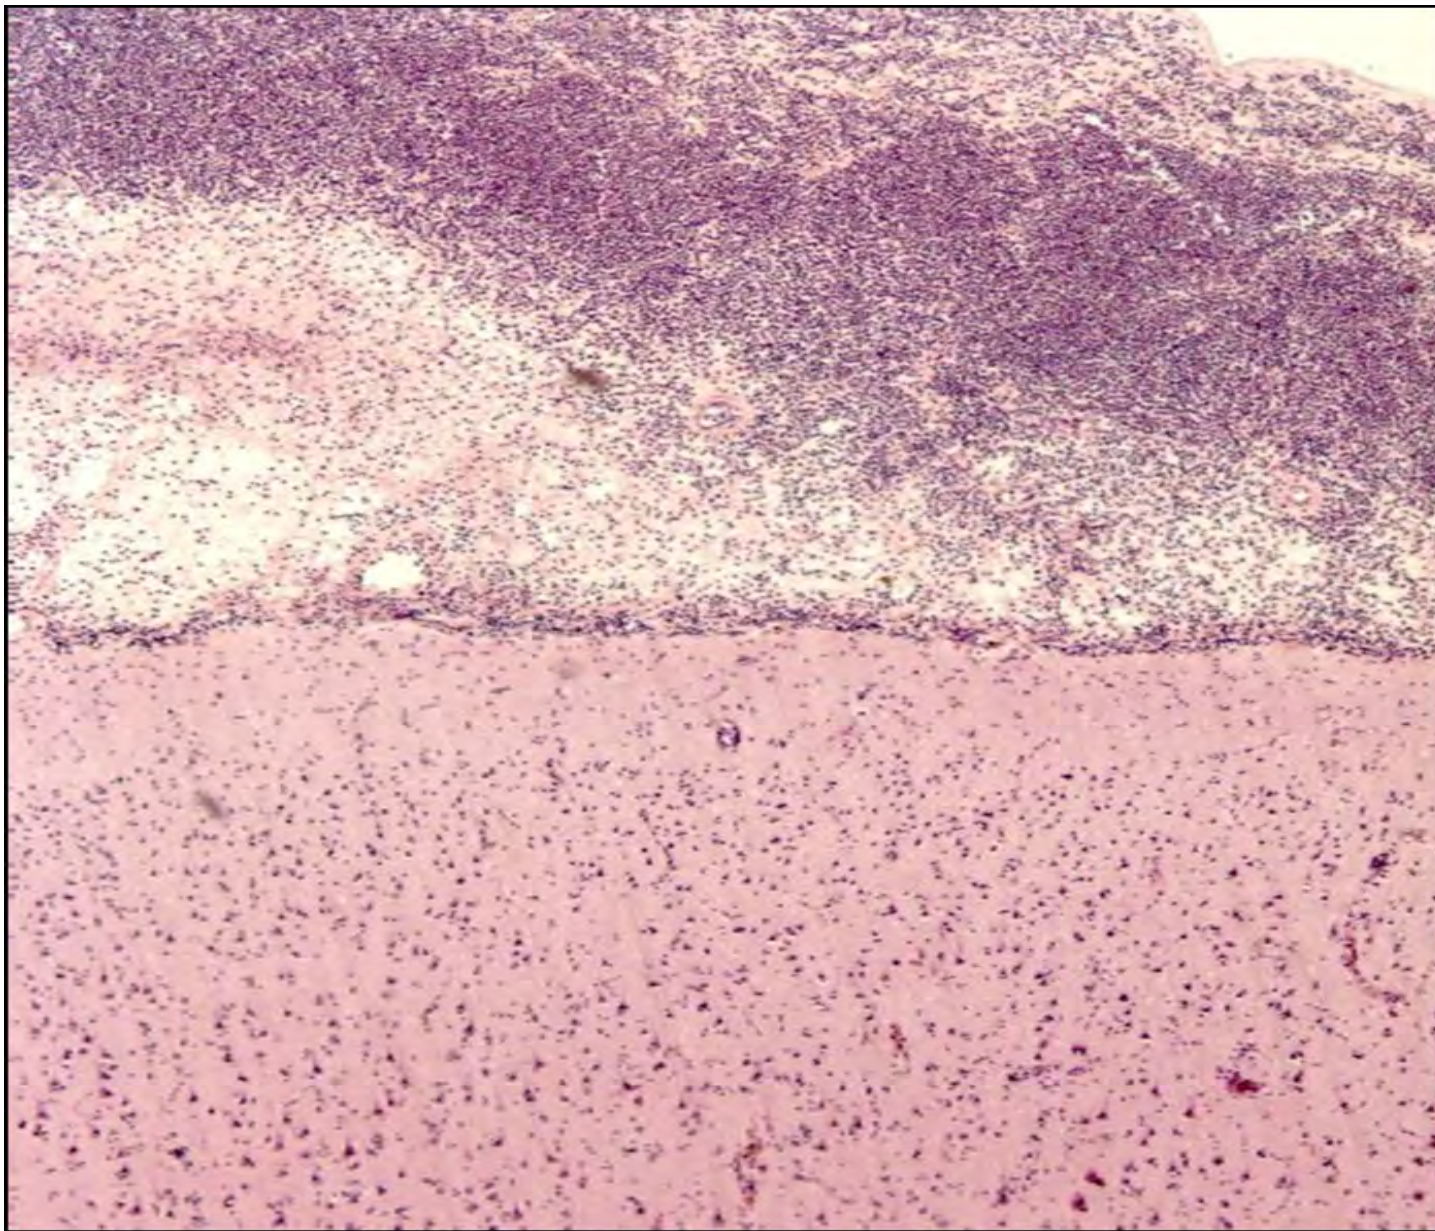

Diphtheritic-ulcerative colitis in dysentery

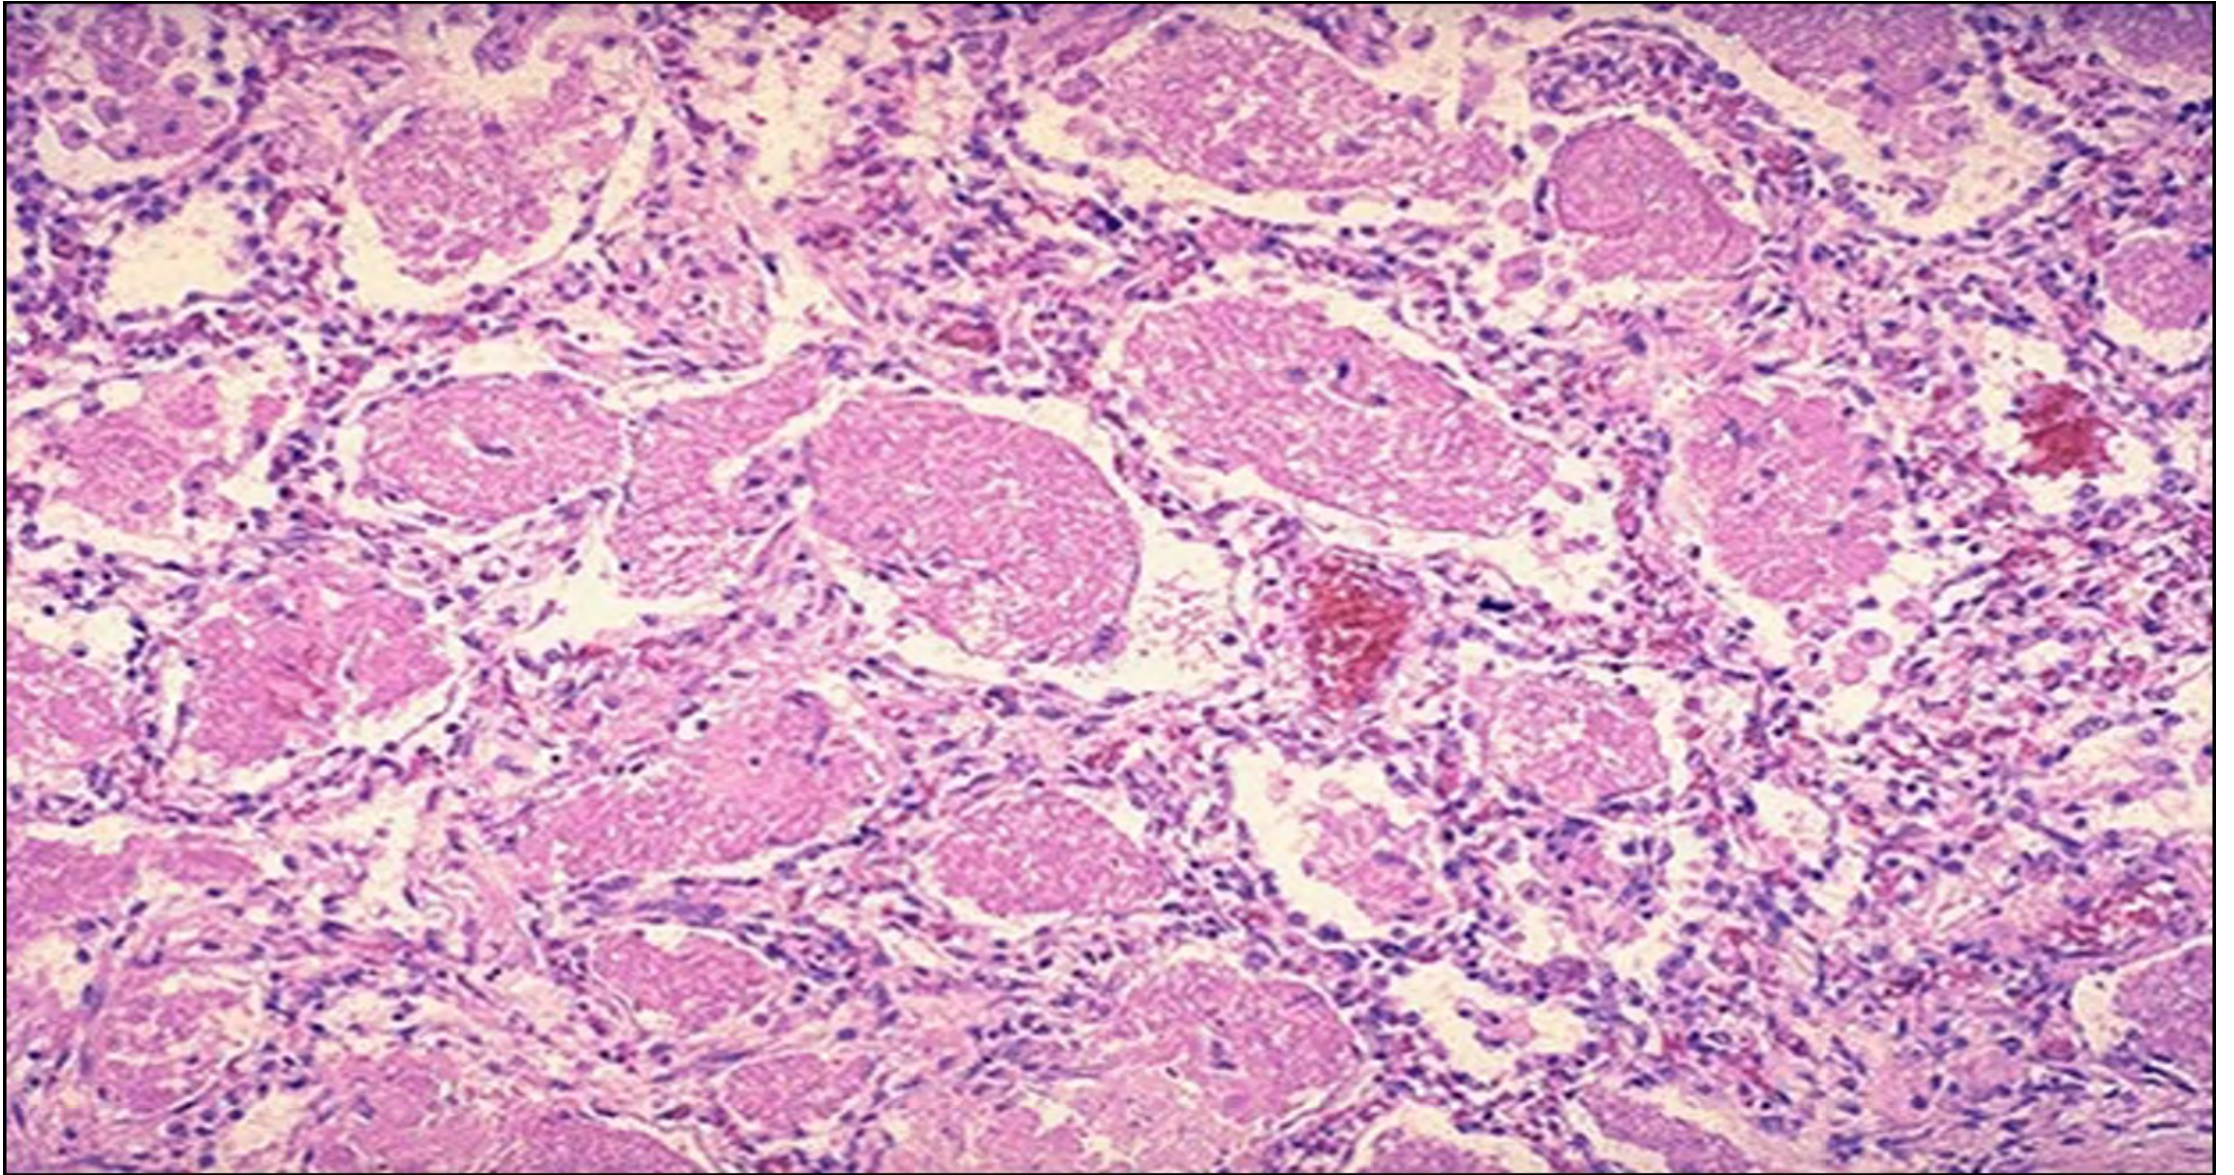

Chronic bronchitis with bronchiectasis

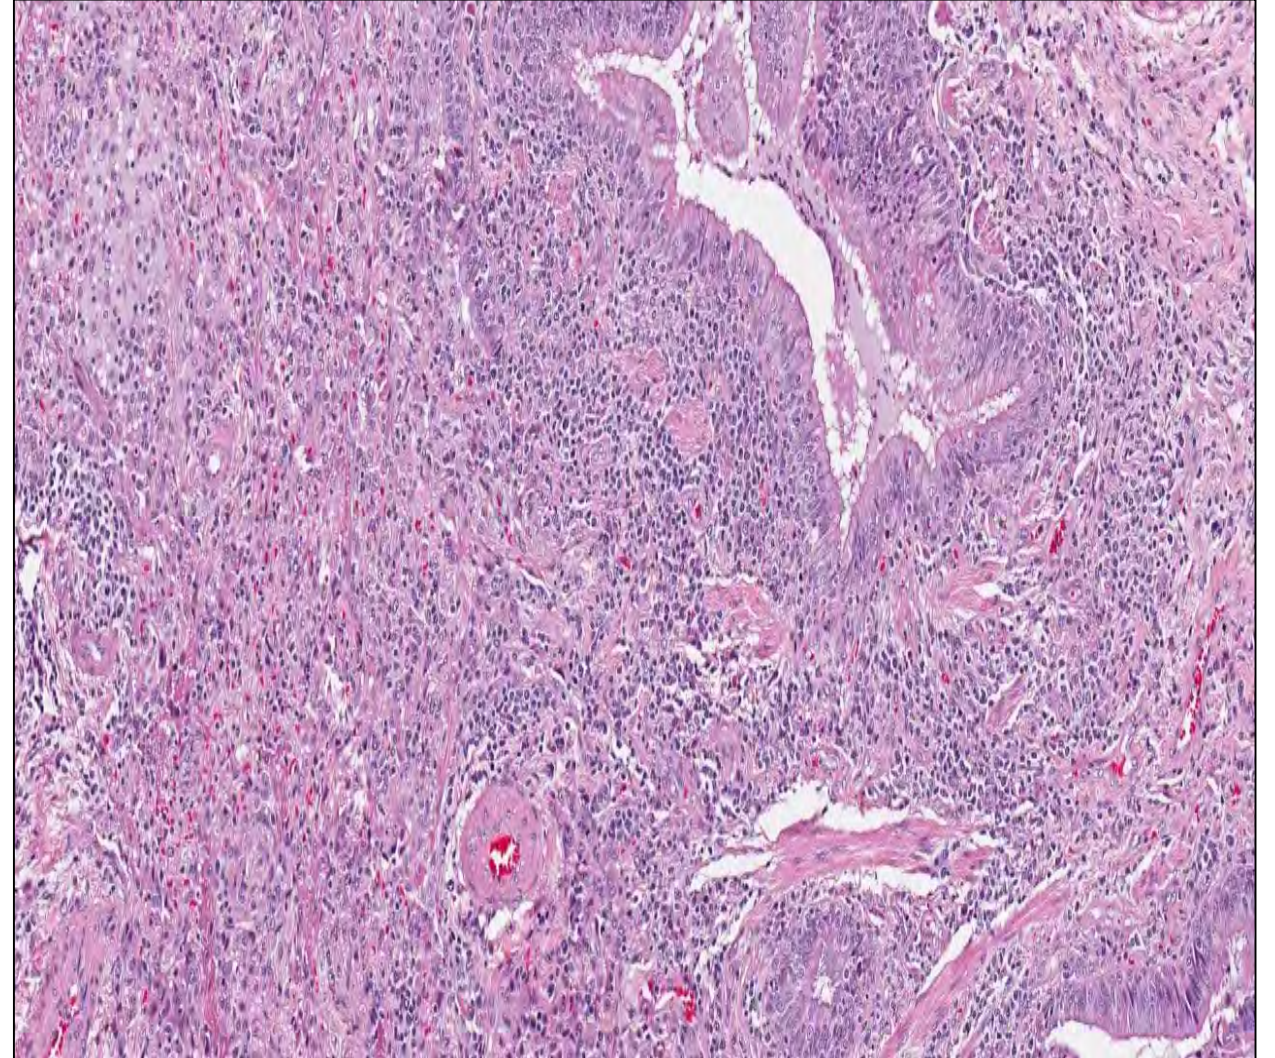

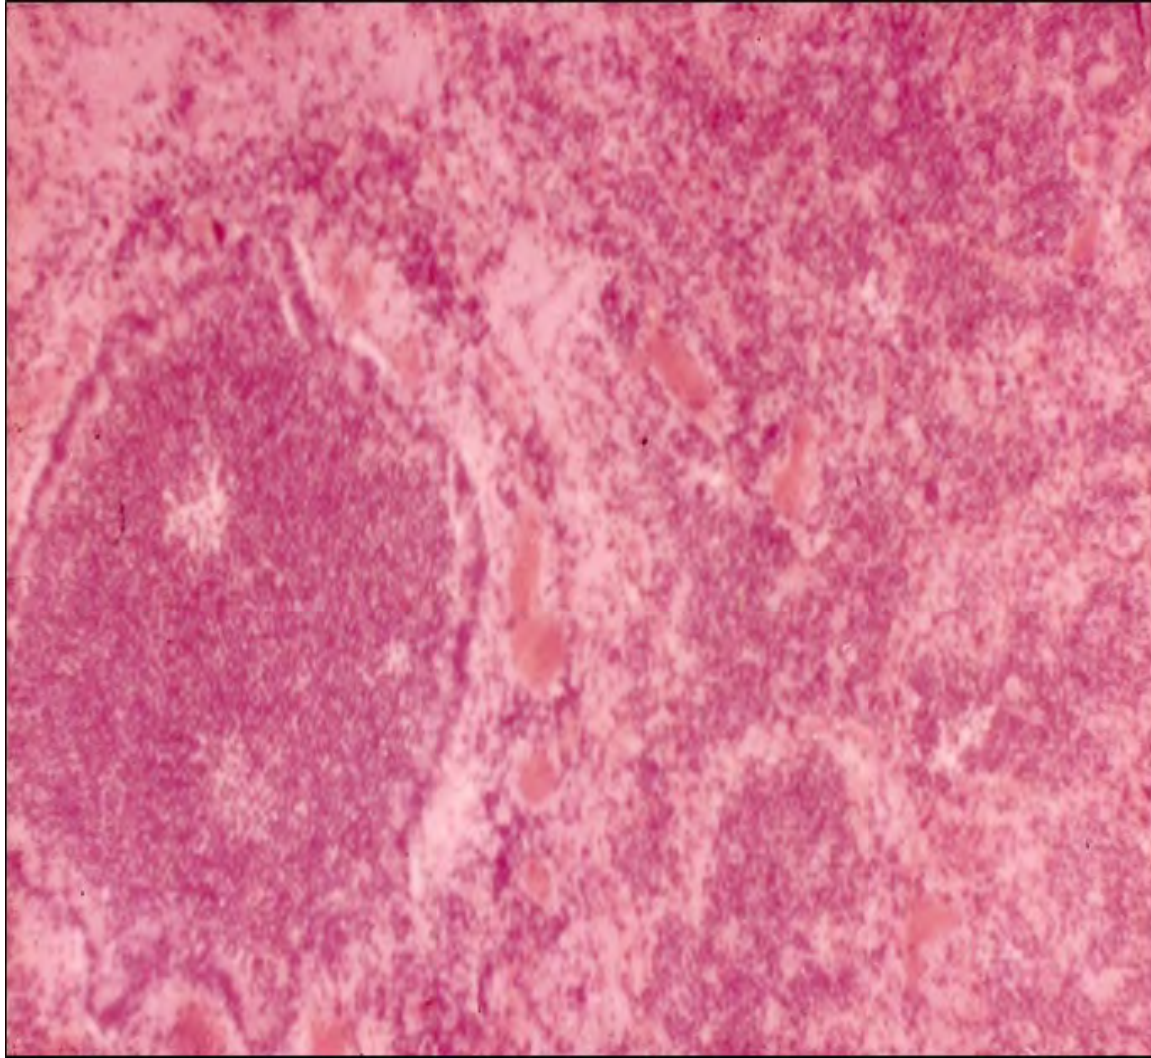

Brain-like swelling of Peyer's plaques in typhoid fever

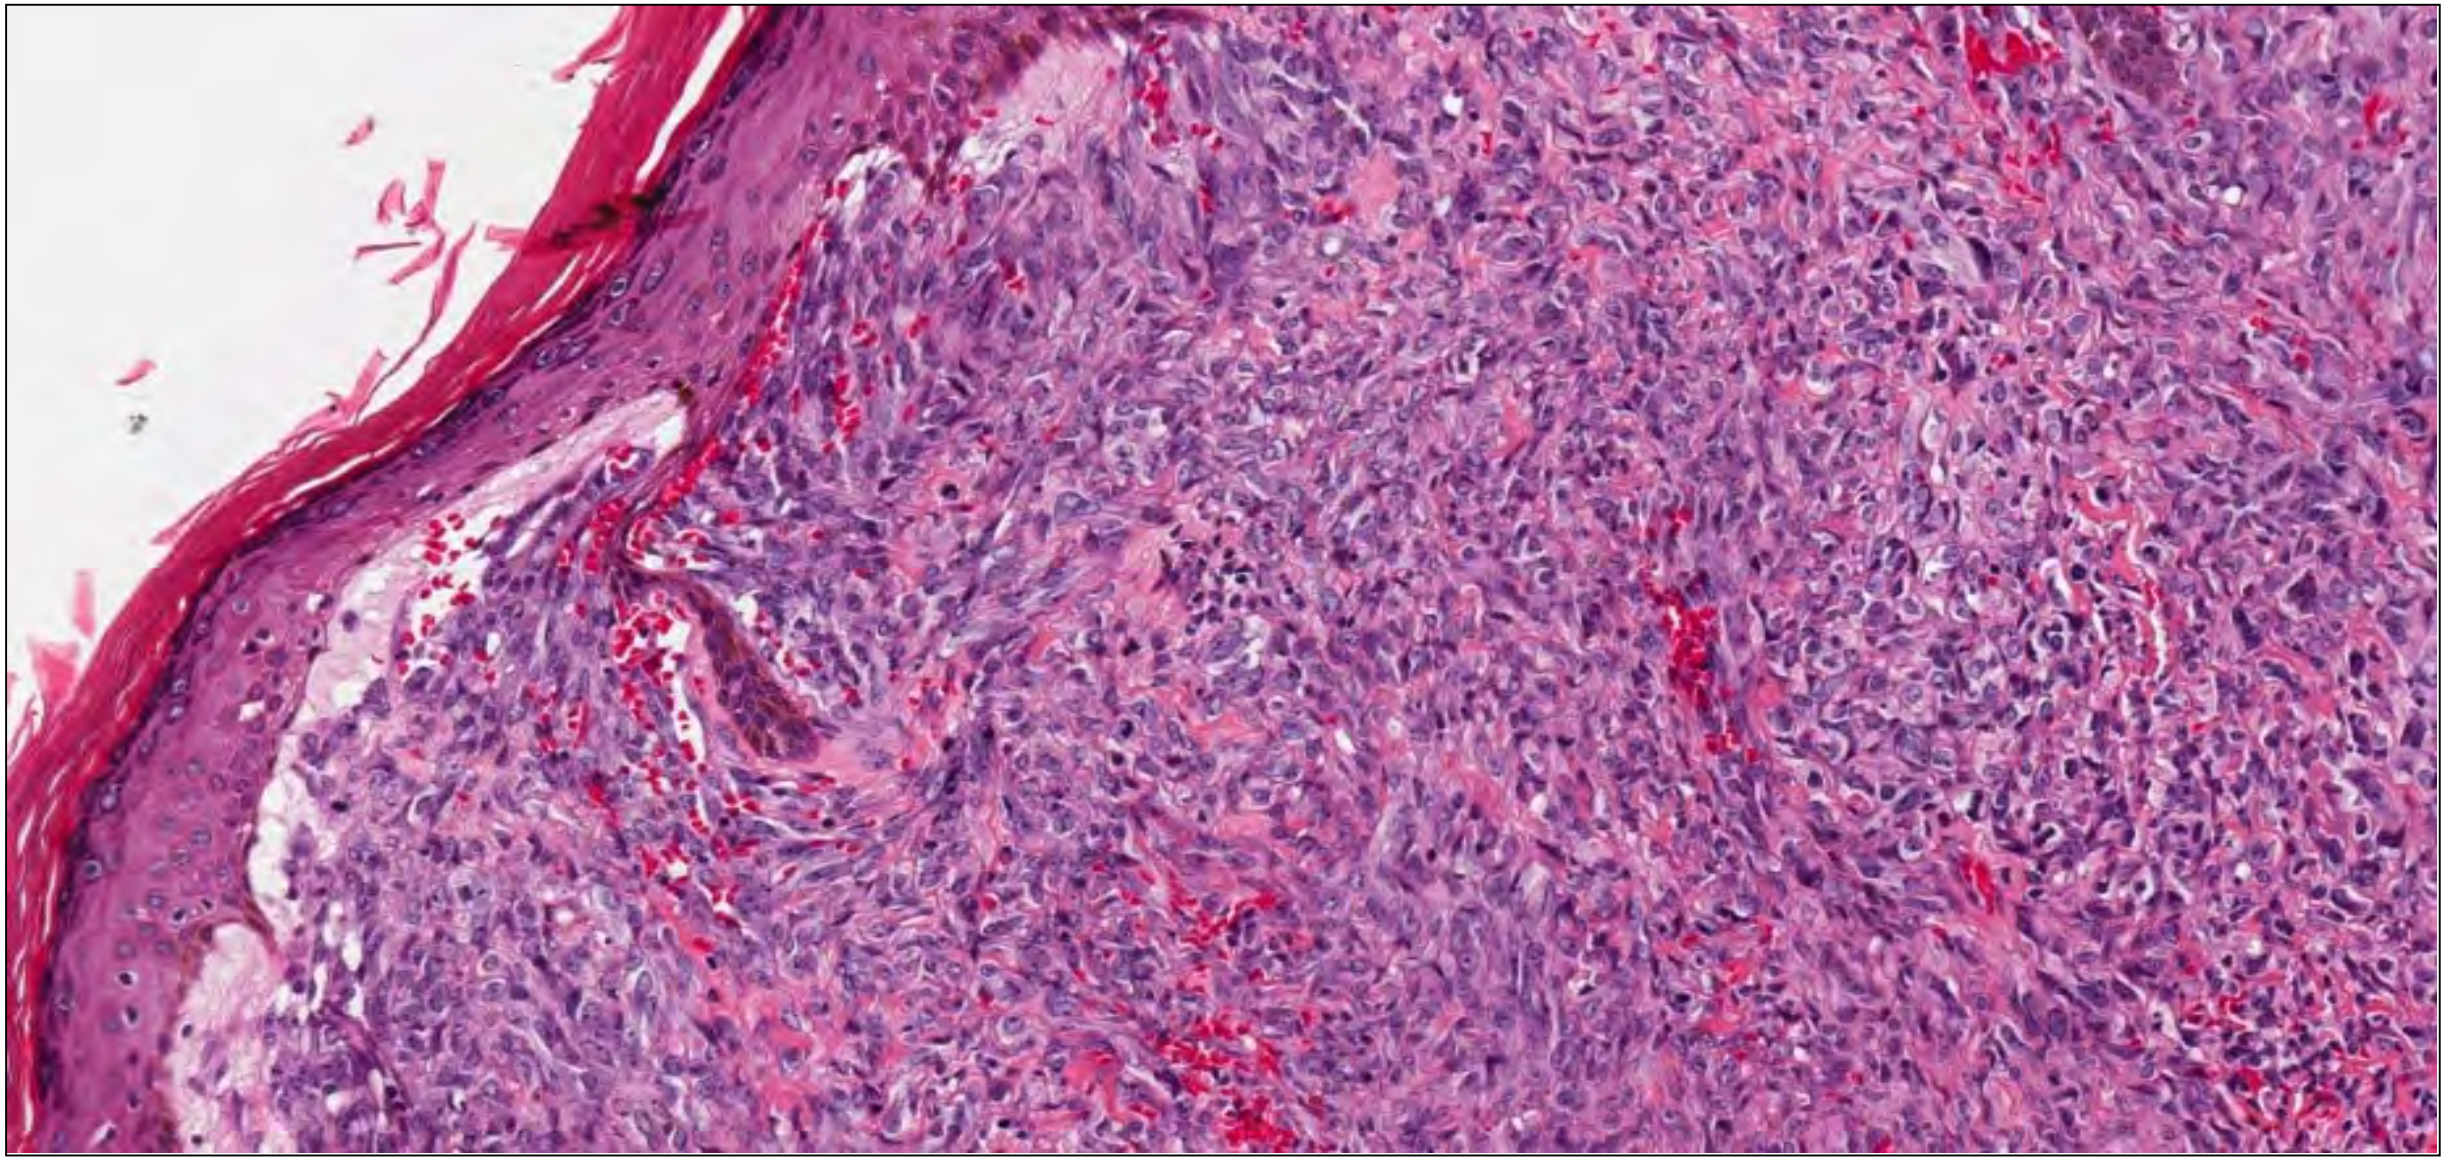

Purulent leptomeningitis

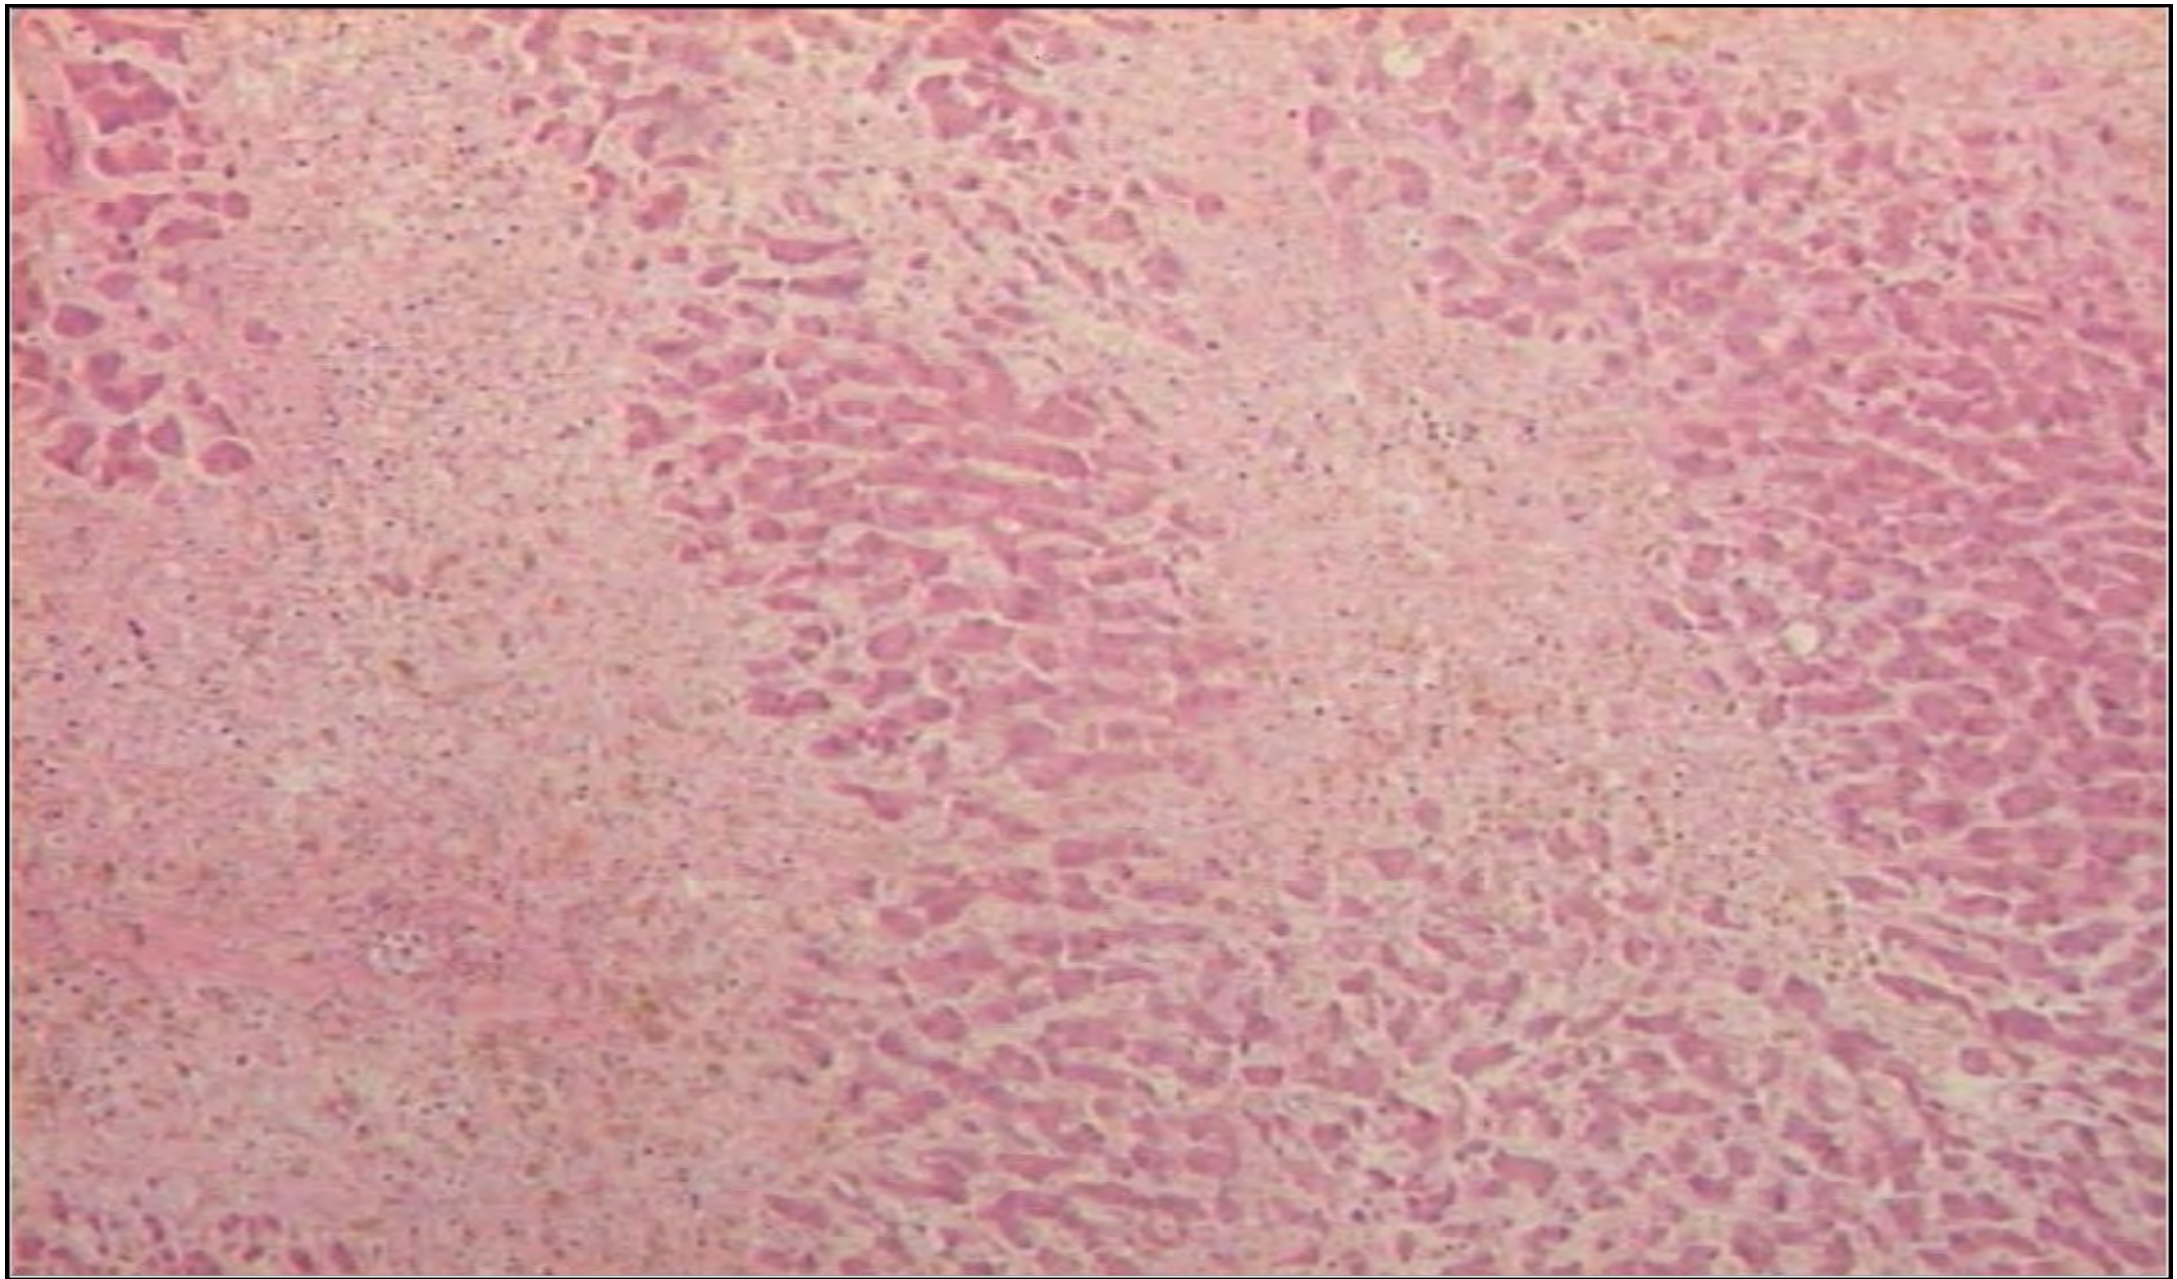

Pneumocystis carinii pneumonia

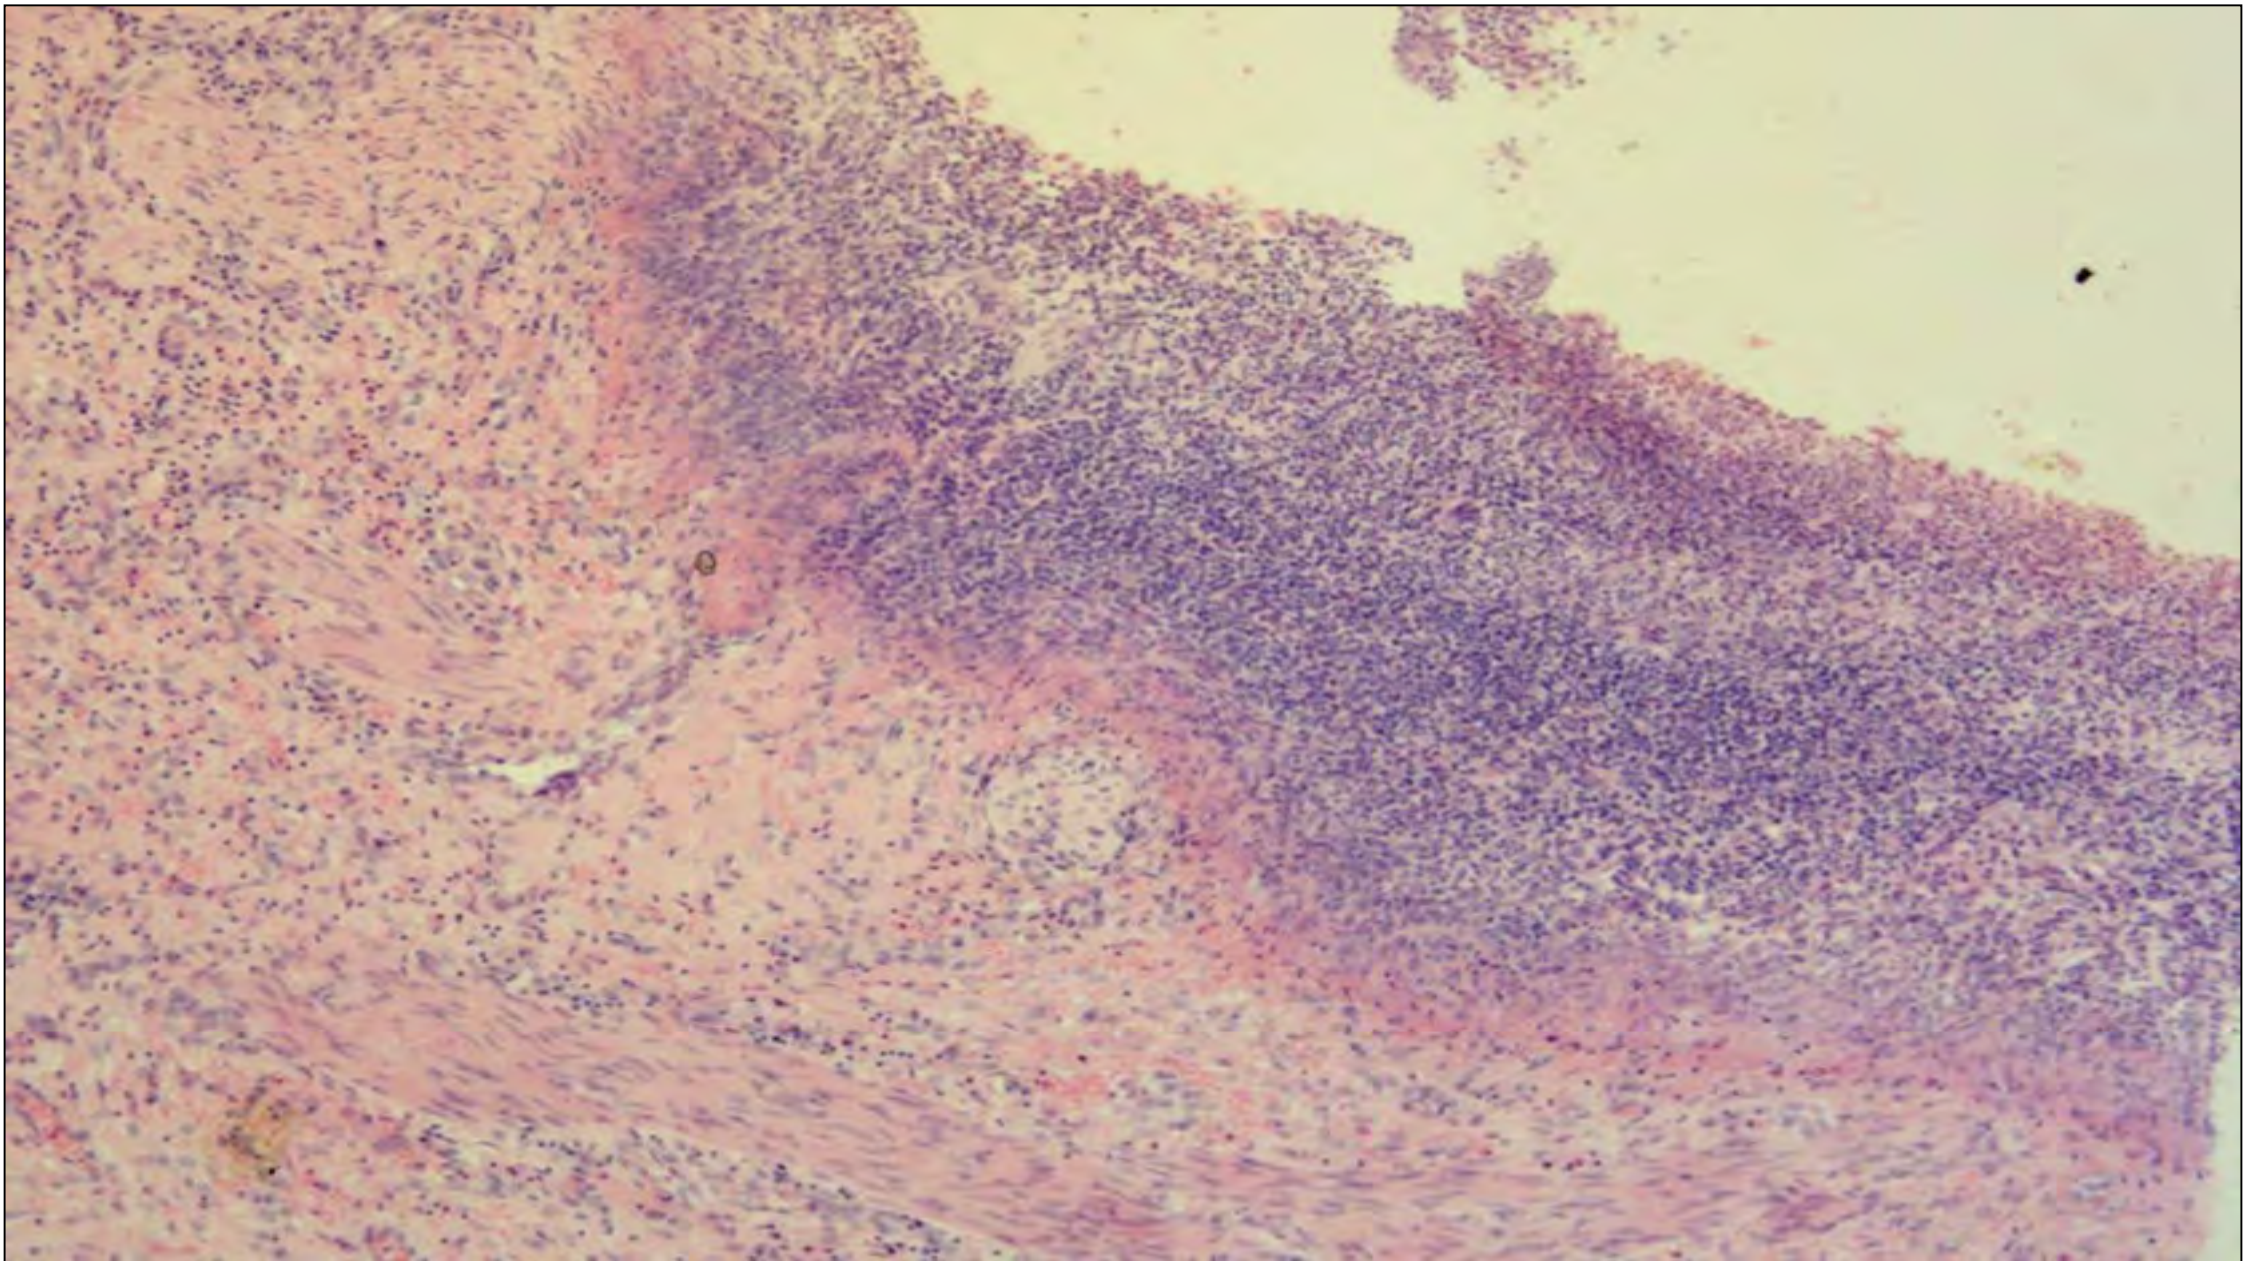

Bronchopneumonia

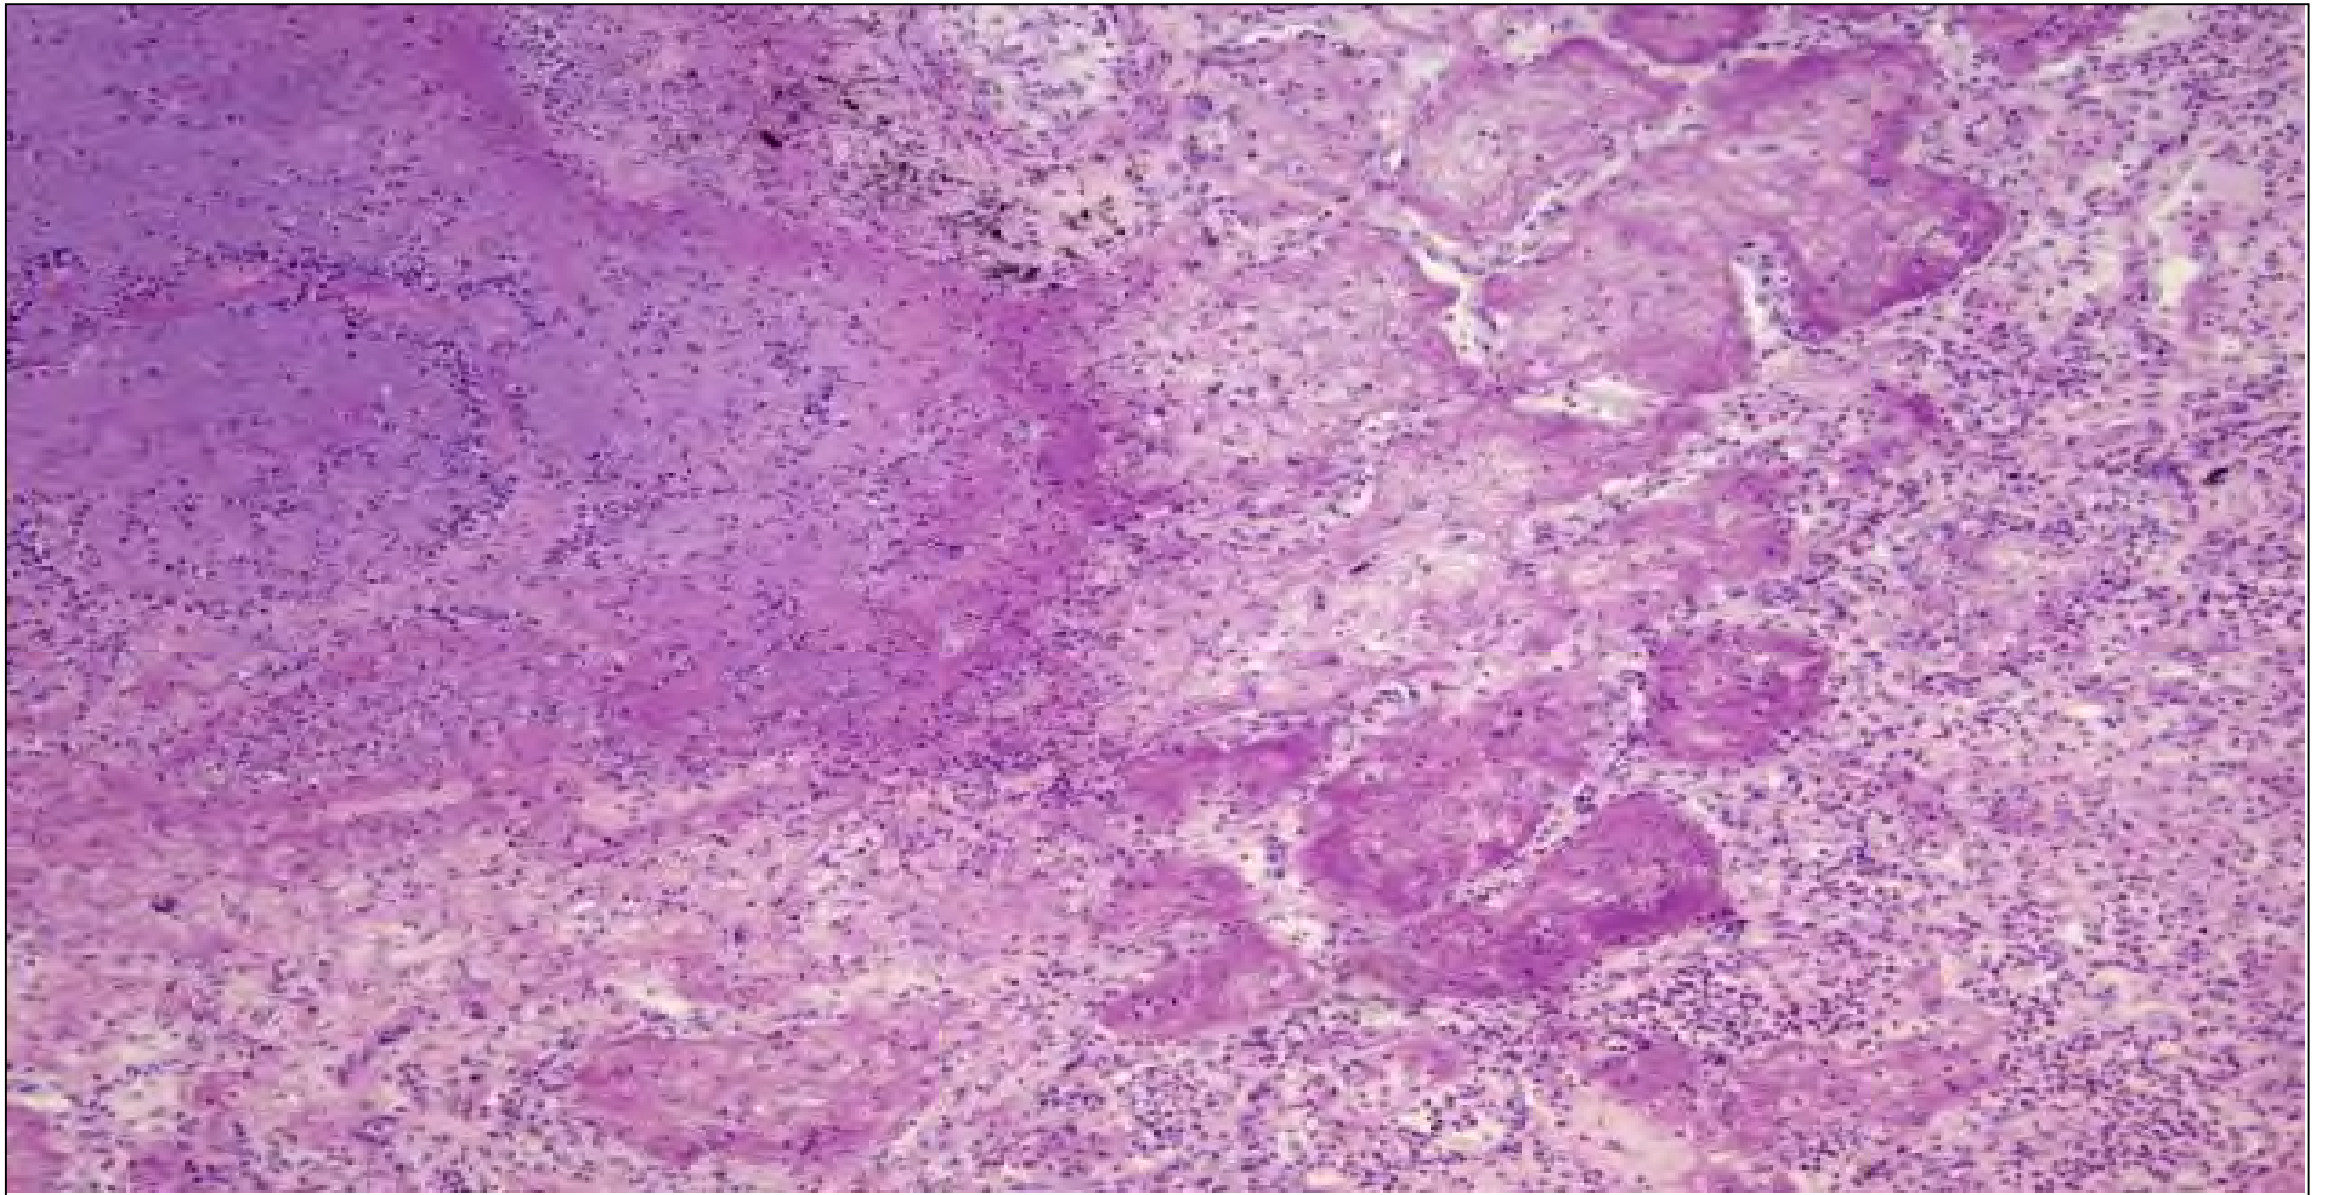

Kaposi's sarcoma

Massive hepatic necrosis

Chronic gastric ulcer (bottom)

Caseous pneumonia
